Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: Foreword - Supplementary information.

The committee responsible for this document is ISO/TC 79, *Light metals and their alloys*, Subcommittee SC 6, *Wrought aluminium and aluminium alloys*.

This third edition cancels and replaces the second edition (ISO 6361-3:2011), which has been technically revised.

ISO 6361 consists of the following parts, under the general title *Wrought aluminium and aluminium alloys — Sheets, strips and plates*:

- *Part 1: Technical conditions for inspection and delivery*
- *Part 2: Mechanical properties*
- *Part 3: Strips: Tolerances on shape and dimensions*
- *Part 4: Sheets and plates: Tolerances on shape and dimensions*
- *Part 5: Chemical composition*

Wrought aluminium and aluminium alloys — Sheets, strips and plates —

Part 3: Strips: Tolerances on shape and dimensions

1 Scope

This part of ISO 6361 specifies the tolerances on shape and dimensions for wrought aluminium and aluminium alloy strip by cold-rolling for general engineering applications.

It applies to products with thickness of over 0,15 mm up to, and including 16 mm.

It does not apply to semi-finished rolled products in coiled form to be subjected to further rolling (reroll stock), or to special products such as those that are corrugated or embossed.

Technical conditions for inspection and delivery of products covered by this part of ISO 6361 are specified in ISO 6361-1.

2 Dimensional tolerances

2.1 Thickness

Thickness tolerances shall be in accordance with [Tables 1](#) and [2](#).

When the tolerance is specified as either all plus, or minus side, the value in [Table 1](#), or in [Table 2](#), shall be doubled.

Tolerances for the products exceeding the range of specified thickness and width shall be agreed upon by the purchaser and the supplier.

8,0	11	±0,48	±0,48	±0,48	±0,48	±0,51	±0,51	±0,58	±0,58	±0,64	±0,64	±0,66	±0,84	
11	16	±0,64	±0,64	±0,64	±0,64	±0,64	±0,64	±0,64	±0,76	±0,76	±0,76	±0,89	±0,89	

2.2 Width

Width tolerances shall be in accordance with Table 3.

When the tolerance is specified as either all plus, or minus side, the value in Table 3 shall be doubled.

Tolerances for the products exceeding the range of specified thickness and width shall be agreed upon by the purchaser and the supplier.

Table 3 — Width tolerance for strip

Dimensions in millimetres

Specified thickness		Specified width					
Over	Up to and including	Up to and including 150	Over 150, up to and including 300	Over 300, up to and including 600	Over 600, up to and including 1 200	Over 1 200, up to and including 1 500	Over 1 500, up to and including 2 600
		Tolerance					
≥ 0,15	3,2	±0,3	±0,4	±0,8	±1,2	±1,6	±3,2
3,2	5,0	±0,3	±0,5	±0,8	±1,6	±2,4	
5,0	6,3	±0,4	±0,8	±1,2	±2,4	±3,2	

3 Shape tolerances

The lateral curvature is the depth of the arc for any 2 000 mm basis lengths (see Figure 1).

Key

- a* deviation from straightness (maximum value)
- b* width
- c* 2 000 mm

Figure 1 — Lateral curvature of strip

When tested with the strip resting on a flat surface, against a straight edge, the lateral curvature shall not exceed the values given in [Table 4](#) for a value of length $L = 2\ 000$ mm.

The maximum value for the products exceeding the range of specified thickness and width shall be agreed upon between the purchaser and the supplier.

Table 4 — Lateral curvature tolerances for strip

Dimensions in millimetres

Specified thickness		Specified width				
Over	Up to and including	15 or over, up to and including 25	Over 25, up to and including 50	Over 50, up to and including 100	Over 100, up to and including 250	Over 250, up to and including 2 600
Maximum value (in any 2 000 length)						
≥ 0,15	1,6	19	15	10	7	5
1,6	3,2			10	7	5
