INTERNATIONAL STANDARD

ISO 10787-1

Textile machinery and accessories — Heald frames —

Part 1:
Heald-carrying rod fixed to the frame stave by rod support — Coordinated dimensions

Matériel pour l'industrie textile — Cadres de lisses —

Partie 1: Tringles porte-lisses fixées aux liteaux par porte-tringles — Dimensions interdépendantes

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10787-1 was prepared by Technical Committee ISO/TC 72, *Textile machinery and allied machinery and accessories*, Sub-committee SC 3, *Machinery for fabric manufacture*.

This first edition of ISO 10787-1 cancels and partially replaces ISO 568:1976 and ISO 569:1982, which have been technically revised and expanded.

ISO 10787 consists of the following parts, under the general title *Textile machinery and accessories — Heald frames*:

— *Part 1: Heald-carrying rod fixed to the frame stave by rod support — Coordinated dimensions*

— *Part 2: Heald-carrying rod fixed directly on the frame stave — Coordinated dimensions*

— *Part 3: Guides for heald frames*

Annex A of this part of ISO 10787 is for information only.

Textile machinery and accessories — Heald frames —

Part 1:
Heald-carrying rod fixed to the frame stave by rod support — Coordinated dimensions

1 Scope

This part of ISO 10787 specifies the coordinated dimensions of heald frames on which the heald-carrying rod is fixed to the frame stave by rod support.

2 Normative reference

The following standard contains provisions which, through reference in this text, constitute provisions of this part of ISO 10787. At the time of publication, the edition indicated was valid. All standards are subject to revision, and parties to agreements based on this part of ISO 10787 are encouraged to investigate the possibility of applying the most recent edition of the standard indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 2768-1:1989, *General tolerances — Part 1: Tolerances for linear and angular dimensions without individual tolerance indications.*
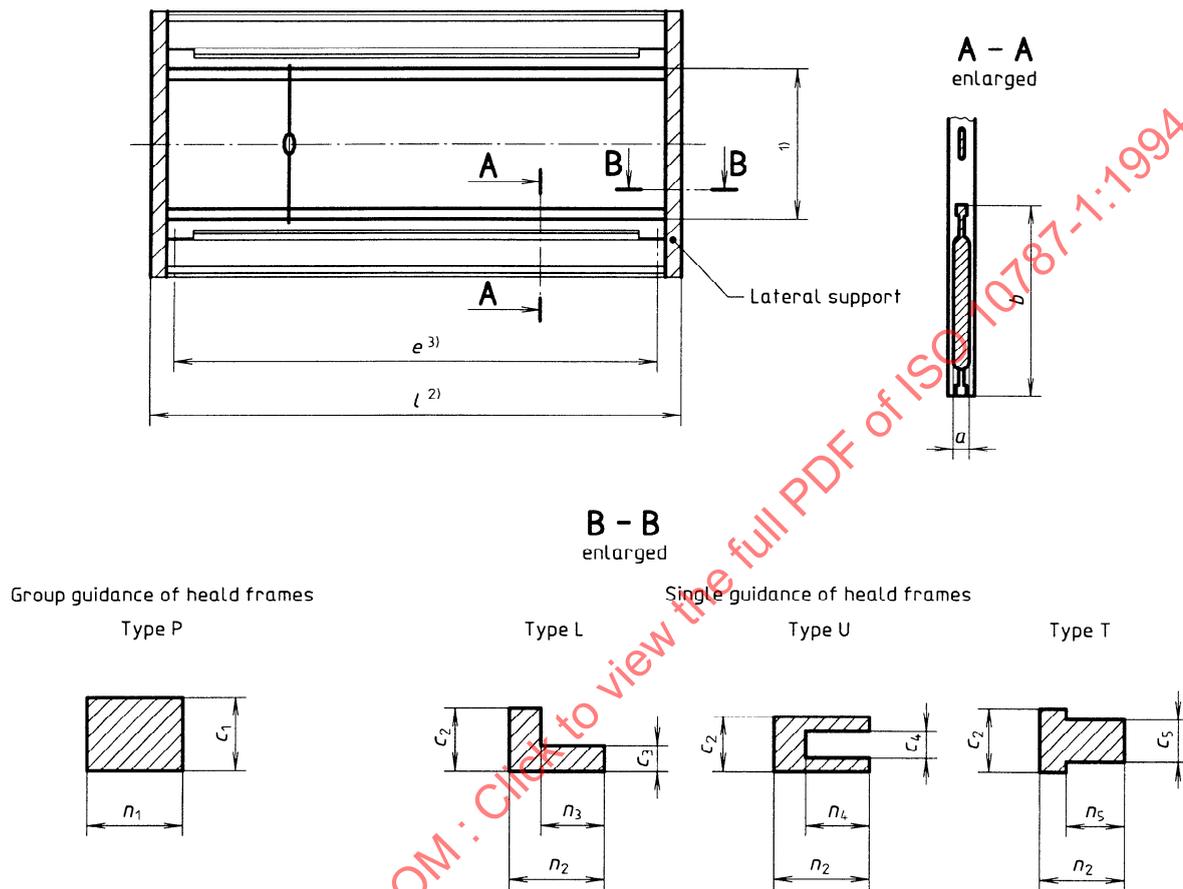

3 Heald frame

Figures 1 and 2 and table 1 define and specify the dimensions of heald frames on which the heald-carrying rod is fixed to the frame stave by rod support.

4 Bushes

4.1 Bushes inside the upper and lower frame staves are shown in figures 3 and 4 respectively. Their position is given in tables 2 and 3.

4.2 Bushes outside the upper and lower frame staves are shown in figures 5 and 6 respectively. Their position is given in tables 2 and 3.

4.3 The construction of bushes is shown in figures 7 and 8 and bush dimensions are specified in table 4.

Group guidance of heald frames

Type P

Single guidance of heald frames

Type L   Type U   Type T

1) The distance between heald-carrying rods depends on the distance L between end loops of healds.

2) The width l of the heald frame depends on the construction of the weaving machine and should therefore be agreed upon between machine manufacturer and purchaser.

3) The working width e of the heald frame is equal to the working length of the heald-carrying rods on which the healds are strung.

	18															

1) Pitch t of the harness: distance between the midpoints of two adjacent heald frames of a harness in a weaving machine. Normally the pitch of the harness is equal to the pitch of the shedding motion, i.e. the distance between the midpoints of the needles in the dobby or other driving mechanism of the heald frames. Dimensions shown in parentheses should be avoided for new constructions.

Dimensions in millimetres

		96		216	269	241	294	266	319	286	339	336	394

1) Tolerances are given in ISO 2768-1, tolerance class fine.

Table 3 — Heald frames with rail guide without rider

Dimensions in millimetres

Cross-section of heald-carrying rod		b	u	Positions of bushes											
k [1]	s [1]	nom.	± 0,5	m_1 ± 0,5	m_2 ± 0,5	m_1 ± 0,5	m_2 ± 0,5	m_1 ± 0,5	m_2 ± 0,5	m_1 ± 0,5	m_2 ± 0,5	m_1 ± 0,5	m_2 ± 0,5	m_1 ± 0,5	m_2 ± 0,5
				Nominal distance L between end loops of healds [2]											
				280		(306)		331		(356)		382		407	
22	1,7	72		197	250	210	263	222	275	235	288	247	300	260	313
16	2,1														
22	1,7	84	72 75 80	209	262	222	275	234	287	247	300	259	312	272	325
16	2,1														
22	1,7	96		221	274	234	287	246	299	259	312	271	324	284	337
16	2,1														

1) Tolerances are given in ISO 2768-1, tolerance class fine. Heald-carrying rods 22 mm × 1,7 mm are suitable for healds with C-shaped end loops; heald-carrying rods 16 mm × 2,1 mm are suitable for healds with J-shaped end loops.

2) Dimensions shown in parentheses should be avoided. The distances between end loops are derived from inch dimensions.

Table 4 — Bush dimensions

Dimensions in millimetres

Bush			Pitch of harness
d_1 [1]	d_2 [1]	h	t
C9	C9	± 0,1	nom.
16	20	7,5	12, 14 or 18
20	20	7,5	12 or 14
		10	14, 16 or 18
20	20	12	18
20	20	16	24

1) Tolerance for the corresponding bolt: f7.
