
**Acoustics — Laboratory tests on noise
emission from appliances and equipment
used in water supply installations —**

Part 3:

**Mounting and operating conditions for
in-line valves and appliances**

AMENDMENT 1

*Acoustique — Mesurage en laboratoire du bruit émis par les
robinetteries et les équipements hydrauliques utilisés dans les
installations de distribution d'eau —*

*Partie 3: Conditions de montage et de fonctionnement des robinetteries
et des équipements hydrauliques en ligne*

AMENDEMENT 1

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO 3822-3:1997 was prepared by Technical Committee ISO/TC 43, *Acoustics*, Subcommittee SC 2, *Building acoustics*.

Introduction

EN 1567:1999¹⁾ specifies only a Q_N ; Q_2 and Q_1 are not specified. For example, the Q_N given for DN15 is 0,35 l/s, which is lower than $Q_2 = 0,38$ l/s as specified in ISO 3822-3:1997, Table 2. This amendment makes ISO 3822-3:1997 compatible with EN 1567:1999.
