Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Amendment 1 to International Standard ISO/IEC 10737:1994 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*.

Introduction

ISO/IEC 10737 specifies the elements of management information relating to OSI Transport Layer service and protocol described in ISO/IEC 8072 and ISO/IEC 8073. However the management information relating to Network Connection Management Subprotocol (NCMS) is not included.

This amendment adds to ISO/IEC 10737 the elements of management information relating to NCMS described in annex B of ISO/IEC 8073.

This amendment has a structure which is similar to that of ISO/IEC 10737 in order to facilitate cross reference between the two documents.

AMENDMENT 1: NCMS Management

4 Symbols and Abbreviations

Insert the following symbols and abbreviations after MO:

NC	Network Connection
NCC	Network Connection Control
NCMS	Network Connection Management Subprotocol

5 Elements of Transport Layer Management Information

5.1 Managed Object Hierarchy

5.1.1 Summary of Managed Objects

Add the following new items after item g):

- h) NCMS Protocol Machine management object (ncmsPM, clause 5.9)
- i) NetworkConnection Control managed object (ncc, clause 5.10.1)
- j) NetworkConnection Control Initial Value managed object (nccIV, clause 5.10.2)

Replace figure 1 by the following figure:

The significance subparameter of each item of the additionalInformation shall be set to the value 'False' (i.e. not significant) so that a managing system receiving the event will be less likely to reject it. The perceivedSeverity shall be set to Minor.

A subsequent communicationsAlarm with a perceivedSeverity value of 'Cleared' shall not be generated. No other fields or parameters shall be used, with the exception of further parameters in the additionalInformation field.!

--- USE OF NCC INITIAL VALUES BEHAVIOUR

use-of-nccInitialValues-B BEHAVIOUR

DEFINED AS

!The creation of an instance of the NCC MO using the ncc-ncmsPM name binding may reference an instance of NCC IVMO. When this occurs, some of the initial values of the attributes of the instance of NCC MO may be supplied by the values of the attributes in the specified instance of the NCC IVMO.

However any such value may be overridden by a value supplied by local means(for example across an internal interface). Where values are supplied by the IVMO, the initial values of an attribute of NCC MO shall be the value of the corresponding attribute in the NCC IVMO(that is, which has the same attribute template label).!
