INTERNATIONAL ELECTROTECHNICAL COMMISSION

MANAGEMENT OF ALARMS SYSTEMS FOR THE PROCESS INDUSTRIES

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62682 has been prepared by subcommittee 65A: System aspects, of IEC technical committee 65: Industrial-process measurement, control and automation.

The text of this standard is based on the following documents:

FDIS	Report on voting
65A/704/FDIS	65A/706/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

Purpose

This International Standard addresses the development, design, installation, and management of alarm systems in the process industries. Alarm management includes multiple work processes throughout the alarm system lifecycle. This standard defines the terminology and models to develop an alarm system, and it defines the work processes recommended to effectively maintain the alarm system throughout the lifecycle.

This standard was adapted from ANSI/ISA-18.2-2009, *Management of Alarm Systems for the Process Industries*, an International Society of Automation (ISA) standard, and with due consideration of other guidance documents that have been developed throughout industry. Ineffective alarm systems have often been cited as contributing factors in the investigation reports following major process incidents. This standard is intended to provide a methodology that will result in the improved safety of the process industries.

This standard is not the first effort to define terminology and practices for effective alarm systems. In 1999 the Engineering Equipment and Materials Users Association (EEMUA) issued Publication 191, *Alarm Systems: A Guide to Design, Management and Procurement*. In 2003 the User Association of Process Control Technology in Chemical and Pharmaceutical Industries (NAMUR) issued worksheet NA 102, *Alarm Management*.

During the development of this standard every effort was made to keep terminology and practices consistent with the previous work of these respected organizations and committees.

This document provides requirements for alarm management and alarm systems. It is intended for those individuals and organizations that

- a) manufacture or implement embedded alarm systems,
- b) manufacture or implement third-party alarm system software,
- c) design or install alarm systems,
- d) operate and/or maintain alarm systems, and
- e) audit or assess alarm system performance.

Organization

This standard is organized in two parts. The first part is introductory in nature, (Clauses 1 to 5). The main body of the standard follows (Clauses 6 to 18).

MANAGEMENT OF ALARMS SYSTEMS FOR THE PROCESS INDUSTRIES

1 Scope

1.1 General applicability

This International Standard specifies general principles and processes for the lifecycle management of alarm systems based on programmable electronic controller and computer-based human-machine interface (HMI) technology for facilities in the process industries. It covers all alarms presented to the operator, which includes alarms from basic process control systems, annunciator panels, safety instrumented systems, fire and gas systems, and emergency response systems.

The practices in this standard are applicable to continuous, batch, and discrete processes. There can be differences in implementation to meet the specific needs based on process type.

In jurisdictions where the governing authorities (e.g., national, federal, state, province, county, city) have established process safety design, process safety management, or other requirements, in addition to the requirements of this standard, these should be taken into consideration.

The primary function within the alarm system is to notify operators of abnormal process conditions or equipment malfunctions and support the response. The alarm systems can include both the basic process control system (BPCS) and the safety instrumented system (SIS), each of which uses measurements of process conditions and logic to generate alarms. Figure 1 illustrates the concepts of alarm and response dataflow through the alarm system. The alarm system also includes a mechanism for communicating the alarm information to the operator via an HMI, usually a computer screen or an annunciator panel. Additional functions of the alarm system are an alarm and event log, an alarm historian, and the generation of performance metrics for the alarm system. There are external systems that can use the data from the alarm system.

Figure 1 – Alarm system dataflow

1.2 Exclusions and inclusions

1.2.1 Operators

The functions of the operator receiving and responding to alarms are included in the scope of this standard. Management of operators is excluded from the scope of this standard.

1.2.2 Process sensors and final control elements

The alarms from sensors and final control elements are included in the scope of this standard. Process sensors and final control elements are shown in Figure 1 to indicate alarms can be implemented in these devices. The design and management of process sensors and final control elements are excluded from the scope of this standard.

1.2.3 Safety instrumented systems

The alarms from safety instrumented systems are included in the scope of this standard. The safety instrumented system (SIS) is shown in Figure 1 to indicate alarms can be implemented in these devices. The design and management of safety instrumented systems are excluded from this standard. Refer to IEC 61511.

The alarms and diagnostics from fire detection and protective systems or security systems that are presented to the operator through the control system are included in the scope of this standard. Fire detection and protective systems and security systems are excluded from the scope of this standard.

1.2.4 Event data

The indication and processing of analog, discrete, and event data other than alarm indications are excluded from the scope of this standard. The analysis techniques using both alarm and event data are excluded from the scope of this standard.

1.2.5 Alarm identification methods

Required methods of alarm identification are not specified in this standard. Examples of alarm identification methods are listed.

1.2.6 Management of change

A specific management of change procedure is not included in this standard. Some requirements and recommendations for a management of change procedure are included.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

None.

8.1	Objectif	124
8.2	Méthodes d'identification d'alarme	124
8.3	Formation à l'identification	124
9	Rationalisation.....	124
9.1	Objectif	124
9.2	Documentation de rationalisation	125
9.2.1	Exigences relatives à la documentation de rationalisation.....	125
9.2.2	Recommandations relatives à la documentation de rationalisation	125
9.3	Justification d'alarme	125
9.3.1	Processus de justification d'alarme	125
9.3.2	Approche de justification.....	125
9.3.3	Justification d'alarme individuelles.....	126
9.3.4	Impact sur le système d'alarme	126
9.4	Détermination de la valeur de consigne d'alarme	126

9.5	Priorisation	126
9.6	Retrait.....	127
9.7	Classification	127
9.8	Revue	127
9.9	Utilisation de la documentation	127
10	Conception détaillée: Conception d'alarme de base.....	127
10.1	Objectif.....	127
10.2	Utilisation des états d'alarme	127
10.2.1	Déclenchement d'état d'alarme	127
10.2.2	États d'alarme et autres fonctions logiques.....	128
10.2.3	Suppression d'alarme et autres fonctions logiques	128
10.3	Types d'alarme	128
10.4	Attributs d'alarme.....	129
10.4.1	Généralités.....	129
10.4.2	Description d'alarme.....	129
10.4.3	Valeurs de consigne	129
10.4.4	Priorité d'alarme	129
10.4.5	Bandes mortes d'alarme	129
10.4.6	Retard à l'activation et retard à la désactivation d'alarme	130
10.5	Changements programmatiques des attributs d'alarme	130
10.6	Conception d'alarme de base de revue	131
11	Conception détaillée: Conception de l'interface homme-machine pour les systèmes d'alarme.....	131
11.1	Objectif.....	131
11.2	Fonctions de l'IHM	131
11.2.1	Généralités.....	131
11.2.2	Exigences relatives aux informations de l'IHM	131
11.2.3	Exigences fonctionnelles de l'IHM.....	131
11.2.4	Exigences relatives à l'affichage de l'IHM	131
11.2.5	Exigences relatives aux enregistrements d'alarme.....	132
11.2.6	Recommandations relatives aux enregistrements d'alarme	132
11.3	Indications d'états d'alarme.....	132
11.3.1	Généralités.....	132
11.3.2	Indications exigées d'états d'alarme	132
11.3.3	Indications recommandées d'états d'alarme.....	132
11.3.4	Indications sonores d'états d'alarme	134
11.4	Indications de priorité d'alarme	134
11.4.1	Généralités.....	134
11.4.2	Exigences relatives à l'indication des priorités d'alarme.....	134
11.4.3	Exigences relatives aux indications des priorités d'alarme en couleur.....	134
11.4.4	Indications recommandées de priorités d'alarme.....	134
11.5	Indications de message d'alarme	135
11.5.1	Généralités.....	135
11.5.2	Indications recommandées de messages d'alarme	135
11.6	Affichages d'alarme	135
11.6.1	Généralités.....	135
11.6.2	Affichage de résumés d'alarme.....	136
11.6.3	Statut de résumé d'alarme.....	137
11.6.4	Affichages de journaux d'alarme	137

11.6.5	Affichages de processus.....	138
11.6.6	Affichages des détails d'étiquette.....	138
11.6.7	Autres éléments d'affichage.....	138
11.7	Suspension d'alarme.....	138
11.7.1	Généralités.....	138
11.7.2	Exigences fonctionnelles de la suspension d'alarme.....	138
11.7.3	Recommandations fonctionnelles de la suspension d'alarme.....	139
11.7.4	Affichages d'alarme suspendues.....	139
11.8	Alarmes "hors service".....	140
11.8.1	Généralités.....	140
11.8.2	Exigences fonctionnelles relatives aux alarmes "hors service".....	140
11.8.3	Affichages d'alarme "hors service".....	140
11.9	Alarmes supprimées par conception.....	141
11.9.1	Généralités.....	141
11.9.2	Exigences fonctionnelles relatives à la suppression conçue.....	141
11.9.3	Recommandations fonctionnelles relatives à la suppression par conception.....	141
11.9.4	Affichages supprimés par conception.....	141
11.10	Intégration d'annonceur d'alarme.....	142
11.10.1	Généralités.....	142
11.10.2	Recommandations relatives à l'intégration d'annonceurs d'alarme.....	142
11.10.3	Recommandations relatives à l'affichage d'annonceurs d'alarme.....	142
11.11	IHM pour alarmes de sécurité.....	142
11.11.1	Généralités.....	142
11.11.2	IHM indépendante pour alarmes de sécurité.....	142
12	Conception détaillée: Méthodes d'alarme améliorées et évoluées.....	142
12.1	Objectif.....	142
12.2	Base de l'alarme améliorée et avancée.....	143
12.2.1	Généralités.....	143
12.2.2	Effort, exigences relatives à la main-d'œuvre et complexité.....	143
12.3	Liaison d'informations.....	143
12.4	Alarme basée sur une logique.....	143
12.4.1	Généralités.....	143
12.4.2	Modification d'attributs d'alarme.....	143
12.4.3	Systèmes activés de l'extérieur.....	143
12.4.4	Suppression logique d'alarme et modification d'attributs.....	144
12.4.5	Alarme basée sur un état.....	144
12.5	Alarme basée sur un modèle.....	144
12.6	Considérations d'alarme supplémentaires.....	144
12.6.1	Généralités.....	144
12.6.2	Considérations relatives à l'extérieur des salles de commande.....	144
12.6.3	Systèmes d'alarme à distance.....	144
12.6.4	Systèmes d'alarme supplémentaires.....	145
12.6.5	Considérations relatives aux processus par lots.....	145
12.7	Formation, essais et audit de systèmes.....	145
12.8	Application d'attributs d'alarme.....	146
13	Mise en œuvre.....	146
13.1	Objectif.....	146
13.2	Planification de la mise en œuvre.....	146

13.3	Formation à la mise en œuvre.....	146
13.3.1	Généralités.....	146
13.3.2	Formation à la mise en œuvre.....	146
13.3.3	Exigences relatives à la formation à la mise en œuvre.....	146
13.3.4	Exigences relatives à la documentation de la formation pour les alarmes intensément gérées.....	147
13.3.5	Recommandations relatives à la documentation de la formation.....	147
13.3.6	Exigences relatives à la formation à la mise en œuvre pour les systèmes d'alarme nouveaux ou modifiés.....	147
13.3.7	Recommandations relatives à la formation à la mise en œuvre pour les systèmes d'alarme nouveaux ou modifiés.....	147
13.4	Essais et validation de la mise en œuvre.....	147
13.4.1	Généralités.....	147
13.4.2	Exigences relatives aux essais de mise en œuvre pour les alarmes intensément gérées.....	147
13.4.3	Recommandations relatives aux essais de mise en œuvre pour les alarmes nouvelles ou modifiées.....	148
13.4.4	Exigences relatives aux essais de mise en œuvre pour les systèmes d'alarme nouveaux ou modifiés.....	148
13.5	Documentation de la mise en œuvre.....	148
13.5.1	Généralités.....	148
13.5.2	Exigences relatives à la documentation.....	148
13.5.3	Recommandations relatives à la documentation de la mise en œuvre.....	149
14	Opération.....	149
14.1	Objectif.....	149
14.2	Procédures de réponse aux alarmes.....	149
14.2.1	Exigences relatives aux procédures de réponse aux alarmes.....	149
14.2.2	Recommandations relatives aux procédures de réponse aux alarmes.....	149
14.3	Suspension d'alarme.....	150
14.3.1	Exigences relatives à la suspension d'alarme.....	150
14.3.2	Suspension d'alarme dans le cas des alarmes intensément gérées.....	150
14.3.3	Recommandations relatives à la suspension d'alarme.....	150
14.3.4	Exigences relatives à l'enregistrement de la suspension d'alarme.....	150
14.4	Formation de mise à jour des connaissances pour les opérateurs.....	150
14.4.1	Exigences relatives à la formation pour mise à jour des connaissances pour les opérateurs.....	150
14.4.2	Documentation relative à la formation pour mise à jour des connaissances dans le cas des alarmes intensément gérées.....	150
14.4.3	Contenu de la formation pour mise à jour des connaissances dans le cas des alarmes intensément gérées.....	151
14.4.4	Recommandations relatives à la formation pour mise à jour des connaissances pour les alarmes.....	151
15	Maintenance.....	151
15.1	Objectif.....	151
15.2	Essais d'alarme périodiques.....	151
15.2.1	Généralités.....	151
15.2.2	Exigences relatives aux essais d'alarme périodiques.....	151
15.2.3	Essais d'alarme périodiques pour les alarmes intensément gérées.....	152
15.2.4	Exigences relatives à la procédure d'essais d'alarme périodiques.....	152
15.2.5	Recommandations relatives à la procédure d'essais d'alarme périodiques.....	152

15.2.6	Recommandations relatives aux essais d'alarme périodiques	152
15.3	Alarmes hors service	152
15.3.1	Généralités	152
15.3.2	Exigences relatives aux processus hors service	152
15.3.3	Alarmes intensément gérées hors service.....	153
15.3.4	Recommandations relatives aux processus hors service.....	153
15.3.5	Exigences pour le retour d'alarme en service.....	153
15.4	Réparation de matériel.....	153
15.5	Remplacement de matériel.....	153
15.6	Formation de mise à jour des connaissances pour la maintenance	153
15.6.1	Exigences générales	153
15.6.2	Exigences relatives à la formation pour mise à jour des connaissances dans le cas des alarmes intensément gérées.....	153
15.6.3	Recommandations relatives à la formation pour mise à jour des connaissances pour les alarmes	154
16	Surveillance et évaluation.....	154
16.1	Objectif	154
16.2	Exigences	154
16.3	Surveillance, évaluation, audit et référence.....	154
16.4	Surveillance de système d'alarme	155
16.5	Métrique des performances de système d'alarme.....	155
16.5.1	Généralités	155
16.5.2	Valeur moyenne de la fréquence d'alarme par console d'opérateur.....	155
16.5.3	Valeur de crête de la fréquence d'alarme par console d'opérateur	156
16.5.4	Inondations d'alarme	156
16.5.5	Alarmes fréquentes.....	157
16.5.6	Alarmes oscillantes et alarmes fugaces	157
16.5.7	Alarmes prolongées.....	157
16.5.8	Distribution des priorités d'alarme annoncées.....	157
16.5.9	Distribution des priorités d'alarme.....	158
16.6	Suppression d'alarme non autorisée	158
16.7	Surveillance d'attributs d'alarme	158
16.8	Rapports relatifs aux analyses de systèmes d'alarme	159
16.9	Résumé des métriques de performances d'alarme	159
17	Gestion des changements	160
17.1	Objectif	160
17.2	Changements soumis à la gestion des changements	160
17.3	Exigences relatives à la documentation des changements	160
17.4	Recommandations relatives à la documentation des changements	161
17.5	Recommandations relatives au retrait d'alarme.....	161
17.6	Recommandations relatives aux modifications des attributs d'alarme.....	161
18	Audit.....	161
18.1	Objectif	161
18.2	Référence	161
18.2.1	Généralités	161
18.2.2	Exigences relatives à l'audit initial ou référence.....	162
18.3	Interviews d'audit.....	162
18.4	Recommandations relatives à l'audit	162
18.5	Plans d'action	162
