## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see <http://www.iso.org/directives>).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of the Standard, the meaning of the ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword – Supplementary information](#)

ISO/IEC 29341-26-15 was prepared by UPnP Forum and adopted, under the PAS procedure, by joint technical committee ISO/IEC JTC 1, *Information technology*, in parallel with its approval by national bodies of ISO and IEC.

The list of all currently available parts of ISO/IEC 29341 series, under the general title *Information technology — UPnP Device Architecture*, can be found on the [ISO web site](#).

## **Introduction**

ISO and IEC draw attention to the fact that it is claimed that compliance with this document may involve the use of patents as indicated below.

ISO and IEC take no position concerning the evidence, validity and scope of these patent rights. The holders of these patent rights have assured ISO and IEC that they are willing to negotiate licenses under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statements of the holders of these patent rights are registered with ISO and IEC.

Intel Corporation has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Intel Corporation  
Standards Licensing Department  
5200 NE Elam Young Parkway  
MS: JFS-98  
USA – Hillsboro, Oregon 97124

Microsoft Corporation has informed IEC and ISO that it has patent applications or granted patents as listed below:

6101499 / US; 6687755 / US; 6910068 / US; 7130895 / US; 6725281 / US; 7089307 / US;  
7069312 / US; 10/783 524 /US

Information may be obtained from:

Microsoft Corporation  
One Microsoft Way  
USA – Redmond WA 98052

Philips International B.V. has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Philips International B.V. – IP&S  
High Tech campus, building 44 3A21  
NL – 5656 Eindhoven

NXP B.V. (NL) has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

NXP B.V. (NL)  
High Tech campus 60  
NL – 5656 AG Eindhoven

Matsushita Electric Industrial Co. Ltd. has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Matsushita Electric Industrial Co. Ltd.  
1-3-7 Shiromi, Chuoh-ku  
JP – Osaka 540-6139

Hewlett Packard Company has informed IEC and ISO that it has patent applications or granted patents as listed below:

5 956 487 / US; 6 170 007 / US; 6 139 177 / US; 6 529 936 / US; 6 470 339 / US; 6 571 388 / US; 6 205 466 / US

Information may be obtained from:

Hewlett Packard Company  
1501 Page Mill Road  
USA – Palo Alto, CA 94304

Samsung Electronics Co. Ltd. has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Digital Media Business, Samsung Electronics Co. Ltd.  
416 Maetan-3 Dong, Yeongtang-Gu,  
KR – Suwon City 443-742

Huawei Technologies Co., Ltd. has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Huawei Technologies Co., Ltd.  
Administration Building, Bantian Longgang District  
Shenzhen – China 518129

Qualcomm Incorporated has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Qualcomm Incorporated  
5775 Morehouse Drive  
San Diego, CA – USA 92121

Telecom Italia S.p.A. has informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Telecom Italia S.p.A.  
Via Reiss Romoli, 274  
Turin - Italy 10148

Cisco Systems informed IEC and ISO that it has patent applications or granted patents.

Information may be obtained from:

Cisco Systems, Inc.  
170 West Tasman Drive  
San Jose, CA – USA 95134

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

## 1 Scope

This service definition is compliant with [1]. It defines a service type referred to herein as Calendar.

This service provides the following functionalities:

- Manage the family calendar events and share calendar events between the family members.
- Calendar events includes Reminders/Alarms/Free-BusyTime.
- Synchronizing the local calendar events with family calendar.
- Registrating for receiving the events notification on WAN side using any kinds of messaging service mechanism.
- Memo handling : Posting simple memos, retrieveing memos.
- Registrating for receiving the memo notifications on the WAN side using any kind of messaging service.

This service does not provide the following functionalities:

- Interaction between Telephony Server and network side calendar service

### 3 Terms, definitions, symbols and abbreviated terms

For the purposes of this document, the terms and definitions given in [1] and the following apply.

#### 3.1 Provisioning terms

##### 3.1.1

##### **conditionally allowed**

##### **CA**

The definition or behavior depends on a condition. If the specified condition is met, then the definition or behavior is allowed, otherwise it is not allowed.

##### 3.1.2

##### **conditionally required**

##### **CR**

The definition or behavior depends on a condition. If the specified condition is met, then the definition or behavior is required, otherwise it is not allowed.

##### 3.1.3

##### **not allowed**

The definition or behavior is prohibited by this specification. Opposite of required.

#### 3.2 Symbols

##### 3.2.1

::

signifies a hierarchical parent-child (parent::child) relationship between the two objects separated by the double colon. This delimiter is used in multiple contexts, for example: Service::Action(), Action()::Argument, parentProperty::childProperty.

#### 3.3 Abbreviated terms

##### 3.3.1

##### **GUI**

Graphical User Interface

**3.3.2****ID**

Identifier

**3.3.3****TC**

Telephony Client

**3.3.4****TelCP**

Telephony Control Point

**3.3.5****TS**

Telephony Server

**3.3.6****VoIP**

Voice over IP

**3.3.7****WAN**

Wide Area Network

**4 Notations and conventions****4.1 Text conventions**

- Strings that are to be taken literally are enclosed in “double quotes”.
- Words that are emphasized are printed in *italic*.
- Keywords that are defined by the UPnP Working Committee are printed using the forum character style.
- Keywords that are defined by [1] are printed using the arch character style.

**4.1.1 Data Types**

This specification uses data type definitions from two different sources. Data types from [1] are used to define state variable and action argument data types [1]. The XML Schema namespace is used to define property data types [9].

For Boolean data types from [1], it is strongly recommended to use the value “0” for false, and the value “1” for true. The values “true”, “yes”, “false”, or “no” may also be used but are not recommended. The values “yes” and “no” are deprecated and shall not be sent out by devices but shall be accepted on input.

For XML Schema defined Boolean data types, it is strongly recommended to use the value “0” for false, and the value “1” for true. The values “true”, “yes”, “false”, or “no” may also be used but are not recommended. The values “yes” and “no” are deprecated and shall not be sent out by devices but shall be accepted on input.

## 4.2 Vendor-defined Extensions

Whenever vendors create additional vendor-defined state variables, actions or properties, their assigned names and XML representation shall follow the naming conventions and XML rules as specified in [1], 2.5, “Description: Non-standard vendor extensions”.

## 5 Service Modeling Definitions

### 5.1 Service Type

The following service type identifies a service that is compliant with this specification:

urn:schemas-upnp-org:service:Calendar:1

Calendar service is used herein to refer to this service type.

### 5.2 Calendar Service Architecture

The Calendar service provides in the UPnP network the overall set of calendar functionalities of a phone (Smart Phone, IP Phone, VOIP Gateways, etc), as a role of a TS.

According to the Telephony architecture in [11], the Calendar service is included in the TS device. More than one Calendar service can coexist in the same UPnP network, it's up to the TelCP to manage multiple Calendar service.

The Calendar service provides a TelCP with the following features:

- Managing the family calendar: managing reminders/ToDo list/Alarms/General Notes.
- Family user can register for events when user is outside of the home via any messaging mechanism.
- Syncing the events with the network calendar service if available.

Figure 1 — Calendar Service Architecture

The UPnP device that implements the Calendar service is capable of accessing features provided by network calendar system through some telecommunication means (e.g. internet based calendar service or network calendar etc.). The interaction with such network based calendar service is out of the scope of this specification.

It is possible to have a local user interface for the *Calendar* service in UPnP server. The local management of *Calendar* service and related features by the end user should be taken into consideration when implementing the *Calendar* service behaviour.

The *Calendar* service consists of three main components.

- **Calendar Objects:** This entity stores all the calendar events
- **Delivery mechanism/TelCP Info:** This entity stores the delivery mechanism (e.g., contact information of the user) to deliver the memo or triggered calendar events when a user is outside the home network. The TelCP info is stored to specify which TelCP controls the particular triggered event.
- ***TriggeredEvent*:** This state variable will be used to notify all triggered event of the calendar for e.g. Alarm Event etc.
- ***MemoInfo*:** This state variable will be used to notify the new memo.

The calendar objects stores all the calendar event in a XML structure. The *Calendar* service follows the structure in [7] for storing the calendar objects. This allows interoperability with the existing calendar application on the device.

### 5.3 State Variables

Note: For first-time reader, it may be more insightful to read the theory of operations first and then the action definitions before reading the state variable definitions.

#### 5.3.1 State Variable Overview

Table 1 — State Variables

Variable Name	R/A <sup>a</sup>	Data Type	Reference
<i>CalendarItem</i>	<i>R</i>	<b>String</b> (XML fragment)	See 5.3.2
<i>TriggeredItem</i>	<i>R</i>	<b>String</b> (XML fragment)	See 5.3.3
<i>MemoInfo</i>	<i>R</i>	<b>String</b> (XML fragment)	See 5.3.4
<i>A_ARG_TYPE_TriggeredItems</i>	<i>A</i>	<b>String</b> (XML fragment)	See 5.3.5
<i>A_ARG_TYPE_CallItems</i>	<i>R</i>	<b>String</b> (XML fragment)	See 5.3.6
<i>A_ARG_TYPE_ItemIDs</i>	<i>R</i>	<b>String</b> (XML fragment)	See 5.3.7
<i>A_ARG_TYPE_Memo</i>	<i>R</i>	<b>String</b>	See 5.3.8
<i>A_ARG_TYPE_MemoID</i>	<i>R</i>	<b>String</b>	See 5.3.9
<i>A_ARG_TYPE_ItemDeliveryMethod</i>	<i>A</i>	<b>String</b> (XML fragment)	See 5.3.10
<i>A_ARG_TYPE_MemoInfoList</i>	<i>A</i>	<b>String</b> (XML fragment)	See 5.3.11
<i>A_ARG_TYPE_TelCPName</i>	<i>A</i>	<b>String</b>	See 5.3.12
<i>A_ARG_TYPE_TelCPNameList</i>	<i>A</i>	<b>String</b>	See 5.3.13
<i>A_ARG_TYPE_Expires</i>	<i>A</i>	<b>ui4</b>	See 5.3.14

<sup>a</sup> *R* = required, *A* = allowed, *CR* = conditionally required, *CA* = conditionally allowed, *X* = Non-standard, add *-D* when deprecated (e.g., *R-D*, *A-D*).

## ISO/IEC 29341-26-15:2017(E)

### 5.3.2 CalendarItem

This state variable includes information of a calendar item. The state variable is an XML document. The calendar item is stored in the format given by [7]. This state variable is evented out when a new calendar event is set or existing calendar item is updated.

#### 5.3.2.1 XML Schema Definition

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for CalendarItem in the XML namespace "urn:schemas-upnp-org:phone:messaging" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

#### 5.3.2.2 Description of fields in the CalendarItem structure

```
<?xml version="1.0" encoding="UTF-8"?>
<calendar:calendarItem
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:calendar="urn:schemas-upnp-org:phone:calendar">
  <calendar:item Itemid="ID of the item" format="RFC5545" TelCPIDs ="ID of the
  TelCPs">
    actual event as per RFC 5545. (textual format)
  </calendar:item>
</calendar:calendarItem>
```

<xml>

Required. Case Sensitive.

<calendarItem>

Required. shall include the namespace declaration for the Calendar service Schema ("urn:schemas-upnp-org:phone:CalendarService"). This namespace "urn:schemas-upnp-org:phone:CalendarService" defines the following elements and attribute

<item>

Required. includes the individual calendar event(object) stored in the format of [7]. The calendar object is stored in the textual format and follow the rule specified in [7].

ItemID

Required. includes the unique identifier for each calendar item stored.

format

Required. specifies the format used to store the calendar item. The value of this attribute shall be "RFC5545".

TelCPID

Allowed. specifies the TelCP who is associated with the calendar item.

### 5.3.3 TriggeredItem

This state variable contains the identifier of the triggered calendar items. When a calendar item is triggered (e.g. Birthday reminder generated) the particular calendar item will be evented to the TelCP(s).

The Calendar service includes triggered calendar item ID in this state variable. So any new triggered events will be evented to all subscribed TelCP. This state variable can be cleared

periodically to clear off the already evented calendar items but this will be up to the implementation of the service.

### 5.3.3.1 XML Schema Definition

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for [TriggeredItem](#) in the XML namespace "urn:schemas-upnp-org:phone:messaging" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

### 5.3.3.2 Description of fields in the [TriggeredItem](#) structure

```
<?xml version="1.0" encoding="utf-8"?>
<calendar:triggeredItem
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:calendar="urn:schemas-upnp-org:phone:calendar">
  <calendar:itemID>ID of the item</calendar:itemID>
</calendar:triggeredItem>
```

```
<xml>
```

Required. Case Sensitive.

```
<triggeredItem>
```

Required. shall include the namespace declaration for the [Calendar](#) service Schema ("urn:schemas upnp org:phone:calendar"). This namespace "urn:schemas upnp org:phone:calendar" defines the following elements and attributes:

```
<itemID>
```

Required. includes the triggered calendar item identifier.

### 5.3.4 [MemoInfo](#)

This state variable is evented when a memo is posted to the Telephony Server (TS). When a memo is posted at the TS, the TS returns the [memoID](#). Once the memo is posted, the TS notifies the memo to all subscribed TelCP. The TS also delivers the memo to the devices that registered with the TS by means of delivery mechanisms.

#### 5.3.4.1 XML Schema Definition

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for [MemoInfo](#) in the XML namespace "urn:schemas-upnp-org:phone:calendar" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

#### 5.3.4.2 Description of fields in the [MemoInfo](#) structure

```
<?xml version="1.0" encoding="utf-8"?>
<calendar:memoInfo
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:calendar="urn:schemas-upnp-org:phone:calendar">
  <calendar:memo>
    <calendar:memoID>ID of the memo</calendar:memoID>
    <calendar:memoText>Content of the memo</calendar:memoText>
  </calendar:memo>
</calendar:MemoInfo>
```

## ISO/IEC 29341-26-15:2017(E)

<xml>

Required. Case Sensitive.

<MemoInfo>

Required. shall include the namespace declaration for the *Calendar* service Schema ("urn:schemas upnp org:phone:calendar"). This namespace "urn:schemas upnp org:phone:calendar" defines the following elements and attributes:

<Memo>

Required. contains the newly posted memo. It includes the following sub elements:

<MemoID>

Required, ID of the memo.

<MemoText>

Required, the content of the memo in text.

### 5.3.5 A ARG TYPE TriggeredItems

This state variable contains the identifier of all the triggered calendar items. This state variable can be cleared periodically to clear off the already evented calendar items but this will be up to the implementation of the service.

#### 5.3.5.1 XML Schema Definition

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for A ARG TYPE TriggeredItems in the XML namespace "urn:schemas-upnp-org:phone:calendar" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

#### 5.3.5.2 Description of fields in the A ARG TYPE TriggeredItems structure

```
<?xml version="1.0" encoding="UTF-8"?>
<calendar:triggeredItems
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:calendar="urn:schemas-upnp-org:phone:calendar">
  <calendar:itemID>ID of the item</calendar:itemID>
  <!-- Any other items (if any) go here.-->
</calendar:triggeredItems>
```

<xml>

Required. Case Sensitive.

<triggeredItem>

Required. shall include the namespace declaration for the *Calendar* service Schema ("urn:schemas upnp org:phone:calendar"). This namespace "urn:schemas upnp org:phone:calendar" defines the following elements and attributes:

<itemID>

Required. includes the triggered calendar item identifiers.

### 5.3.6 A ARG TYPE CallItems

This state variable contains all the calendar items in the TS and their information as defined in [7].

### 5.3.6.1 Description of fields in the A ARG TYPE CallItems

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for A ARG TYPE CallItems in the XML namespace "urn:schemas-upnp-org:phone:calendar" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

```
<?xml version="1.0" encoding="UTF-8"?>
<calendar:calendarItems
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:calendar="urn:schemas-upnp-org:phone:calendar">
  <calendar:item ItemID="item ID" format="RFC5545" TelCPIDs="ID of the TelCPs">
    actual event as per RFC 5545. (textual format)
  </calendar:item>
  <!-- Any other items (if any) go here.-->
</calendar:calendarItems>
```

<xml>

Required. Case Sensitive.

<calendarItem>

Required. shall include the namespace declaration for the Calendar service Schema ("urn:schemas-upnp-org:phone:CalendarService"). This namespace "urn:schemas-upnp-org:phone:CalendarService" defines the following elements and attribute.

<item>

Required. includes the individual calendar event(object) stored in the format of [7]. The calendar object is stored in the textual format and follow the rule specified in [7].

ItemID

Required, includes the unique identifier for each calendar item stored.

format

Required, specifies the format used to store the calendar item. The value of this attribute shall be "RFC5545".

TelCPID

Allowed, specifies the TelCP who is associated with the calendar item.

### 5.3.7 A ARG TYPE ItemIDs

This state variable contains unique identifier for the calendar item to be set in the TS and their information as defined in the CalendarItem state variable.

#### 5.3.7.1 Description of fields in the A ARG TYPE ItemIDs

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for A ARG TYPE ItemIDs in the XML namespace "urn:schemas-upnp-org:phone:calendar" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

```
<?xml version="1.0" encoding="utf-8"?>
<calendar:calendarItemID
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:calendar="urn:schemas-upnp-org:phone:calendar">
  <calendar:itemID>ID of the item</calendar:itemID>
  <!-- Any other items (if any) go here.-->
</calendar:calendarItemID>
```

## ISO/IEC 29341-26-15:2017(E)

<xml>

Required. Case Sensitive.

<calendaritemID>

Required. shall include the namespace declaration for the [Calendar](#) service Schema ("urn:schemas upnp org:phone:calendar"). This namespace "urn:schemas upnp org:phone:calendar" defines the following elements and attributes:

<itemID>

Required. includes the triggered calendar item identifier.

### 5.3.8 [A\\_ARG\\_TYPE Memo](#)

This state variable contains the memo text. The memo is stored as a normal string value.

### 5.3.9 [A\\_ARG\\_TYPE MemoID](#)

This state variable contains a unique identifier for the memo.

### 5.3.10 [A\\_ARG\\_TYPE ItemDeliveryMethod](#)

This state variable specifies the delivery method for a triggered calendar Item or a memo.

#### 5.3.10.1 Description of fields in the [A\\_ARG\\_TYPE ItemDeliveryMethod](#)

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for [A\\_ARG\\_TYPE ItemDeliveryMethod](#) in the XML namespace "urn:schemas-upnp-org:phone:calendar" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

```
<?xml version="1.0" encoding="utf-8"?>
<calendar:ItemDeliveryMethod
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:cams="urn:schemas-upnp-org:phone:calendar">
  <calendar:deliveryMethod ItemID="MemoID or CalendarID">
    <calendar:email>email address</calendar:email>
    <!-- Any other email address (if any) go here.-->
    <calendar:sms>tell uri</calendar:sms>
    <!-- Any other sms id (if any) go here.-->
    <calendar:sip>tell uri</calendar:sip>
    <!-- Any other sip address (if any) go here.-->
    <calendar:sns>
      <calendar:snsName>name of the social network service</calendar:snsName>
      <calendar:snsID>user id of the social network service</calendar:snsID>
    </calendar:sns>
    <!-- Any other sns address (if any) go here.-->
  </calendar:deliveryMethod>
</calendar:ItemDeliveryMethod>
```

<xml>

Required. Case Sensitive.

<ItemDeliveryMethod>

Required. shall include the namespace declaration for the [Calendar](#) service Schema ("urn:schemas upnp org:phone:calendar"). This namespace "urn:schemas upnp org:phone:calendar" defines the following elements and attributes:

<deliveryMethod>

Required. contains mechanisms to deliver memo. This may include the attribute called itemID which will specify the calendar item id or memo id to which this delivery method is applicable. It includes the following sub elements.

ItemID

Allowed. includes the unique identifier for the calendar item or for the Memo. This attribute is included when the TelCP wants to set the delivery method for particular calendar event or particular Memo.

<email>

Allowed, the email id to which the memo will be delivered. This is a multi-valued property.

<sms>

Allowed, the tel-uri to deliver the memo via sms. This is a multi-valued property.

<sip>

Allowed, the sip address to deliver the memo via sip delivery mechanism. This is a multi-valued property.

<sns>

Allowed, the social network service name and address to deliver the memo. This is a multi-valued property.

### 5.3.11 **A ARG TYPE MemoInfoList**

This state variable contains the list of memos posted on a TS.

#### 5.3.11.1 **Description of fields in the A ARG TYPE MemoInfoList**

This is a string containing an XML fragment. The XML fragment in this argument shall validate against the XML schema for **A ARG TYPE MemoInfoList** in the XML namespace "urn:schemas-upnp-org:phone:calendar" which is located at "http://www.upnp.org/schemas/phone/calendar-v1.xsd".

```
<?xml version="1.0" encoding="utf-8"?>
<calendar:memoInfoList
  xsi:schemaLocation="urn:schemas-upnp-org:phone:calendar
  http://www.upnp.org/Schemas/phone/calendar-v1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:calendar="urn:schemas-upnp-org:phone:calendar">
  <calendar:memoList>
    <calendar:memo>
      <calendar:memoID>ID of the memo</calendar:memoID>
      <calendar:memoText>Content of the memo</calendar:memoText>
    </calendar:memo>
    
```

## ISO/IEC 29341-26-15:2017(E)

<memo>

Required. contains information as defined in following sub-elements of a memo.

<memoID>

Required. the ID of the memo.

<memoText>

Required. the content of the memo in texts.

### 5.3.12 A ARG TYPE TelCPName

This state variable describes a unique name for a TelCP. Each TelCP has its own name. A TelCP can register its name to the Calendar service by invoking the RegisterTelCPName() action. It is recommended that this state variable includes human readable and understanding string.

### 5.3.13 A ARG TYPE TelCPNameList

This state variable contains the names of all the TelCPs. The format of this state variable is comma separated values of string.

### 5.3.14 A ARG TYPE Expires

This state variable contains the duration as an integer value.

## 5.4 Eventing and Moderation

Table 2 — Event Moderation

Variable Name	Evented	Moderated Event	Max Event Rate <sup>a</sup> (seconds)	Logical Combination	Min Delta per Event <sup>b</sup>
<u>CalendarItem</u>	<u>YES</u>	<u>YES</u>	1		
<u>TriggeredItem</u>	<u>YES</u>	<u>YES</u>	1		
<u>MemoInfo</u>	<u>YES</u>	<u>YES</u>	1		
<u>A ARG TYPE TriggeredItems</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE CallItems</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE ItemIDs</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE Memo</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE MemoID</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE ItemDeliveryMethod</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE MemoInfoList</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE TelCPName</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE TelCPNameList</u>	<u>NO</u>	<u>NO</u>			
<u>A ARG TYPE Expires</u>	<u>NO</u>	<u>NO</u>			

<sup>a</sup> Determined by N, where Rate = (Event)/(N secs).

<sup>b</sup> (N) \* (allowedValueRange Step).

#### 5.4.1 Eventing of CalendarItem

This state variable can be evented when a new calendar item is set in the Calendar service in the TS. However, this state variable shall not be evented more than once in 1 s. If multiple request arrives within 1 s, then all the events will be accumulated into a single event message and the event message will be sent after 1 s.

#### 5.4.2 Eventing of TriggeredItem

This state variable can be evented when the calendar item is triggered. However, this state variable shall not be evented more than once in 1 s. If multiple request arrives within 1 s, then all the events will be accumulated into a single event message and the event message will be sent after 1 s.

#### 5.4.3 Eventing of MemoInfo

This state variable can be evented when a new memo is added in the Calendar service in the TS. However, this state variable shall not be evented more than once in 1 s. If multiple request arrives within 1 s, then all the events will be accumulated into a single event message and the event message will be sent after 1 s.

### 5.5 Actions

Table 3 lists the actions of the Calendar service.

The Calendar service requires the implementation of all the actions necessary for delivering the complete set of functions.

Table 3 — Actions

Name	Device R/A <sup>a</sup>	Control Point R/A <sup>b</sup>
<u>AddCalendarItems()</u>	<u>R</u>	<u>R</u>
<u>DeleteCalendarItems()</u>	<u>A</u>	<u>A</u>
<u>UpdateCalendarItems()</u>	<u>A</u>	<u>A</u>
<u>GetCalendarItems()</u>	<u>A</u>	<u>A</u>
<u>GetTriggeredItems()</u>	<u>A</u>	<u>A</u>
<u>PostMemo()</u>	<u>R</u>	<u>R</u>
<u>RegisterItemDelivery()</u>	<u>A</u>	<u>A</u>
<u>GetMemo()</u>	<u>A</u>	<u>A</u>
<u>RegisterTelCPName()</u>	<u>A</u>	<u>A</u>
<u>UnregisterTelCPName()</u>	<u>A</u>	<u>A</u>
<u>GetTelCPNameList()</u>	<u>A</u>	<u>A</u>
<p><sup>a</sup> For a device this column indicates whether the action shall be implemented or not, where <u>R</u> = required, <u>A</u> = allowed, <u>CR</u> = conditionally required, <u>CA</u> = conditionally allowed, <u>X</u> = Non-standard, add <u>-D</u> when deprecated (e.g., <u>R-D</u>, <u>A-D</u>).</p> <p><sup>b</sup> For a control point this column indicates whether a control point shall be capable of invoking this action, where <u>R</u> = required, <u>A</u> = allowed, <u>CR</u> = conditionally required, <u>CA</u> = conditionally allowed, <u>X</u> = Non-standard, add <u>-D</u> when deprecated (e.g., <u>R-D</u>, <u>A-D</u>).</p>		

## ISO/IEC 29341-26-15:2017(E)

### 5.5.1 AddCalendarItems()

This action allows aTelCP to store the new calendar items into the TS. The calendar items are stored in the format defined in [7]. This will update the CalendarItem state variable with the new calendar items. The newly added calendar items will be evented to all the subscribed TelCP(s).

#### 5.5.1.1 Arguments

Table 4 — Arguments for AddCalendarItems()

Argument	Direction	relatedStateVariable
<u>CalItems</u>	<u>IN</u>	<u>A_ARG_TYPE_CalItems</u>
<u>ItemIDs</u>	<u>OUT</u>	<u>A_ARG_TYPE_ItemIDs</u>

#### 5.5.1.2 Argument Descriptions

The input argument CalItems contains the calendar item to be set. The calendar item is stored in the format specified in [7].

The output argument ItemID is returned by this service which uniquely identifies the calendar items in the CalendarItem state variable.

#### 5.5.1.3 Service Requirements

None.

#### 5.5.1.4 Control Point Requirements When Calling The Action

None.

#### 5.5.1.5 Dependency on Device State

None.

#### 5.5.1.6 Effect on Device State

None.

#### 5.5.1.7 Errors

Table 5 — Error Codes for AddCalendarItems()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
701	Calendar Format Not Supported	calendar item format not supported.
702	Error in Calendar item	Represents errors in the calendar items.
703	Internal Error	Not able to create the calendar item due to internal errors.

**5.5.2 DeleteCalendarItems()**

This action allows a TelCP to delete existing calendar items from the TS. The input argument ItemIDs identify the calendar items to be deleted.

**5.5.2.1 Arguments**

**Table 6 — Arguments for DeleteCalendarItems()**

Argument	Direction	relatedStateVariable
<u>ItemIDs</u>	<u>IN</u>	<u>A_ARG_TYPE ItemIDs</u>

**5.5.2.2 Argument Descriptions**

The input argument ItemIDs identifies the calendar items to be deleted.

**5.5.2.3 Service Requirements**

None.

**5.5.2.4 Control Point Requirements When Calling The Action**

None.

**5.5.2.5 Dependency on Device State**

None.

**5.5.2.6 Effect on Device State**

None.

**5.5.2.7 Errors**

**Table 7 — Error Codes for DeleteCalendarItems()**

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
704	Calendar Item does not exist	Calendar item represented by itemID does not exist.

**5.5.3 UpdateCalendarItems()**

This action allows a TelCP to update the existing calendar items from the the TS. The input argument Caltems identifies the calendar items to be updated.

**5.5.3.1 Arguments**

**Table 8 — Arguments for UpdateCalendarItems()**

Argument	Direction	relatedStateVariable
----------	-----------	----------------------

## ISO/IEC 29341-26-15:2017(E)

Argument	Direction	relatedStateVariable
<u>Caltems</u>	<u>IN</u>	<u>A_ARG_TYPE_Caltems</u>

### 5.5.3.2 Argument Descriptions

The input argument Caltems contains the calendar item to be set. The calendar item is stored in the format specified in [7]. The Caltems includes the ItemID of the calendar item to be updated.

### 5.5.3.3 Service Requirements

None.

### 5.5.3.4 Control Point Requirements When Calling The Action

None.

### 5.5.3.5 Dependency on Device State

None.

### 5.5.3.6 Effect on Device State

None.

### 5.5.3.7 Errors

Table 9 — Error Codes for UpdateCalendarItems()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
701	Calendar Format Not Supported	calendar item format not supported.
702	Error in Calendar item	Represents errors in the calendar items.
703	Internal Error	Not able to create the calendar item due to internal errors.
704	Calendar Item does not exist	Calendar item to be updated does not exist.

### 5.5.4 GetCalendarItems()

This action allows a TelCP to retrieve existing calendar items from the TS. The input argument ItemIDs identify the calendar items to be retrieved.

#### 5.5.4.1 Arguments

Table 10 — Arguments for GetCalendarItems()

Argument	Direction	relatedStateVariable
----------	-----------	----------------------

Argument	Direction	relatedStateVariable
<u>ItemIDs</u>	<u>IN</u>	<u>A_ARG_TYPE_ItemIDs</u>
<u>Calltems</u>	<u>OUT</u>	<u>A_ARG_TYPE_Calltems</u>

#### 5.5.4.2 Argument Descriptions

The input argument ItemIDs identify the calendar items to be retrieved.

The output argument Calltems include all the calendar items requested by the TelCP.

#### 5.5.4.3 Service Requirements

None.

#### 5.5.4.4 Control Point Requirements When Calling The Action

None.

#### 5.5.4.5 Dependency on Device State

None.

#### 5.5.4.6 Effect on Device State

None.

#### 5.5.4.7 Errors

Table 11 — Error Codes for GetCalendarItems()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
704	Calendar Item does not exist	Calendar Item represented by ItemIDs does not exist.

#### 5.5.5 GetTriggeredItems()

This action allows a TelCP to retrieve the triggered calendar items from the TS.

##### 5.5.5.1 Arguments

Table 12 — Arguments for GetTriggeredItems()

Argument	Direction	relatedStateVariable
<u>TriggeredItemIDs</u>	<u>OUT</u>	<u>A_ARG_TYPE_TriggeredItems</u>

##### 5.5.5.2 Argument Descriptions

The output argument TriggeredItemIDs identifies the triggered calendar items.

## ISO/IEC 29341-26-15:2017(E)

### 5.5.5.3 Service Requirements

None.

### 5.5.5.4 Control Point Requirements When Calling The Action

None.

### 5.5.5.5 Dependency on Device State

None.

### 5.5.5.6 Effect on Device State

None.

### 5.5.5.7 Errors

Table 13 — Error Codes for GetTriggeredItems()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.

### 5.5.6 PostMemo()

This action allows a TelCP to post a memo on the TS which will be notified to all subscribed TelCPs by the TS. A TS may decide to store the memo. However, this behavior is implementation specific and so is also how long the memo will be kept on the TS.

#### 5.5.6.1 Arguments

Table 14 — Arguments for PostMemo()

*Argument	Direction	relatedStateVariable
<u>Memo</u>	<u>IN</u>	<u>A_ARG_TYPE_Memo</u>
<u>MemoID</u>	<u>OUT</u>	<u>A_ARG_TYPE_MemoID</u>

#### 5.5.6.2 Argument Descriptions

The input argument Memo contains the content of the memo to be notified to all subscribed TelCPs.

The output argument MemoID contains a unique ID assigned to the memo by the TS for the specific memo.

#### 5.5.6.3 Service Requirements

The behavior of the TS about storing the memo is implementation specific. The TS may decide to delete the memo instantaneously as soon as it is notified to all subscribed TelCPs. In which case, if the UPnP action is invoked to retrieve that specific memo will fail.

**5.5.6.4 Control Point Requirements When Calling The Action**

The TelCP invoke this action when it wants to send a memo to all subscribed TelCPs.

**5.5.6.5 Dependency on Device State**

None.

**5.5.6.6 Effect on Device State**

None.

**5.5.6.7 Errors**

**Table 15 — Error Codes for PostMemo()**

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
705	Could not post the memo	The TS is unable to post the memo due to some internal problem.

**5.5.7 RegisterItemDelivery()**

This action allows a TelCP to register a delivery method to receive memo or triggered calendar notifications from the home network. A user may want to receive memo or triggered calendar notifications to a mobile device while the user is outside of the home network. This action allows the user to register address and delivery mechanism with the TS to receive memo or triggered calendar notifications to a user preferred delivery mechanism when the user is outside the home network. A user can select more than one delivery methods such SMS and email etc.

**5.5.7.1 Arguments**

**Table 16 — Arguments for RegisterItemDelivery()**

Argument	Direction	relatedStateVariable
<u>ItemDeliveryMethod</u>	<u>IN</u>	<u>A_ARG_TYPE_ItemDeliveryMethod</u>
<u>Expires</u>	<u>IN</u>	<u>A_ARG_TYPE_Expires</u>

**5.5.7.2 Argument Descriptions**

The input argument ItemDeliveryMethod contains the delivery method by which memo or triggered calendar items will be notified to the registered device. The delivery method could be email, SMS etc.

The input argument Expires contains the duration for which this registration is valid. The registration will expire and the user will no longer receive the notifications once the duration expires with his preferred memo delivery mechanism. If the value of Expires is set to "0" then the TS unregistered the delivery mechanism.

## ISO/IEC 29341-26-15:2017(E)

### 5.5.7.3 Service Requirements

None

### 5.5.7.4 Control Point Requirements When Calling The Action

The TelCP shall invoke this action periodically to keep registration active before the duration expires.

### 5.5.7.5 Dependency on Device State

None.

### 5.5.7.6 Effect on Device State

None.

### 5.5.7.7 Errors

Table 17 — Error Codes for RegisterItemDelivery()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
704	Calendar Item does not exist	The calendar item does not exist.
706	Invalid Delivery Methods	One or more delivery methods weren't registered.

### 5.5.8 GetMemo()

This action allows a TelCP to retrieve memo from the TS. This action will return the list of memos posted on the TS if the input argument is MemorID null otherwise this action will return only the memo identified by the MemorID.

#### 5.5.8.1 Arguments

Table 18 — Arguments for GetMemo()

Argument	Direction	relatedStateVariable
<u>MemorID</u>	<u>IN</u>	<u>A_ARG_TYPE_MemorID</u>
<u>MemoInfoList</u>	<u>OUT</u>	<u>A_ARG_TYPE_MemoInfoList</u>

#### 5.5.8.2 Argument Descriptions

The input argument MemorID contains the identification of the memo. A null value is allowed.

The output argument MemoInfoList contains the list of memos posted in the TS. If the input argument MemorID contains a valid id for a memo, then the output argument only returns the memo identified by the MemorID otherwise the output contains all the memos stored in the TS.

**5.5.8.3 Service Requirements**

None.

**5.5.8.4 Control Point Requirements When Calling The Action**

None.

**5.5.8.5 Dependency on Device State**

None.

**5.5.8.6 Effect on Device State**

None.

**5.5.8.7 Errors****Table 19 — Error Codes for GetMemo()**

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
707	Memo does not exist	The memo identified by the memo id does not exist.

**5.5.9 RegisterTelCPName()**

This action allows a TelCP to register its user friendly name to the TS. The input argument TelCPName includes the TelCPName to be registered to the TS.

**5.5.9.1 Arguments****Table 20 — Arguments for RegisterTelCPName()**

Argument	Direction	relatedStateVariable
<u>TelCPName</u>	<i>IN</i>	<i>A_ARG_TYPE_TelCPName</i>

**5.5.9.2 Argument Descriptions**

The input argument TelCPName contains the user friendly name to be registered with the Calendar service.

**5.5.9.3 Service Requirements**

This service shall check the uniqueness of the TelCP name when a TelCP invokes this action to register a TelCPName.

**5.5.9.4 Control Point Requirements When Calling The Action**

None.

## ISO/IEC 29341-26-15:2017(E)

### 5.5.9.5 Dependency on Device State

None.

### 5.5.9.6 Effect on Device State

None.

### 5.5.9.7 Errors

Table 21 — Error Codes for RegisterTelCPName()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
708	Invalid TelCP	The specified TelCPName is not valid.
709	TelCPName already exists	The specified TelCPName is already in use.

### 5.5.10 UnregisterTelCPName()

This action allows a TelCP to unregister its TelCP name. The input argument TelCPName includes the user friendly name to be unregistered from the TS. If this action is invoked without registering the TelCPName then the action fails with an error code.

#### 5.5.10.1 Arguments

Table 22 — Arguments for UnregisterTelCPName()

Argument	Direction	relatedStateVariable
<u>TelCPName</u>	<u>IN</u>	<u>A_ARG_TYPE_TelCPName</u>

#### 5.5.10.2 Argument Descriptions

The input argument TelCPName contains the name to be unregister.

#### 5.5.10.3 Service Requirements

None.

#### 5.5.10.4 Control Point Requirements When Calling The Action

None.

#### 5.5.10.5 Dependency on Device State

None.

#### 5.5.10.6 Effect on Device State

None.

## 5.5.10.7 Errors

Table 23 — Error Codes for UnregisterTelCPName()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
708	Invalid TelCPName	The specified TelCPName is invalid.

5.5.11 GetTelCPNameList()

This action allows a TelCP to get all registered TelCP names with Calendar service.

## 5.5.11.1 Arguments

Table 24 — Arguments for GetTelCPNameList()

Argument	Direction	relatedStateVariable
<u>TelCPName</u>	<u>OUT</u>	<u>A_ARG_TYPE_TelCPNameList</u>

## 5.5.11.2 Argument Descriptions

The output argument TelCPNameList includes the list of TelCP name registered with the Calendar service.

## 5.5.11.3 Service Requirements

None.

## 5.5.11.4 Control Point Requirements When Calling The Action

None.

## 5.5.11.5 Dependency on Device State

None.

## 5.5.11.6 Effect on Device State

None.

## 5.5.11.7 Errors

Table 25 — Error Codes for GetTelCPNameList()

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.

## ISO/IEC 29341-26-15:2017(E)

### 5.5.12 Error Code Summary

Table 26 lists error codes common to actions for this service type. If an action results in multiple errors, the most specific error should be returned.

Table 26 — Error Code Summary

ErrorCode	errorDescription	Description
400-499	TBD	See UPnP Device Architecture clause on Control.
500-599	TBD	See UPnP Device Architecture clause on Control.
600-699	TBD	See UPnP Device Architecture clause on Control.
700		Reserved for future extensions.
701	Calendar Format Not Supported	calendar item format not supported.
702	Error in Calendar item	Represents errors in the calendar items.
703	Internal Error	Not able to create the calendar item due to internal errors.
704	Calendar Item does not exist	Calendar item does not exist.
705	Could not post the memo	The TS is unable to post the memo due to some internal problem.
706	Invalid Delivery Methods	One or more delivery methods weren't registered.
707	Memo does not exist	The memo identified by the memo id does not exist.
708	Invalid TelCP	The specified TelCPName is not valid.
709	TelCPName already exists	The specified TelCPName is already in use.

Note: 800-899 Error Codes are not permitted for standard actions. See Control clause in [1] for more details.

### 5.6 Service Behavioral Model

None.

## 6 XML Service Description
