**Part 4:  
Test methods**

**TECHNICAL CORRIGENDUM 1**

*Technologies de l'information — Identification des personnes — Permis de conduire conforme à l'ISO —*

*Partie 4: Méthodes d'essai*

*RECTIFICATIF TECHNIQUE 1*

Technical Corrigendum 1 to ISO/IEC 18013-4:2011 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 17, *Cards and personal identification*.

---

*Page 2, Clause 4 Terms and Definitions*

Insert the following definition:

**4.3**

**CL protocol**

protocol defined in ISO/IEC 14443-4:2008

Replace the entire table with the following table:

|                  |   |
|------------------|---|
| Test Case-ID     | SE_LDS_DG1_015  |
| Purpose          | This test checks the Vehicle Category Code of each "Category of Vehicle/Restriction/Condition" entry in the "Categories of Vehicles/Restrictions/Conditions" DO (Tag '7F63') in EF.DG1. |
| Version          | 1.1   |
| References       | ISO/IEC 18013-2:2008, A.4<br>ISO/IEC 18013-2:2008, Annex C  |
| Profile          |   |
| Preconditions    | 1. EF.DG1 has been retrieved from the IDL.<br>2. The Categories of Vehicles/Restrictions/Conditions object has been retrieved from EF.DG1.  |
| Test Scenario    | Perform the following checks for each of the "Category of Vehicle/Restriction/Condition" entries:<br>1. Check the format of the Vehicle Category Code (sub-field #1).                   |
| Expected Results | 1. The Vehicle Category Code contains Alpha-Numeric characters only.  |

Replace the entire table with the following table:

|                  |   |
|------------------|---|
| Test Case-ID     | SE_LDS_DG1_018  |
| Purpose          | This test checks the Code field (if present) of each "Category of Vehicle/Restriction/Condition" entry in the "Categories of Vehicles/Restrictions/Conditions" DO (Tag '7F63') in EF.DG1.           |
| Version          | 1.1   |
| References       | ISO/IEC 18013-2:2008, A.4<br>ISO/IEC 18013-2:2008, A.5.1<br>ISO/IEC 18013-2:2008, Annex C   |
| Profile          |   |
| Preconditions    | 1. EF.DG1 has been retrieved from the IDL.<br>2. The Categories of Vehicles/Restrictions/Conditions object has been retrieved from EF.DG1.  |
| Test Scenario    | Perform the following checks for each of the "Category of Vehicle/Restriction/Condition" entries:<br>1. Check the format of the Code.<br>2. Check the value of the Code.                            |
| Expected Results | 1. Code shall be encoded in ANS characters.<br>2. The value of the Code is one of the values specified in ISO/IEC 18013-2:2008, A.5.1 (i.e. "01", "03", "78", "S01", "S02", "S03", "S04" or "S05"). |

Page 26, A.3.2.19 Test Case SE\_LDS\_DG1\_019

Replace the entire table with the following table:

|                  |   |
|------------------|---|
| Test Case-ID     | SE_LDS_DG1_019  |
| Purpose          | This test checks the Sign field (if present) of each "Category of Vehicle/Restriction/Condition" entry in the "Categories of Vehicles/Restrictions/Conditions" DO (Tag '7F63') in EF.DG1.   |
| Version          | 1.1   |
| References       | ISO/IEC 18013-2:2008, A.4<br>ISO/IEC 18013-2:2008, A.5.1<br>ISO/IEC 18013-2:2008, Annex C   |
| Profile          |   |
| Preconditions    | 1. EF.DG1 has been retrieved from the IDL.<br>2. The Categories of Vehicles/Restrictions/Conditions object has been retrieved from EF.DG1.  |
| Test Scenario    | Perform the following checks for each of the "Category of Vehicle/Restriction/Condition" entries:<br>1. Check the format of the Sign.<br>2. Check the value of the Sign.<br>3. Check the Sign only occurs in combination with an applicable Code.<br>4. Check the Sign only occurs in combination with a Value field.   |
| Expected Results | 1. Sign shall be encoded in Special characters.<br>2. The value of the Sign is one of the values specified in ISO/IEC 18013-2:2008, A.5.1 (i.e. "<", "=", ">", "<=", "=<", "<>", "><", ">=", "=>", "==" ).<br>3. The value of the Code is one of the following values specified in ISO/IEC 18013-2:2008, A.5.1 (i.e. "S01", "S02", "S03" or "S04").<br>4. The Value field is not empty. |

Page 26, A.3.2.20 Test Case SE\_LDS\_DG1\_020

Replace the entire table with the following table:

|                  |  |
|------------------|--|
| Test Case-ID     | SE_LDS_DG1_020   |
| Purpose          | This test checks the Value field (if present) of each "Category of Vehicle/Restriction/Condition" entry in the "Categories of Vehicles/Restrictions/Conditions" DO (Tag '7F63') in EF.DG1.   |
| Version          | 1.1  |
| References       | ISO/IEC 18013-2:2008, A.4<br>ISO/IEC 18013-2:2008, A.5.1<br>ISO/IEC 18013-2:2008, Annex C  |
| Profile          |  |
| Preconditions    | 1. EF.DG1 has been retrieved from the IDL.<br>2. The Categories of Vehicles/Restrictions/Conditions object has been retrieved from EF.DG1.   |
| Test Scenario    | Perform the following checks for each of the "Category of Vehicle/Restriction/Condition" entries:<br>1. Check the format of the Value.<br>2. Check the Value only occurs in combination with a Code.<br>3. Check the Value only occurs in combination with a Sign. |
| Expected Results | 1. The Value field shall be encoded in ANS format.<br>2. The Code field is not empty.<br>3. The Sign field is not empty.   |

Page 78, A.3.11.3 Test Case SE\_LDS\_SOD\_003

In step 2 of Expected Results, delete "the" before "EF.SOD".

Page 80, A.3.11.7 Test Case SE\_LDS\_SOD\_007

In step 9 of Test Scenario, delete "the" before " SubjectKeyIdentifier".

Page 94, B.2.6 Certificate specification

Add following text after the example:

"The trust point certificate shall be an authoritative time source certificate."

Page 144, B.2.6.7.1 CERT\_LF\_07a

Replace the entire table with the following table:

|                    |   |  |
|--------------------|---|--|
| Cert ID            | CERT_LF_07a   |  |
| Purpose            | <p>This is a regular certificate. Its effective date equals the Trust Root's effective date plus five days and the expiration date equals the Trust Root's effective date plus two months.</p> <p>Path length constraint is set to 'Fh'</p> <p>This is not an authoritative time source certificate.</p>  |  |
| Version            | 1.1   |  |
| Content definition | <p>7F 21 <i>aa</i></p> <p>7F 4E <i>bb</i></p> <p>5F 29 01 00</p> <p>42 <i>cc dd</i></p> <p>7F 49 <i>ee ff</i></p> <p>5F 20 0D 54 45 53 54 43 45 52 54 4C 46 30 30 37</p> <p>7F 4C 0F 06 07 28 81 8C 5D 03 03 01 53 04 0F FF FF FF</p> <p>5F 25 06 <i>gg</i></p> <p>5F 24 06 <i>hh</i></p> <p>5F 37 <i>ii jj</i></p> <p><i>aa</i> is the encoded combined length of certificate body and signature objects<br/> <i>bb</i> is the encoded length the certificate body object<br/> <i>cc</i> is the encoded length of the AKID<br/> <i>dd</i> is the placeholder for the AKID (<i>cc</i> bytes)<br/> <i>ee</i> is the encoded length of the certificates public key,<br/> <i>ff</i> is the placeholder for the certificates public key bytes (<i>ee</i> bytes),<br/> <i>gg</i> is the placeholder for the BCD encoded effective date of the certificate<br/> <i>hh</i> is the placeholder for the BCD encoded expiration date of the certificate<br/> <i>ii</i> is the encoded length of the certificates signature object,<br/> <i>jj</i> is the placeholder for the certificates signature (<i>ii</i> bytes)</p> |  |
| Parameter          | Authority Key Identifier  | As defined by the Trust point  |
|                    | Subject Key Identifier  | TESTCERTLF007  |
|                    | Relative authorization  | Non authoritative time source<br>Path length constraint set to F<br>Grant read access to all DGs |
|                    | Certificate effective date  | Trust Point <sub>eff</sub> + 5 days  |
|                    | Certificate expiration date   | Trust Point <sub>eff</sub> + 2 months  |
|                    | Public Key reference  | Public key of key pair CERT_LF_KEY_07  |
|                    | Signing Key reference   | Signed with the private key of key pair TRUSTPOINT_KEY_00  |

Replace the entire table with the following table:

|                    |   |  |
|--------------------|---|--|
| Cert ID            | CERT_LF_07b   |  |
| Purpose            | <p>This is a regular certificate. Its effective date equals the Trust Root's effective date and the expiration date equals the Trust Root's effective date plus four days.</p> <p>Path length constraint is set to 'Fh'</p> <p>This is not an authoritative time source certificate.</p>  |  |
| Version            | 1.1   |  |
| Content definition | <p>7F 21 <i>aa</i></p> <p>7F 4E <i>bb</i></p> <p>5F 29 01 00</p> <p>42 <i>cc dd</i></p> <p>7F 49 <i>ee ff</i></p> <p>5F 20 0D 54 45 53 54 43 45 52 54 4C 46 30 30 37</p> <p>7F 4C 0F 06 07 28 81 8C 5D 03 03 01 53 04 0F FF FF FF</p> <p>5F 25 06 <i>gg</i></p> <p>5F 24 06 <i>hh</i></p> <p>5F 37 <i>ii jj</i></p> <p><i>aa</i> is the encoded combined length of certificate body and signature objects<br/> <i>bb</i> is the encoded length the certificate body object<br/> <i>cc</i> is the encoded length of the AKID<br/> <i>dd</i> is the placeholder for the AKID (<i>cc</i> bytes)<br/> <i>ee</i> is the encoded length of the certificates public key,<br/> <i>ff</i> is the placeholder for the certificates public key bytes (<i>ee</i> bytes),<br/> <i>gg</i> is the placeholder for the BCD encoded effective date of the certificate<br/> <i>hh</i> is the placeholder for the BCD encoded expiration date of the certificate<br/> <i>ii</i> is the encoded length of the certificates signature object,<br/> <i>jj</i> is the placeholder for the certificates signature (<i>ii</i> bytes)</p> |  |
| Parameter          | Authority Key Identifier  | As defined by the Trust point  |
|                    | Subject Key Identifier  | TESTCERTLF007  |
|                    | Relative authorization  | Non authoritative time source<br>Path length constraint set to F<br>Grant read access to all DGs |

Delete "the" before "certificates" in the second line of the Note.

## Page 190, B.3.4 Test Unit SE\_ISO7816\_SelEFSM – Protected SELECT EF Command

Delete "the" at the end of the first line of the Note.

## Page 243, B.3.9.33 Test case SE\_ISO7816\_SecEAP\_33

Replace the entire table with the following table:

|                  |  |
|------------------|--|
| Test – ID        | SE_ISO7816_SecEAP_33   |
| Purpose          | READ BINARY command with odd instruction and with short EF ID for EF.DG14 without BAP on a plain profile (Positive test).  |
| Version          | 1.1  |
| Profile          | EAP, Plain, OddIns   |
| Preconditions    | <ol style="list-style-type: none"> <li>1. The LDS application shall have been selected.</li> <li>2. The BAP mechanism shall not have been performed.</li> </ol>  |
| Test scenario    | <ol style="list-style-type: none"> <li>1. Send the given READ BINARY APDU for EF.DG14 (short EF ID '0E') to the IDL.<br/>'00 B1 00 0E 03 54 01 00 06'</li> <li>2. Verify the DG14 data returned.</li> </ol>                              |
| Expected results | <ol style="list-style-type: none"> <li>1. 6 bytes of data, and '90 00' as a plain text response without Secure Messaging.</li> <li>2. The data shall consist of a DO '53'. The value field (DG14 data) shall start with '6E'.</li> </ol> |

Page 270, B.3.11.13 Test case SE\_ISO7816\_CertVer\_13

Replace the entire table with the following table:

|                  |   |
|------------------|---|
| Test - ID        | SE_ISO7816_CertVer_13   |
| Purpose          | Test the MSE:Set DST command with an invalid class byte.  |
| Version          | 1.1   |
| Profile          | EAP   |
| Preconditions    | <ol style="list-style-type: none"> <li>1. The LDS application shall have been selected.</li> <li>2. The BAP mechanism shall have been performed.</li> <li>3. The CA mechanism shall have been performed as well.</li> <li>4. The Certification Authority Reference shall have been read from the EF.COM file (Current trust root).</li> <li>5. All commands are encoded as legally structured Secure Messaging APDUs.</li> </ol>  |
| Test scenario    | <ol style="list-style-type: none"> <li>1. Send the given MSE: Set DST APDU to the IDL.<br/>                     '8C 22 81 B6 &lt;Lc&gt; 87 &lt;L<sub>87</sub>&gt; 01 &lt;Cryptogram&gt; 8E 08 &lt;Checksum&gt; 00'                     <ul style="list-style-type: none"> <li>• &lt;Cryptogram&gt; contains the following encrypted DOs<br/>83 &lt;L<sub>83</sub>&gt; &lt;AKID&gt;</li> <li>• The Certification Authority Reference shall be used as read from the EF.COM file.</li> <li>• The class byte is set to an invalid value.</li> </ul> </li> <li>2. If the error code in step 1 was returned in a Secure Messaging response, verify that the secure messaging session has not been aborted. If a plain error code was returned, this step is skipped.<br/>                     Send an arbitrary SM APDU to the chip.<br/>                     '0C B0 81 00 0D 97 01 01 8E 08 &lt;checksum&gt; 00'</li> </ol> |
| Expected results | <ol style="list-style-type: none"> <li>1. Checking error. Note that the behaviour of the chip regarding the Secure Messaging context is undefined. Therefore this error can be returned in plain or as an SM response.</li> <li>2. Skipped or '90 00' in a valid SM response.</li> </ol>  |

Page 308, B.3.13 Test Unit SE\_ISO7816\_AccCond - Effective Access Conditions

Delete "the" before "certificates" in the second last line of the first paragraph.

Page 321, B.3.14 Test Unit SE\_ISO7816\_Update - Update mechanism

Add following text at the end of the paragraph:

"The initial Trust Point shall be an authoritative time source"

Page 321, B.3.14.1 Test case SE\_ISO7816\_Update\_1

Replace the entire table with the following table:

|                  |  |
|------------------|--|
| Test - ID        | SE_ISO7816_Update_1  |
| Purpose          | Test the "Current Date" update mechanism with a non-authoritative time source certificate signed by an authoritative time source entity.   |
| Version          | 1.1  |
| Profile          | EAP  |
| Preconditions    | <ol style="list-style-type: none"> <li>1. The LDS application shall have been selected.</li> <li>2. The CA mechanism shall have been performed as well.</li> <li>3. The Certification Authority Reference shall have been read from the EF.COM file (trust root).</li> <li>4. All APDUs are sent as valid SecureMessaging APDUs.</li> </ol>  |
| Test scenario    | <ol style="list-style-type: none"> <li>1. PSO – VERIFY CERTIFICATE command:<br/>Send the appropriate Certificate as specified in the "Certificate set 7" chapter as CERT_LF_07a.<br/>'0C 2A 00 BE &lt;Lc&gt; 87 &lt;L87&gt; 01 &lt;Cryptogram&gt; 8E 08 &lt;Checksum&gt; &lt;Le&gt;' <ul style="list-style-type: none"> <li>• The certificate is marked as non-authoritative time source but is signed by an authoritative time source entity so the chip shall update its current date.</li> <li>• Reset the chip after this step and restore the preconditions for this test case before the next step is performed.</li> </ul> </li> <li>2. PSO – VERIFY CERTIFICATE command:<br/>Send the appropriate Certificate as specified in the "Certificate set 7" chapter as CERT_LF_07b.<br/>'0C 2A 00 BE &lt;Lc&gt; 87 &lt;L87&gt; 01 &lt;Cryptogram&gt; 8E 08 &lt;Checksum&gt; &lt;Le&gt;' <ul style="list-style-type: none"> <li>• This certificate has an expiry date BEFORE the current date. Therefore this certificate shall be rejected.</li> </ul> </li> </ol> |
| Expected results | <ol style="list-style-type: none"> <li>1. '90 00' in a valid SM response.</li> <li>2. Checking error.</li> </ol>   |

Add following text after the table:

"After this test case, the chip current date is 'Trust Point<sub>eff</sub> + 5 days'."
