Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO 15011-4:2006 was prepared by the European Committee for Standardization (CEN) in collaboration with ISO Technical Committee TC 44, *Welding and allied processes*, Subcommittee SC 9, *Health and safety*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

Requests for official interpretations of any aspect of this Amendment to ISO 15011-4:2006 should be directed to the Secretariat of ISO/TC 44/SC 9 via your national standards body. A complete listing of these bodies can be found at www.iso.org.

Health and safety in welding and allied processes — Laboratory method for sampling fume and gases —

Part 4: Fume data sheets

AMENDMENT 1

Page iv, Foreword

In the listing of parts, delete

“— *Part 3: Determination of ozone concentration using fixed point measurements*”

Insert

“— *Part 3:—¹⁾, Determination of ozone emission rate*”

Insert “[Technical Specification]” at the end of the title of Part 5.

Insert at the end of the list

“The following part is planned:

— *Part 6: Procedure for quantitative determination of fume from resistance spot welding [Technical Specification]”*

Add a final paragraph:

“Requests for official interpretations of any aspect of this part of ISO 15011 should be directed to the Secretariat of ISO/TC 44/SC 9 via your national standards body. A complete listing of these bodies can be found at www.iso.org.”

Page 6, Table 3, column 3, row 5, entitled “Voltage”

Replace the text with the following:

“For solid wires, use open-arc conditions.

For argon-based and helium-based shielding gases, establish spray arc conditions at the prescribed current, reduce the arc voltage until there is a small amount of audible crackle or hiss and then increase the voltage slightly until the crackle is no longer audible (adjusting the wire feed speed to restore the test current, as necessary).

1) To be published. (Revision of ISO 15011-3:2002)

For CO₂, set the prescribed current and adjust the voltage to establish smoothest metal transfer, as determined by an experienced welder.”

Page 23, Annex G

In the three boxes under the heading “Optional additional section of the fume data sheet”, replace all four references to “0a” by “1a”.
