FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

Prior to 1972, the results of the work of the technical committees were published as ISO Recommendations; these documents are in the process of being transformed into International Standards. As part of this process, Technical Committee ISO/TC 72, *Textile machinery and accessories*, has reviewed ISO Recommendation R 573-1967 and found it technically suitable for transformation. International Standard ISO 573 therefore replaces ISO Recommendation R 573-1967, to which it is technically identical.

ISO Recommendation R 573 had been approved by the member bodies of the following countries :

Chile	Greece	Spain
Czechoslovakia	India	Switzerland
Egypt, Arab Rep. of	Korea, Rep. of	Turkey
France	Netherlands	United Kingdom
Germany	Poland	U.S.S.R.

No member body had expressed disapproval of the Recommendation.

The member body of the following country disapproved the transformation of the Recommendation into an International Standard :

Germany

Textile machinery and accessories – Dobby lags and pegs in wood, metal or other suitable material – Dimensions

1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies the dimensions of doobby lags and pegs in wood, metal or other suitable material, for use in the textile industry.
