

INTERNATIONAL ELECTROTECHNICAL COMMISSION  
COMMISSION ÉLECTROTECHNIQUE INTERNATIONALE

**CISPR 16-4-2**  
Edition 2.0 2011-06  
Amendment 2: 2018-08

**CISPR 16-4-2**  
Édition 2.0 2011-06  
Amendement 2:2018-08

Specification for radio disturbance and immunity  
measuring apparatus  
and methods –

Part 4-2: Uncertainties, statistics and limit  
modelling – Measurement  
instrumentation uncertainty

Spécifications des méthodes et des appareils de  
mesure des perturbations  
radioélectriques et de l'immunité aux  
perturbations radioélectriques –

Partie 4-2: Incertitudes, statistiques et  
modélisation des limites – Incertitudes  
de mesure de l'instrumentation

**CORRIGENDUM 1**

Corrections to the French version appear after the English text.

Les corrections à la version française sont données après le texte anglais.

**Table B.8 – Conducted disturbances measurements from 150 kHz to 30 MHz using a 150  $\Omega$   $\Delta$ -AN**

Replace the existing values for the input quantity AN Impedance (CM) tolerances  $\delta Z_{AN-CM}$  as follows:

AN Impedance (CM) tolerances <sup>B26)</sup>	$\delta Z_{AN-CM}$	+5,37/-3,67	Triangular	1,84
--	--------------------	-------------	------------	------

Replace the existing values for the combined standard uncertainty  $u_c$  and the expanded uncertainty ( $U_{CISPR}$ )  $2 u_c$  as follows:

Combined standard uncertainty	$u_c$			2,93
Expanded uncertainty ( $U_{CISPR}$ )	$2 u_c$			5,86

**B.10 Rationale for the estimates of input quantities specific to the measurement method using a  $\Delta$ -AN**

Replace the existing second sentence in Superscript B26) as follows:

Taking the extremes of all combinations of the constrained AN CM impedance and the unconstrained EUT impedance the estimate of the correction  $\delta Z_{AN-CM}$  is zero with a deviation of +5,37/- 3,67 dB.
