

CORRIGENDUM

Correction du texte anglais seulement:

Page 15

Subclause 4.2.7, in A and B, instead of:

= range ...

read:

= amplitude ...

Page 16

*Remplacer la figure 1 par une nouvelle
figure 1 ci-jointe.*

Page 17

*Replace figure 1 by the new figure 1
attached.*

Page 18

*Paragraphe 4.4, sixième alinéa, deuxième
ligne, remplacer «L_R» par «L'_R»*

Page 19

*Subclause 4.4, sixth paragraph, second
line, replace "L_R" by "L'_R"*

Page 20

*Paragraphe 4.5.1, deuxième alinéa, au lieu
de:*

La consommation de vie L'₁ + L'₂ ...

lire:

La consommation de vie L₁ + L₂ ...

Page 21

*Subclause 4.5.1, second paragraph,
instead of:*

The resulting consumption L'₁ + L'₂ ...

read:

The resulting consumption L₁ + L₂ ...

Puis, troisième alinéa, au lieu de:

... et on calcule L₁ et L'₂, ...

lire:

... et on calcule L'₁ et L'₂, ...

Then, third paragraph, instead of:

... and L₁ and L'₂ are calculated, ...

read:

... and L'₁ and L'₂ are calculated, ...

Et au dernier alinéa, au lieu de:

La valeur de t ...

lire:

La valeur de t₂ ...

And in last paragraph, instead of:

The value of t ...

read:

The value of t₂ ...

Page 25

Remplacer la formule:

$$L = L + \int_0^{t_n} e^{\frac{\ln 2}{\theta_d} (\Delta \theta_{wh}^t - \theta_c)} dt$$

par la formule suivante:

$$L = L + \int_0^{t_n} e^{\frac{\ln 2}{\theta_d} (\Delta \theta_{wh}^t + \theta_{ad} - \theta_c)} dt$$

Pages 32 à 43

Remplacer les courbes existantes par les nouvelles courbes ci-jointes.

Page 27

Replace the formula:

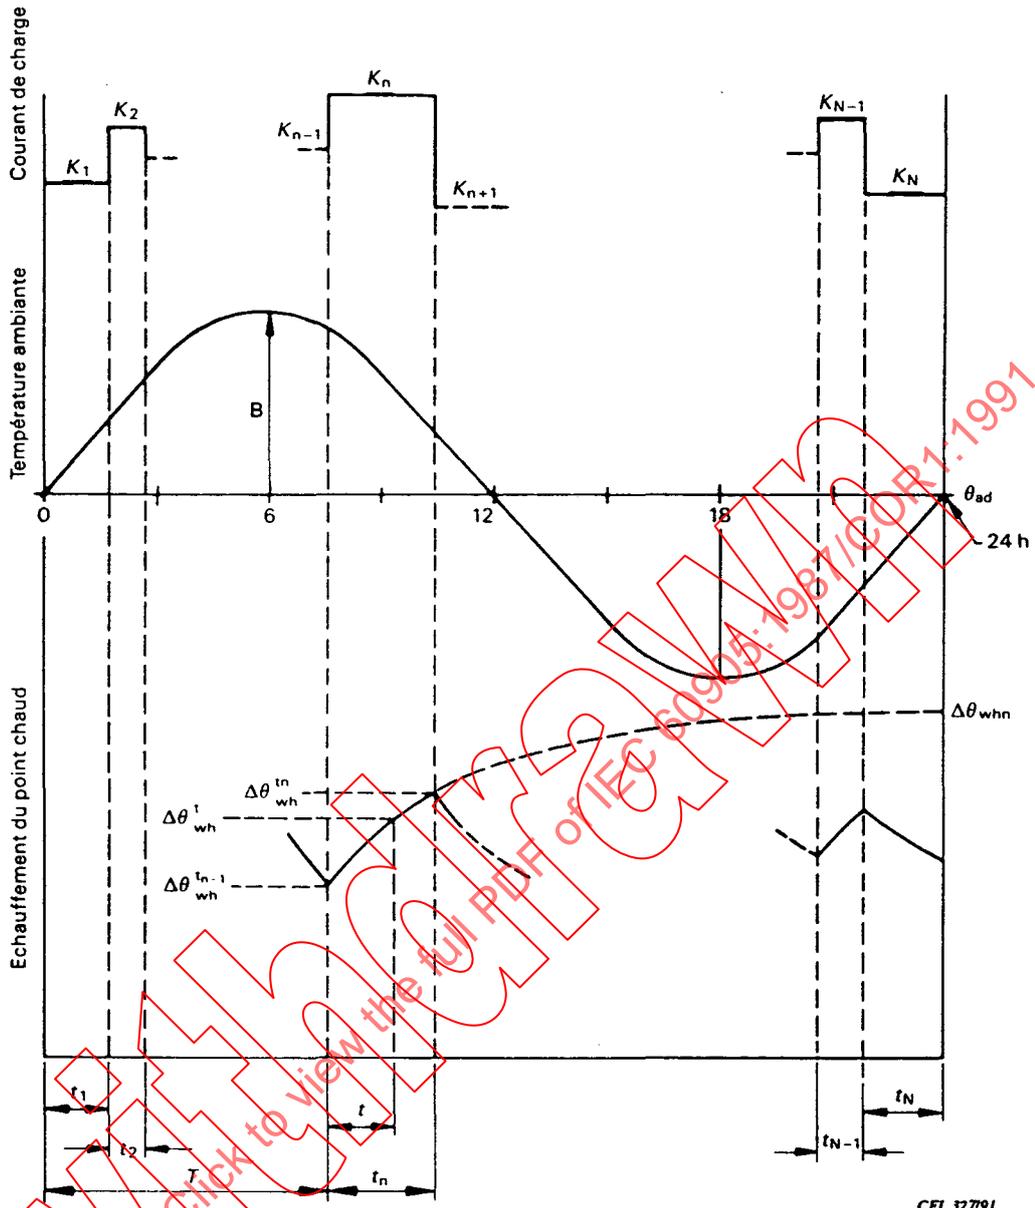

$$L = L + \int_0^{t_n} e^{\frac{\ln 2}{\theta_d} (\Delta \theta_{wh}^t - \theta_c)} dt$$

by the following formula:

$$L = L + \int_0^{t_n} e^{\frac{\ln 2}{\theta_d} (\Delta \theta_{wh}^t + \theta_{ad} - \theta_c)} dt$$

Pages 32 to 43

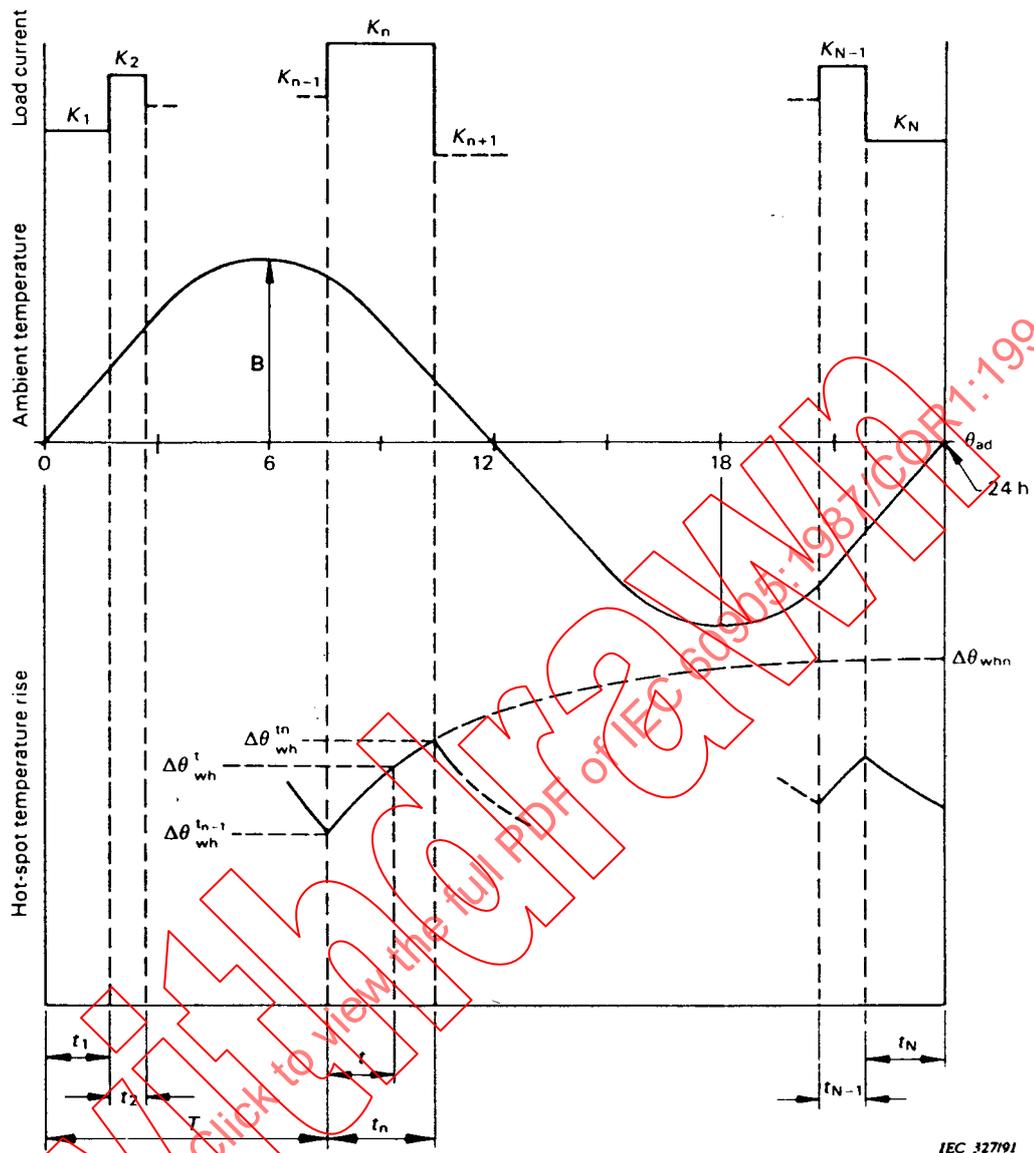

Replace the existing figures by the new figures enclosed.

NOTE - Température du point chaud de l'enroulement à tout instant = $\Delta\theta_{wh}^t + \theta_{ad}$.

Fig. 1. - Diagramme de charge à utiliser pour la préparation de programmes informatiques.

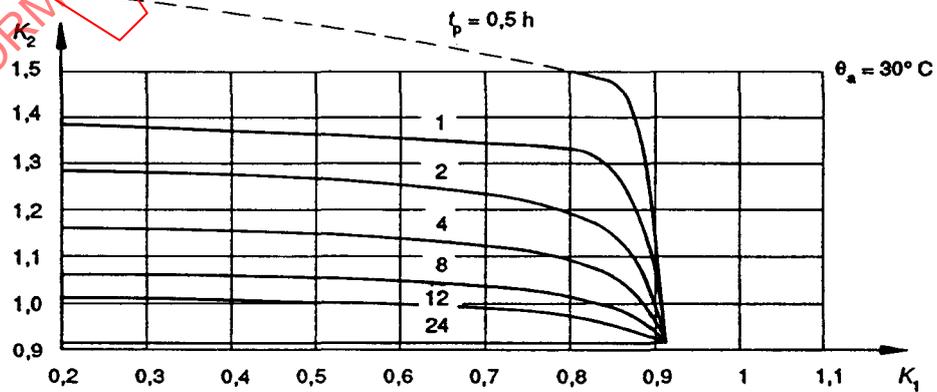

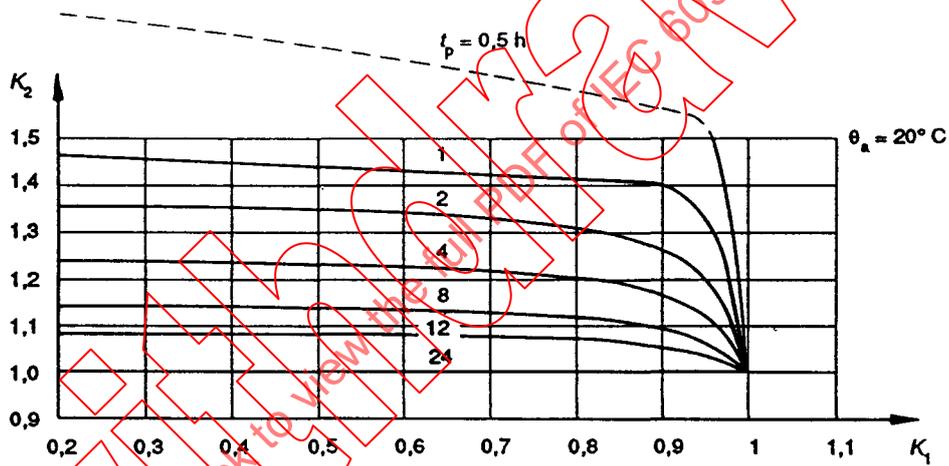

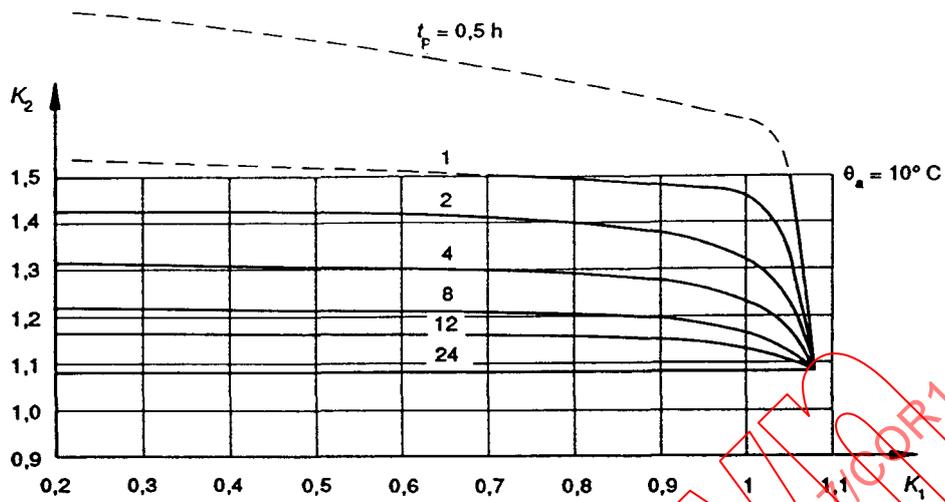

CEI 32791

IEC 327/91

NOTE - Hot-spot winding temperature at any instant = $\Delta\theta_{wh}^i + \theta_{ad}$.

Fig. 1. - Load diagram for use in the preparation of computer programs.

CEI-IEC 328/91

Fig. 5(1) - Courbes des charges pour une température de système d'isolation de 105 °C, $\tau = 0,5$ h, $\theta_a = 10, 20$ et 30 °C.

Load curves for insulation system temperature 105 °C, $\tau = 0,5$ h, $\theta_a = 10, 20$ and 30 °C.

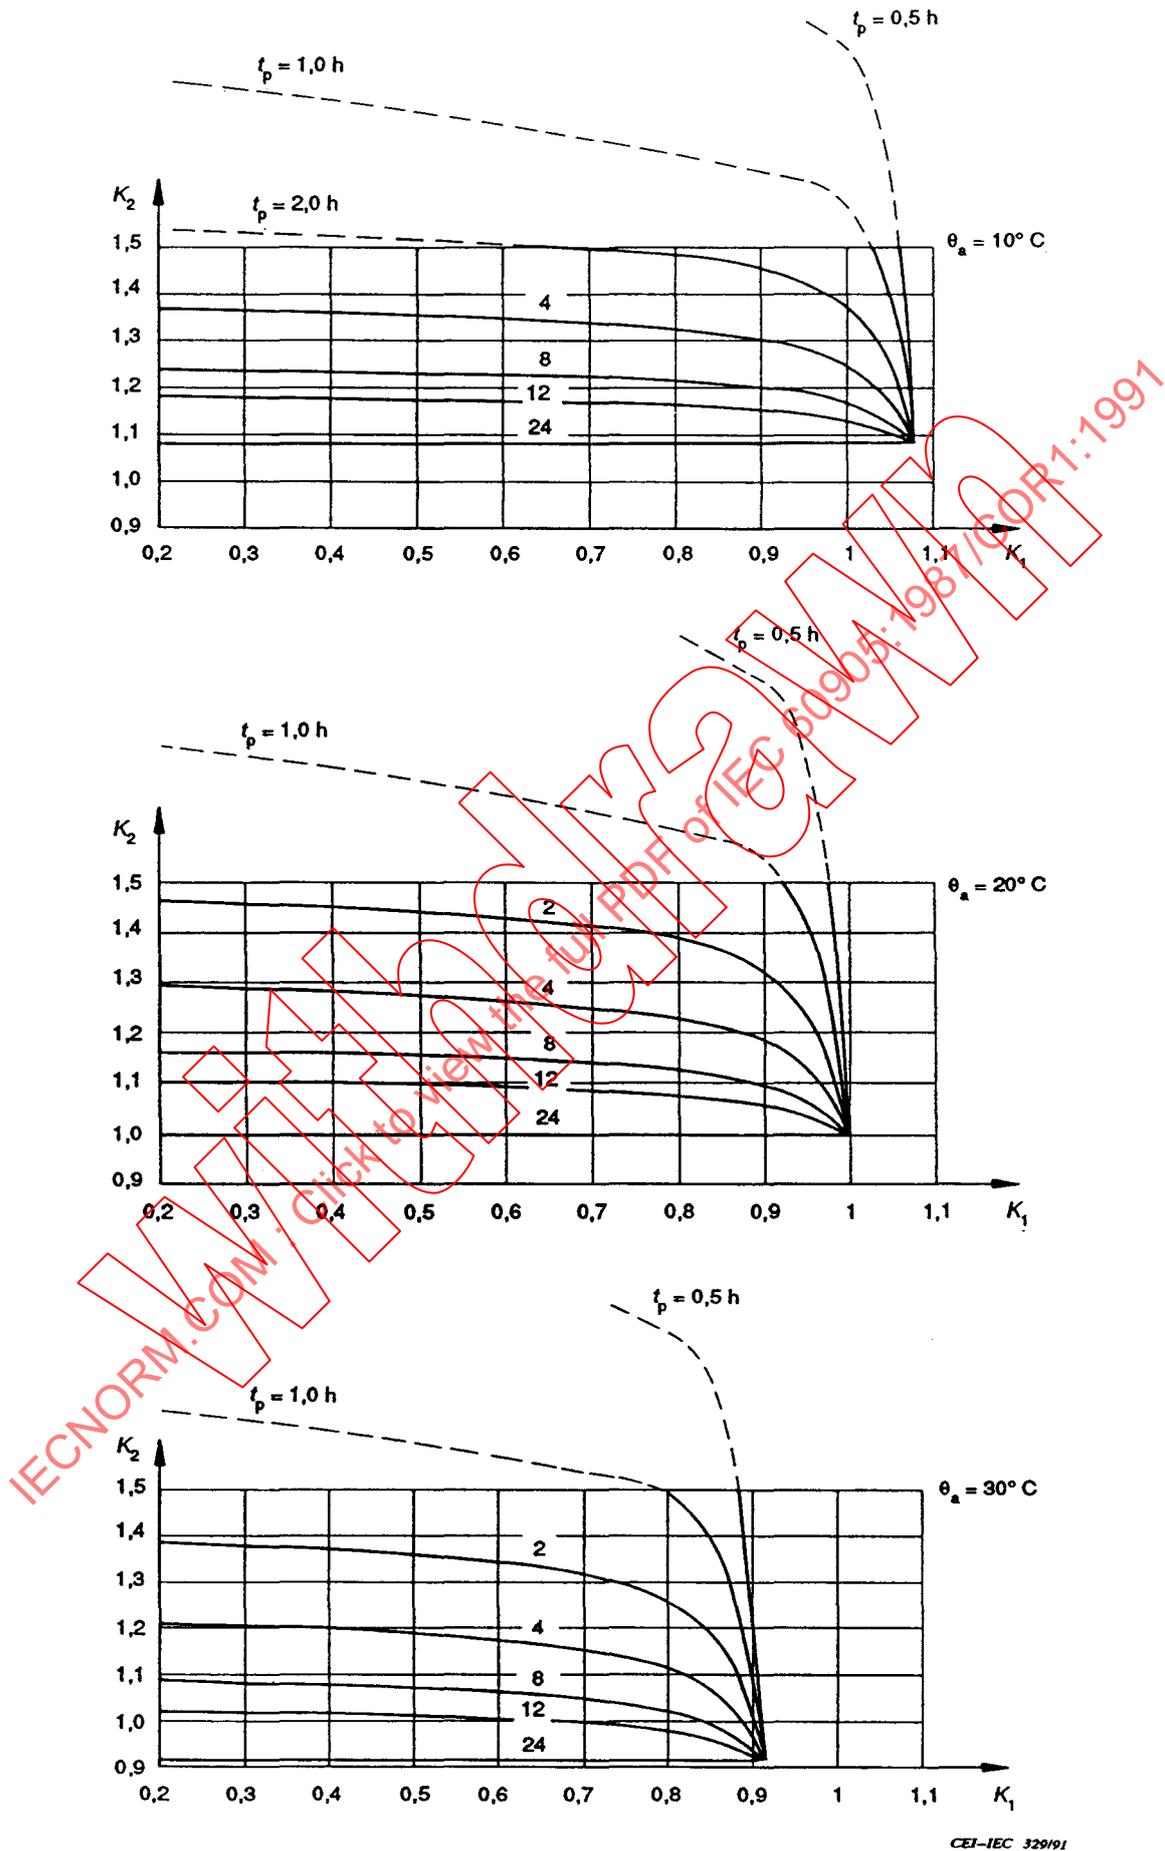

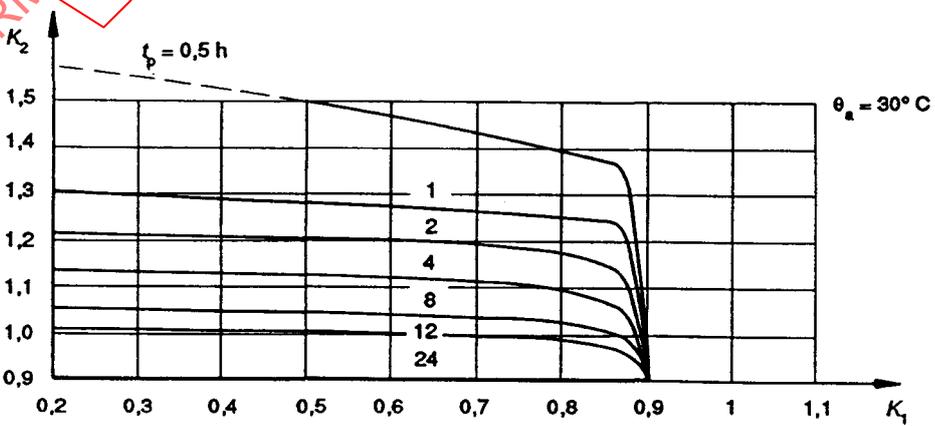

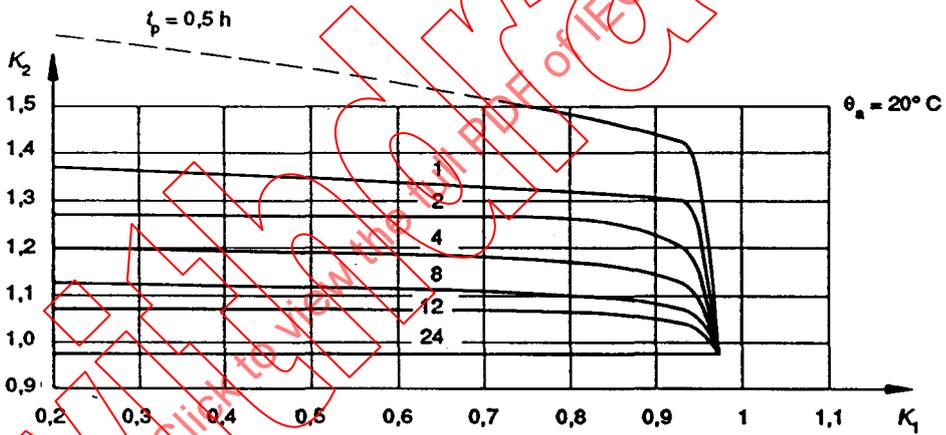

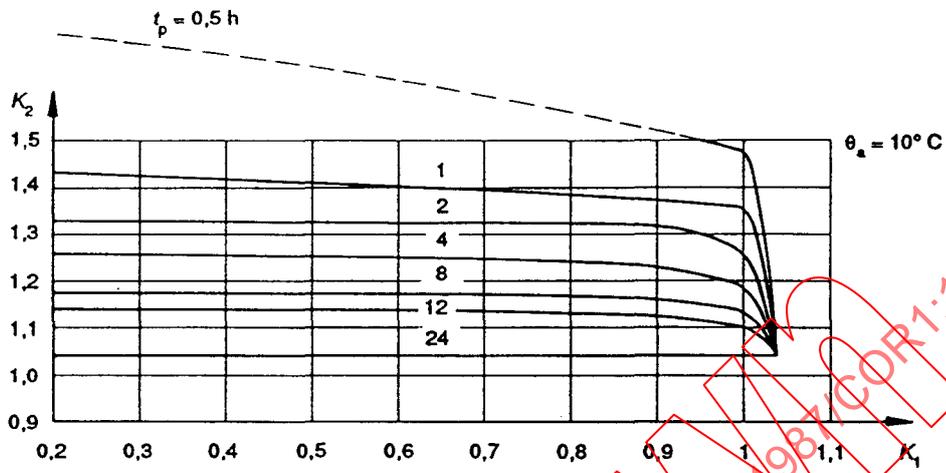

Fig. 5(2) – Courbes des charges pour une température de système d'isolation de 105 °C, $\tau = 1,0$ h, $\theta_a = 10, 20$ et 30 °C.

Load curves for insulation system temperature 105 °C, $\tau = 1,0$ h, $\theta_a = 10, 20$ and 30 °C.

CEI-IEC 330/91

Fig. 5(3) – Courbes des charges pour une température de système d'isolation de 120 °C, $\tau = 0,5 \text{ h}$, $\theta_a = 10, 20 \text{ et } 30^\circ \text{ C}$.

Load curves for insulation system temperature 120 °C, $\tau = 0,5 \text{ h}$, $\theta_a = 10, 20 \text{ and } 30^\circ \text{ C}$.

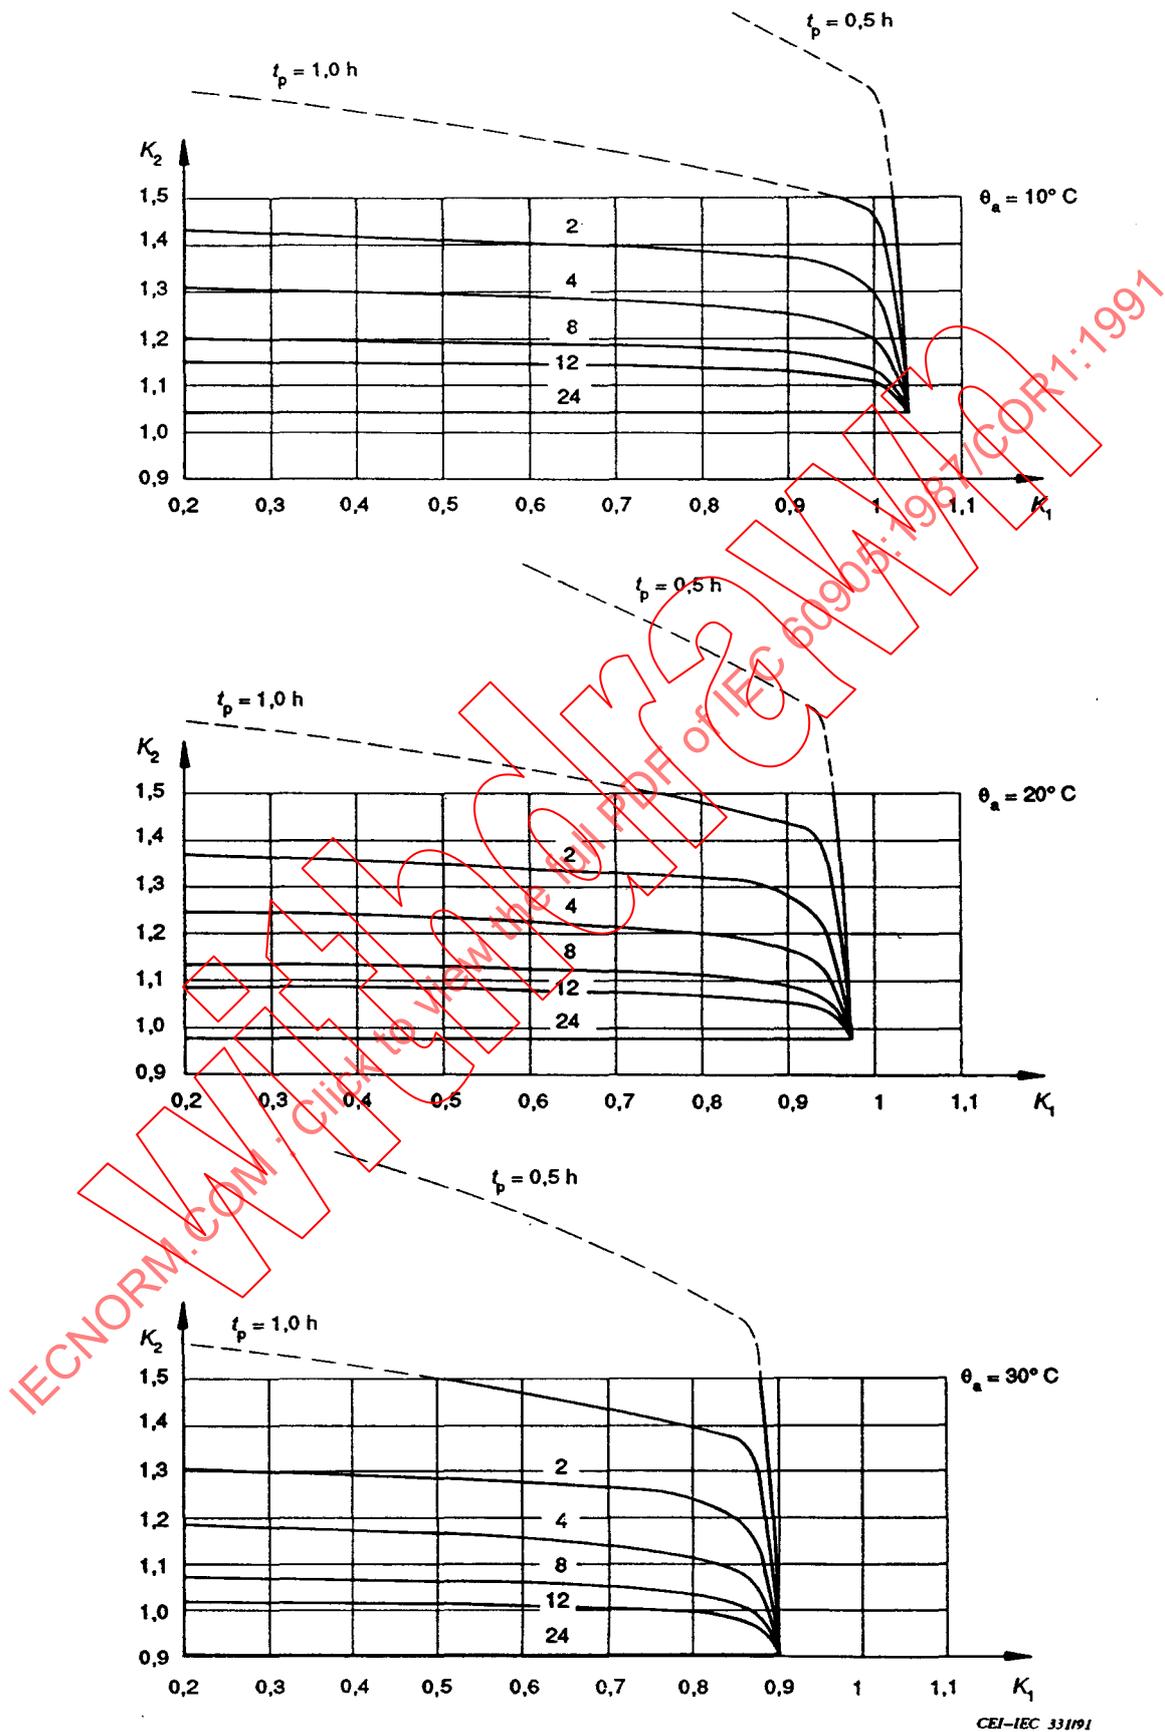

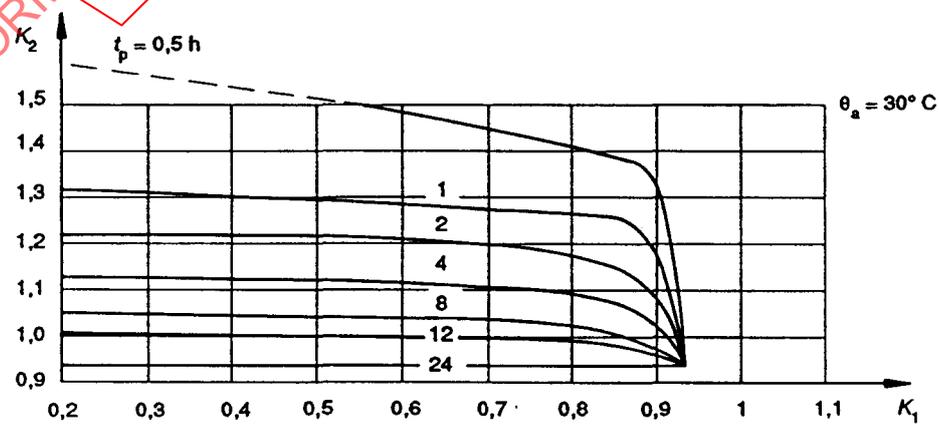

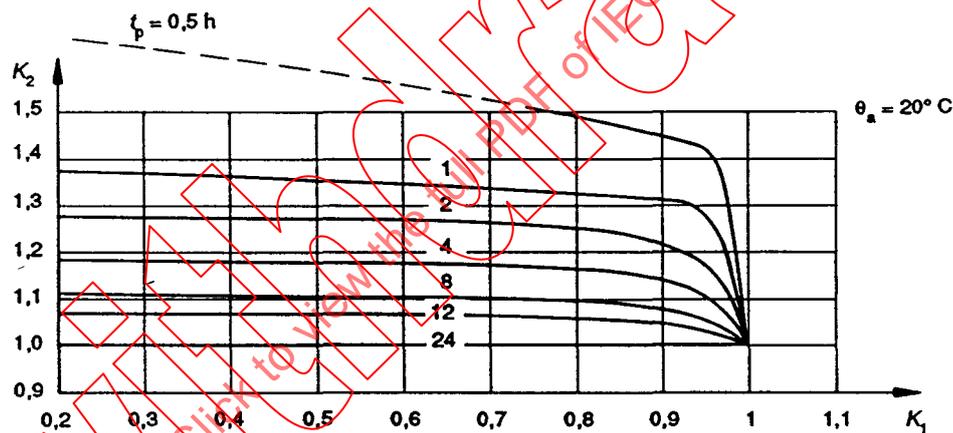

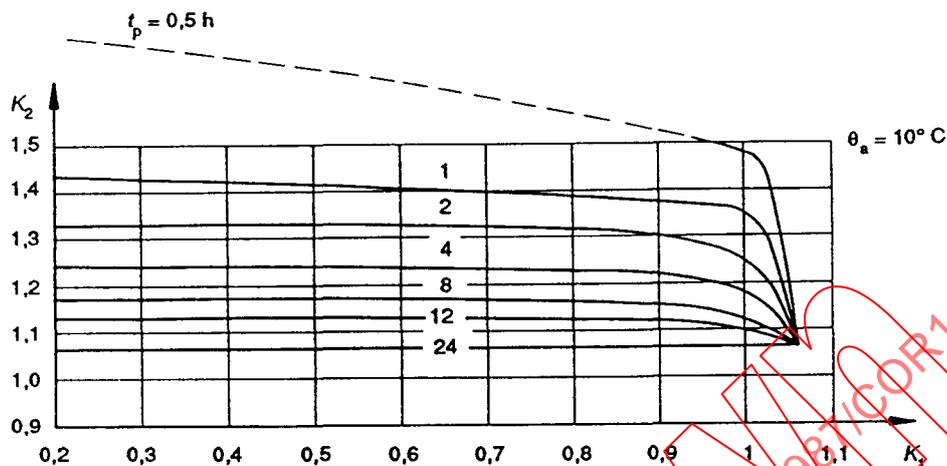

Fig. 5(4) – Courbes des charges pour une température de système d'isolation de 120 °C, $\tau = 1,0$ h, $\theta_a = 10, 20$ et 30 °C.

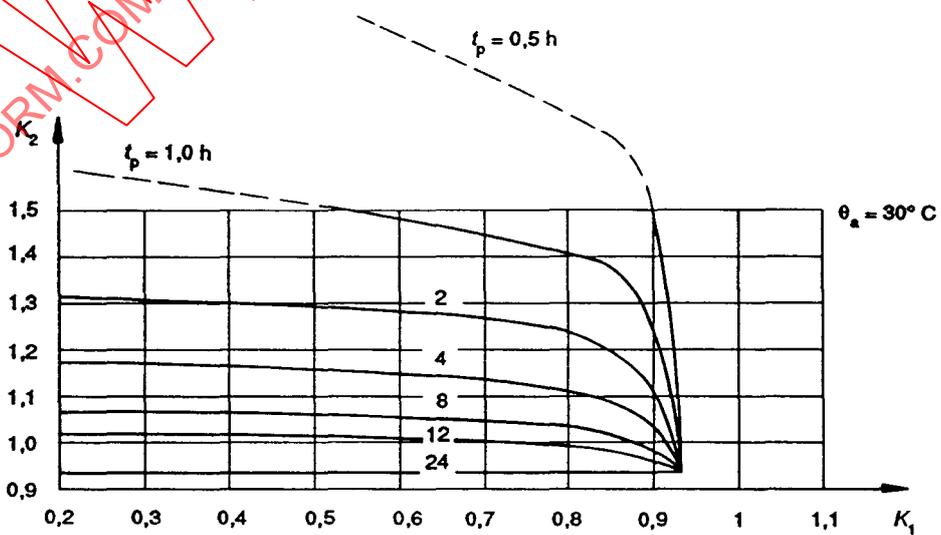

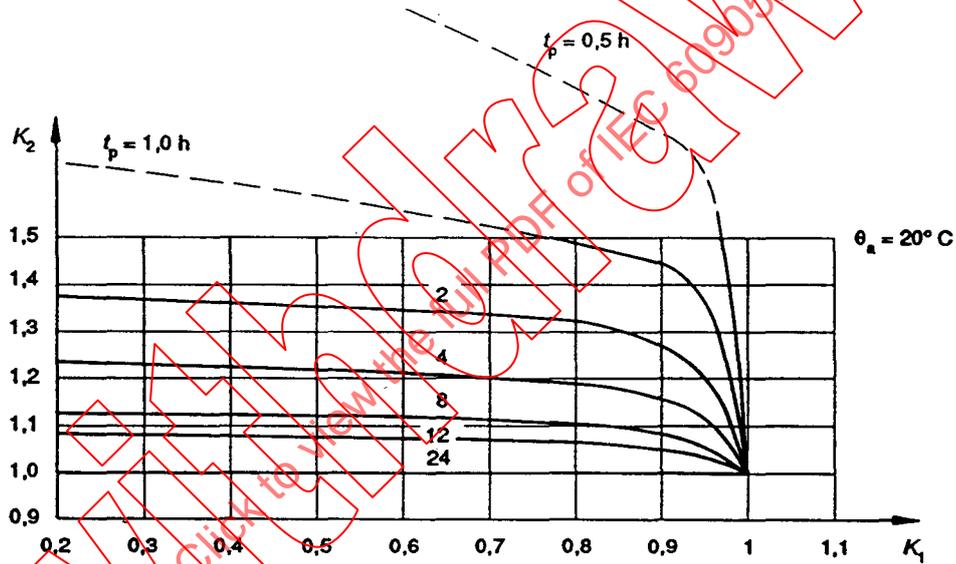

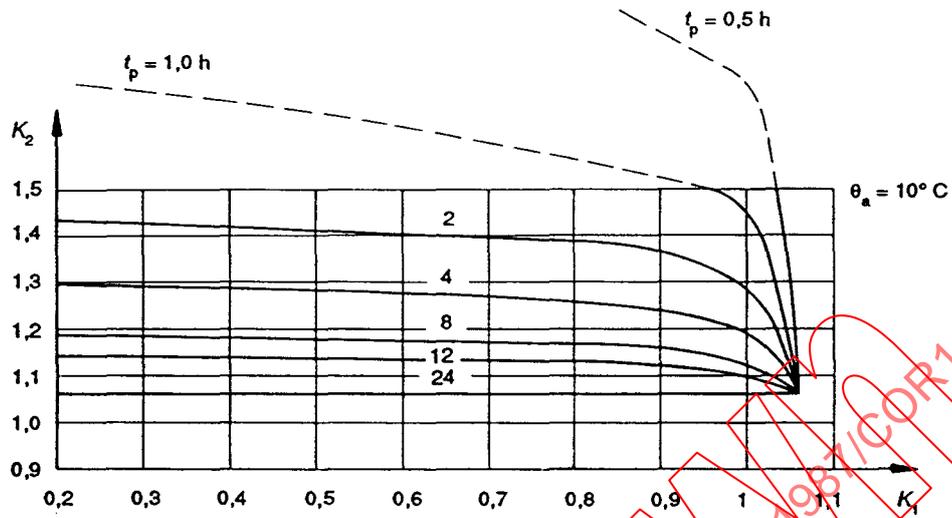

Load curves for insulation system temperature 120 °C, $\tau = 1,0$ h, $\theta_a = 10, 20$ and 30 °C.

CEI-IEC 332/91

Fig. 5(5) - Courbes des charges pour une température de système d'isolation de 130 °C, $\tau = 0,5 \text{ h}$, $\theta_a = 10, 20 \text{ et } 30^\circ \text{ C}$.

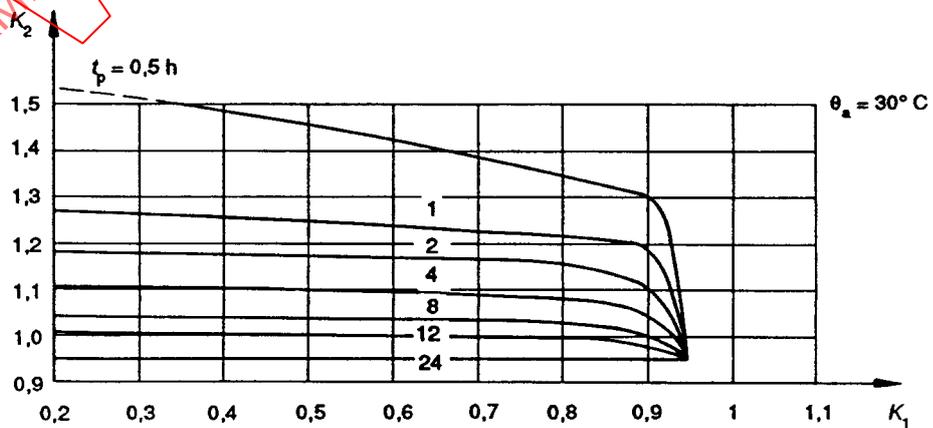

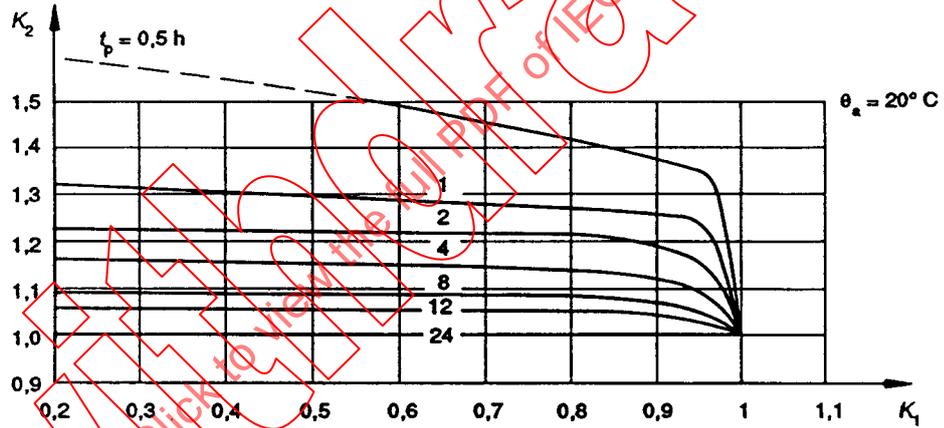

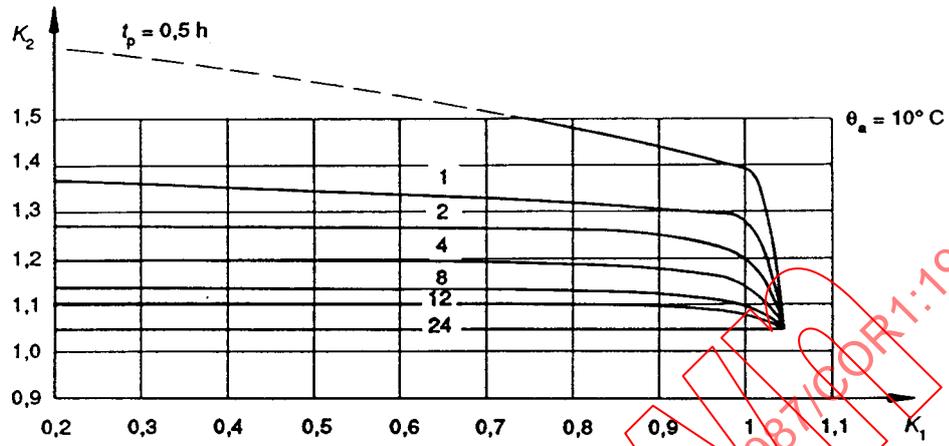

Load curves for insulation system temperature 130 °C, $\tau = 0,5 \text{ h}$, $\theta_a = 10, 20 \text{ and } 30^\circ \text{ C}$.
