Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 7044 was developed by Technical Committee ISO/TC 2, *Fasteners*, and was circulated to the member bodies in December 1981.

It has been approved by the member bodies of the following countries:

Australia	Germany, F.R.	New Zealand
Belgium	Hungary	Norway
Brazil	India	Poland
Canada	Ireland	Romania
China	Italy	South Africa, Rep. of
Czechoslovakia	Japan	Spain
Denmark	Korea, Dem. P. Rep. of	Sri Lanka
Egypt, Arab Rep. of	Korea, Rep. of	Sweden
Finland	Mexico	Switzerland
France	Netherlands	USA

The member bodies of the following countries expressed disapproval of the document on technical grounds:

United Kingdom
USSR

Prevailing torque type all-metal hexagon nuts with flange

1 Scope and field of application

This International Standard specifies the characteristics of prevailing torque type all-metal hexagon nuts with flange and thread sizes from M 5 to M 20 inclusive, in product grade A.

NOTE — The dimensions of the nuts correspond to those given in ISO 4161 plus prevailing torque feature.

If other specifications are required, it is recommended that they should be selected from existing International Standards, for example ISO 261, ISO 898, ISO 965, ISO 2320, ISO 4759/1.

1) The size in brackets should be avoided if possible.

2) P = pitch of the thread.

3) Also minimum thread height.

4) Minimum wrenching height (m' min. = T_a max. — see annex).

5) Radius applies both at the corner and the flats of the hexagon.
