## CONTENTS

### VOLUME I DATA ELEMENTS

1.	INTRODUCTION	1
1.1.	Scope, content and sources	1
1.2.	References	2
1.2.1.	International Standards	2
1.2.2.	UN and UN/CEFACT Recommendations	3
1.3.	Definitions	3
1.4.	Abbreviations	4
1.5.	Character sets	4
1.6.	Explanation of the contents of the Directory	5
1.7.	Presentation of data elements in the Directory	5
1.8.	Availability of the UNTDED and ISO 7372	5
2.	MAINTENANCE OF THE TRADE DATA ELEMENTS DIRECTORY	6
2.1.	Introduction	6
2.2.	Role of the Maintenance Agency	6
2.3.	Membership	6
2.3.1.	Inter-governmental and non-governmental bodies	7
2.3.2.	International Organization for Standardization	7
2.3.3.	Associate members	7
2.3.4.	External expertise	8
2.3.5.	Maintenance Agency Secretariat (MAS)	8
2.4.	Rules of procedure	8
2.4.1.	Proposals for changes, additions or deletions	8
2.4.2.	Changes to TDED	8
2.4.2.1.	Change of the name or description of an existing data element	8
2.4.2.2.	Change in the concept of a data element	9
2.4.2.3.	Addition of data elements	9
2.4.2.4.	Deletion of data elements	9
2.4.3.	Technical Assessment Checklist (TAC)	9
2.5.	Consultation of members of the MA	9
2.6.	Voting procedures	10
2.7.	Implementation of approved amendments	10
3.	INDEXES [reserved for future use]	11

4	DATA ELEMENTS	12
4.1	Presentation, descriptions of categories, abbreviations	12
4.1.1	Layout of data element entries	12
4.1.2	Abbreviations of character representations	13
4.1.3	References concerning character representations	14
4.1.4	Grouping of data elements into broad categories	14
4.1.5	Explicit cross-referencing between data elements and codes: () and []	16
4.1.6	Categories of data elements, allocation of identifiers (tags)	17
4.1.7	Data element issue numbering	17
4.2	Trade Data Elements Directory TDED	18
4.2.0	(0001-0699) Service data elements	18
4.2.1	(1000-1699) documentation, references	18
4.2.2	(2000-2699) Dates, times, periods of time	18
4.2.3	(3000-3699) Parties, addresses, places, countries	18
4.2.4	(4000-4699) Clauses, conditions, terms, instructions	18
4.2.5	(5000-5699) Amounts, charges, percentages	18
4.2.6	(6000-6699) Measure identifiers, quantities (other than monetary)	18
4.2.7	(7000-7699) Goods and articles: descriptions and identifiers	19
4.2.8	(8000-8699) Transport modes, means and equipments	19
4.2.9	(9000-9699) Other data elements (Customs, etc.)	19

<b>VOLUME II USER CODE LIST</b>
---------------------------------

Vol. II is the User Code list, part of UNCL (UN Code lists) of UN/EDIFACT directory

**D.02A. Sample:**

-----  
 \* 3035 Party function code qualifier  
 Desc: Code giving specific meaning to a party.  
 Repr: an..3

[...]

BY Buyer

(3002) Party to whom merchandise and/or service is sold.

[...]

-----]

<b>VOLUME III COMPENDIUM OF TRADE FACILITATION RECOMMENDATIONS</b>
--

This Compendium of UNECE Trade Facilitation Recommendations includes Class 3 **code lists** as for example:

UNECE Rec. #	ISO #	Name
3	3166	ISO Country Code for Representation of Names of <b>Countries</b>
5		Abbreviations of <b>INCOTERMS</b>
7	8601	Numerical Representation of <b>Dates, Time and Periods of Time</b>
9	4217	Alphabetic Code for the Representation of <b>Currencies</b>
16		LOCODE - Code for <b>Ports and other Locations</b>
17		PAYTERMS - Abbreviations for Terms of Payment
19		Codes for <b>Modes of Transport</b>
20	1000	Codes for <b>Units of Measurement</b> used in International Trade
21		Codes for <b>Types of Cargo, Packages and Packaging Materials</b>
23		<b>Freight Cost Code</b> – FCC
24		Trade and Transport Status Codes
28		Codes for Types of means of transport

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International Organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 7372 was prepared jointly with the United Nations Economic Commission for Europe (UNECE) and adopted by Technical Committee ISO/TC 154, *Processes, data elements and documents in commerce, industry and administration*, as the Trade Data Elements Directory (TDED); and is maintained by a joint ISO-UNECE Maintenance Agency (see section 2).

This third edition cancels and replaces the second edition (ISO 7372:1993).

This International Standard adopted by the technical committee has been circulated to the member bodies for voting and formally adopted by ISO and by the UN compliant to the procedures of each.

When producing this edition of the Trade Data Elements Directory, the Maintenance Agency has delivered a directory that is:

- supporting the UN Layout Key for Trade Documents (ISO6422) by registering data elements that can be conveyed in such documents
- fully consistent with the set of UN/EDIFACT directories supporting electronic data interchange, especially with the EDIFACT Data Element Directory (EDED) and the UN Codes Library (UNCL).
- multimodal (all means of transport); (uni)modal requirements are satisfied by using business terms or synonyms, and not by specific entries; multimodal requirements are satisfied by generic entries
- multisectoral (trade/transport/Customs/etc.)
- technology and syntax independent
- ebXML Core Components Technical Specification compliant, providing the core component dictionary entry name with 1) object class, 2) property term and 3) representation term, and support the Controlled Vocabulary with list of permissible words
- backward compatible wherever possible and allows a migration path from previous editions; when an element (a duplicate) has been marked for deletion a preferred element is recommended.

Achieving the last point was crucial to ensuring consistency among the directories and also with the data elements of other international organizations. Developments in international trade since the publication of the previous edition of the TDED in 1993 resulted in some incompatibility with other UN publications. This current revision of the TDED has

eliminated the inconsistencies and again secured the bi-directional references by the use of round and square brackets in the UN/EDIFACT UNCL code list, and similar notations in the TDED. Changes made in the TDED, for example the removal of duplicate data elements, are fully reflected in the EDIFACT Directories and Code Lists.

This approach should provide the framework that reduces the risk of divergence between the publications in the future.

The main resources used in this revision were: UN/EDIFACT D.02A edition, UN/CEFACT TBG3 (Transport), the International Maritime Organization (IMO), the World Customs Organization Customs Data Model Version 1 (2002), UNCTAD ASYCUDA and the joint UNeDocs SITPRO project team. In summer 2004, at the time of the finalisation of the draft for this new edition of TDED, the targets as listed above have been met within the framework of the resources and time available.

During the revision process, the Maintenance Agency has developed data element names which fully comply with the naming rules defined by ISO 11179, and required by the ebXML Core Components Technical Specification. The Maintenance Agency will submit these compliant data elements to UN/CEFACT for Core Component harmonization.

Throughout the production process the Maintenance Agency continually updated the revision drafts and performed numerous quality checks and public reviews.

Additionally, the Maintenance Agency reviewed and revised the procedures for submitting Data Maintenance Requests (DMRs). The MA recognized that its work must be as universal as possible; and consequently cooperated closely with the following bodies:

- UN/CEFACT Forum: TBG, ATG, ICG and their Regional Entry Points: UN/EDIFACT and XML DMR procedures
- UN/CEFACT Forum TMG : ebXML CCTS WG DMR procedures
- OASIS UBL TC DMR procedures
- ISO9735 JSWG Joint Syntax WG DMR procedures
- WCO Customs Data Model DMR procedures
- UNCTAD ASYCUDA DMR procedures
- As well as other Maintenance Agency members' DMR procedures as UIC for CIM, IATA for CIMP and IMO for FAL.

Management and registration of aggregates, composites and other combinations of single TDED entries are outside the scope of the Maintenance Agency; this work is the responsibility of standardization bodies such as JTC1/SC32 and UN/CEFACT TBG17 (Harmonization).

Last, but not least, all members of the Maintenance Agency kept clearly in mind that the best is the enemy of the good, and that some revisions and improvement to the TDED could have a significant migration cost for some users. To assist users in migration, explicit paths have been provided, especially for the deleted entries. Items in the previous version which were inconsistently tagged (e.g. wrong Group, or wrong even/uneven tag) have not been corrected, except when an explicit business requirement had been identified. In this way, the Maintenance Agency did its utmost to meet the needs of members and TDED users.

\* \* \*

## Section

### 1. INTRODUCTION

#### 1.1. Scope, content and sources

The standard data elements included in this Directory are intended to facilitate an open interchange of data in international trade.

These standard data elements can be used with any method for data interchange on paper documents as well as with other means of data processing and communication: they can be selected for transmission one by one, or used within a particular system of interchange rules, e.g. the United Nations rules for Electronic Data Interchange for Administration, Commerce and Transport (UN/EDIFACT), developed within the UN/CEFACT of the United Nations Economic Commission for Europe (UNECE) and published as International Standard ISO9735.

This Directory has been compiled by the TDED Maintenance Agency (see Section 2 below), on the basis of the work within this UN/CEFACT, as well as work within other Maintenance Agency members as specially WCO and IMO. This edition has been adopted by Technical Committee ISO/TC 154 and the UN/CEFACT.

**Volume I** of the Directory constitutes International Standard **ISO 7372**. Annexes A, B, C and D of this International standard are for information only.

**Volume II** includes the **User Code List**. The preparation and maintenance of Vol. II is an activity of the UN/CEFACT.

**Volume III** is a Compendium of **Trade Facilitation Recommendations**. The preparation and maintenance of Vol. III is a joint activity of the UNECE and the UN Conference on trade and Development (UNCTAD), Special Programme for Trade Efficiency (SPTE).

The main **source** of this edition of TDED is the set of UN/EDIFACT directories **D.02A**:

- **Vol. I** has been built as a true **superset** of D.02A EDED = data elements
- **Vol. II** is a straight forward **subset** of D.02A UNCL = codes.

This third edition supersedes the second, 1993 edition of the TDED.

## 1.2. References

### 1.2.1. International Standards (1)

The following standards contain provisions, which, through reference in this text, constitute provisions of this International Standard. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

Dates provided in the table below are based upon checking the ISO website 2004-09-08

ISO 216:1975	Writing paper and certain classes of printed matter - Trimmed sizes - A and B series
ISO 639-1:2002 ISO 639-2:1998	Codes for the representation of names of languages -- Part 1: Alpha-2 code -- Part 2: Alpha-3 code
ISO 1000:1992 and Amd 1:1998	SI units and recommendations for the use of their multiples and of certain other units
ISO/IEC 2382-1:1993	Information technology -- Vocabulary -- Part 1: Fundamental terms
ISO 2784:1974	Continuous forms used for information processing - Sizes and sprocket feed holes
ISO 2955:1983	Information processing - Representation of SI and other units for use in systems with limited character sets (Withdrawn)
ISO 3166-1:1997 ISO 3166-2:1998 ISO 3166-3:1999	Codes for the representation of names of countries and their subdivisions -- Part 1: Country codes -- Part 2: Country subdivision code -- Part 3: Code for formerly used names of countries
ISO 3535:1977	Forms design sheet and layout chart
ISO 4217:2001	Codes for the representation of currencies and funds
ISO 6346:1995	Freight containers - Coding, identification and marking
ISO 6422:1985	Layout Key for trade documents
ISO 8601:2004	Data elements and interchange formats - information interchange – representation of dates and times
ISO/IEC 8859-1:1998 ISO/IEC 8859-2:1999 ISO/IEC 8859-5:1999 ISO/IEC 8859-7:2003	Information processing - 8 bit single-byte coded graphic character sets- Part 1: Latin alphabet No. 1 Part 2: Latin alphabet No. 2 Part 5: Latin/Cyrillic alphabet Part 7: Latin/Greek alphabet
ISO 9735:2002-1/10	Electronic data interchange for administration, commerce and transport (EDIFACT) -- Application level syntax rules

(1) Available from the International Organization for Standardization (ISO), 1, Rue de Varembeé CH - 1211 Geneva 20

### 1.2.2. UN and UN/CEFACT Recommendations (2)

Recommendation No. 1	United Nations Layout Key for Trade Documents; reflected as ISO 6422:1985, 8439:1990 and 8440:1986 and Corr.1:2000
Recommendation No. 6	Aligned Invoice Layout Key for International Trade
Recommendation No. 8	Unique Identification Code Methodology – UNIC
Recommendation No. 11	Documentary Aspects of the International Transport of Dangerous Goods
Recommendation No. 12	Measures to Facilitate Maritime Transport Documents Procedures
Recommendation No. 15	Simpler Shipping Marks
Recommendation No. 22	Layout Key for Standard Consignment Instructions
Recommendation No. 25	Use of the United Nations Electronic Data Interchange for Administration, Commerce and Transport (UN/EDIFACT)

### 1.3. Definitions

For the purpose of this International Standard, the following definitions apply.

**1.3.1. alphabetic character set:** a character set that contains letters and may contain control characters, and special characters, but not digits (Source: ISO 2382/4).

**1.3.2. alphanumeric character set:** a character set that contains both letters and digits and may contain control characters, and special characters (Source: ISO 2382/4).

**1.3.3. blank (Character):** a character that represents an empty position in a graphic character string (Source: ISO 2382/4)

**1.3.4. character:** a member of a set of elements that is used for the representation, organization, or control of data (Source: ISO 2382/4).

**1.3.5. character set:** a finite set of different characters that is complete for a given purpose (Source: ISO 2382/4).

**1.3.6. code:** a collection of rules that maps the data elements of one set on to the elements of a second set (Source: ISO 2382/4).

**1.3.7. data:** a representation of facts, concepts or instructions in a formalized manner suitable for communication, interpretation or processing by human beings or by automatic means (Source: ISO 2382/1).

**1.3.8. data element:** a unit of data that in a certain context is considered indivisible (Source: ISO 2382/4). Unit of data described in a data element specification (Source: ISO 9735:2002)

---

(2) Available from the UN/ECE Trade Division, Palais des Nations CH-1211, Geneva 10 (Volume III of UNTDED)

**1.3.9. data element tag:** a unique identifier for a data element in a data elements directory (Source: ISO 9735:1988).

**1.3.10. data element value:** specific instance of a simple data element, represented as specified in a simple data element specification and, if the simple data element is coded, in a code list (Source: ISO 9735:2002).

**1.3.11. data element value length:** the number of characters in a data element value (Source: ECE).

**1.3.12. digit (Numeric character):** a graphic character that represents a non-negative integer (Source: ISO 2382/4).

**1.3.13. letter:** a graphic character that, when appearing alone or combined with others, is primarily used to represent a sound element of a spoken language (Source: ISO 2382/4).

**1.3.14. numeric character set:** a character set that contains digits and may contain control characters and special characters, but not letters (Source: ISO 2382/4).

**1.3.15. special character:** a graphic character that is not a letter, a digit, or blank character, and usually not an ideogram (Source: ISO 2382/4).

## 1.4. Abbreviations

The following acronyms or abbreviations are used for making reference to documents, conventions and interchange standards:

AWB	IATA Air Waybill
CIM	Rail Consignment Note (CIM Convention)
CIMP	IATA Cargo Interchange Message Procedures Manual (CARGO-IMP manual)
CMR	Road Consignment Note (CMR Convention)
EC	European Communities
EFTA	European Free Trade Association
IATA	International Air Transport Association
ICC	International Chamber of Commerce (ICC)
INV	United Nations Layout Key for Aligned Invoices
MAR	IMO Model forms and ICS Standard Bill of Lading
SAD	Single Administrative Document (EC and EFTA)
SWIFT	Society for Worldwide Interbank Financial Telecommunication
UNLK	United Nations Layout Key
UNSM	United Nations Standard Message (UN/EDIFACT)

## 1.5. Character sets

The characters in ISO 8859 shall be used for the representation of the data elements in this Directory.

## 1.6. Explanation of the contents of the Directory

In addition to this introduction, the Directory contains the following sections:

- Section 2 provides rules and procedures for maintenance.
- Section 3 reserved for future indexes
- Section 4 is the main part of the Directory and contains the complete list of standard data elements presented as described in 1.6 and 1.7 hereafter. In principle, each entry in this part should be self-contained and consultation of other parts of the Directory or outside sources should be required only exceptionally;

## 1.7. Presentation of data elements in the Directory

Each identified data element has been given:

- a) a data element name;
- b) a description of the concept to explain the agreed meaning and to aid in determining the content of the information (data value) to be provided with the data element;
- c) a specification of the character representation of the data value, with indication of space (in number of characters) available and location in aligned forms, and of field lengths where such have been established in particular interchange protocols;

and, when applicable or required:

- 1) notes providing additional information;
- 2) references to other parts of the Directory, or to other sources, as appropriate;
- 3) synonyms of data element names where such are widely used.

The values of a data element can either be expressed in plain language or in code, and it is recognized that there will be a need to refer to either of these versions, and sometimes to both.

## 1.8. Availability of the UNTDED and ISO 7372

- The UNTDED (Vol. I) can be obtained from the ECE/TRADE Division, Palais des Nations, CH-1211 Geneva 10 ,Fax: +41 22 9170037.
- ISO 7372 is available from ISO Central Secretariat, 1, Rue de Varembe, CH-1211 Geneva 20.

## Section

### 2. MAINTENANCE OF THE TRADE DATA ELEMENTS DIRECTORY

Volume I of TDED is continuously updated, based on a review by the Maintenance Agency. Amendments and additions are subsequently incorporated in the Directory.

#### 2.1. Introduction

A joint UNECE - ISO Maintenance Agency is entrusted with the maintenance of the Trade Data Elements Directory (**TDED**), also known as the United Nations Trade Data Elements Directory (**UNTDDED**) and as the International Standard **ISO 7372**, in order to keep UNTDDED/ISO7372 up to date to meet changing or new requirements in trade. The membership and procedures of the MA, as set out below, have been designed to reflect the dual nature of the TDED as an intergovernmental recommendation and a non-governmental ISO International Standard.

The ISO Council, in accordance with the provisions of Annex 1G of the Directives for the technical work of ISO, has designated an ISO 7372 Maintenance Agency (**ISO 7372/MA**). The ISO 7372/MA together with the maintenance function set up by the UNECE WP.4 Working Party on Facilitation of International Trade Procedures (now UNECE CEFACT), jointly constitute the TDED Maintenance Agency, hereafter referred to as MA.

#### 2.2. Role of the Maintenance Agency

The MA, as authorized by the UNECE WP.4 and by the ISO Council, is entrusted with the following functions:

- a) To add to or to eliminate data elements from TDED and to assign numeric identifiers (tags) in accordance with the rules provided in Section 5 of TDED;
- b) To inform interested parties appropriately of such changes, etc.;
- c) To prepare periodically and disseminate amendment sheets to users in order to allow proper up-dating of TDED;
- d) To establish as required, in the normal course of work, additional rules for the practical application of the principles for:
  - selecting data elements and assigning them a name and a numeric identifier (tag);
  - grouping data elements into broad categories;
  - the presentation of standard data elements and their use for international trade information interchange.

#### 2.3. Membership

The secretariat of UNECE and the ISO Central Secretariat participate ex officio in the MA, whose membership - besides the UNECE WP4 Working Party on Facilitation of International

Trade Procedures, now UN/CEFACT, its Forum and empowered groups - is composed of inter-governmental and non-governmental bodies and of representatives of ISO national Member Bodies, of ISO TCs (Technical Committees) and ISO/IEC JTC1 SCs (Sub-Committees) concerned, as set out below, each being entitled to appoint one official participant (head of delegation).

### 2.3.1. Inter-governmental and non-governmental bodies

The following inter-governmental and non-governmental bodies have requested to be associated with the maintenance work:

- CCC *Customs Cooperation Council: use WCO*
- CIT International Railway Transport Committee
- FIATA International Federation of Freight Forwarders Associations
- IATA International Air Transport Association
- ICC International Chamber of Commerce
- ICS International Chamber of Shipping
- IMO International Maritime Organization
- IRU International Road Transport Union
- OASIS Organization for the Advancement of Structured Information Standards [UBL TC Universal Business Language Technical Committee]
- UIC International Union of Railways
- UN/CEFACT UNECE (Economic Commission for Europe) Centre for Trade Facilitation and Electronic Business
- UNCTAD United Nations Conference on Trade and Development
- UPU Universal Postal Union
- WCO World Customs Organization, established as CCC

### 2.3.2. International Organization for Standardization

The membership of the ISO 7372/MA shall be open to one official representative (head of delegation) from each of the ISO Member bodies being ISO/TC154 P members

and the following technical bodies:

- ISO/TC37 Terminology and other language resources
- ISO/TC46 Information and documentation
- ISO/TC68 Financial services
- ISO/TC154 Processes, data elements and documents in commerce, industry and administration
- ISO/TC184 Industrial automation systems and integration
- ISO/TC204 Intelligent transport systems
- ISO/TC215 Health informatics
- ISO/IEC JTC1/SC31 Automatic identification and data capture techniques
- ISO/IEC JTC1/SC32 Data management and interchange

### 2.3.3. Associate members

At the proposal of MA, other international organizations may be invited to become associate members of the MA and to appoint a representative.

#### **2.3.4. External expertise**

The MA is authorized to seek external expert advice where necessary.

#### **2.3.5. Maintenance Agency Secretariat (MAS)**

The United Nations Economic Commission for Europe (UNECE), through the Trade Division and the International Organization for Standardization (ISO) jointly provide the secretariat for the MA.

The responsibilities of the MAS are:

- To receive proposals for changes and additions to, or deletions of, data elements in TDED;
- To make appropriate suggestions or proposals and to circulate them to MA members for comments and/or decision within a specified period of time;
- To maintain a master of the TDED.

### **2.4. Rules of procedure**

#### **2.4.1. Proposals for changes, additions or deletions**

Proposals for changes and additions to, or deletions of, data elements in the TDED can be received from:

- any ISO member body;
- any government and international organization member of UN/CEFACT;
- any other international organization representing users of the directory;

and shall be submitted to the MAS, using the TDED Change request form. This form can be obtained from the ISO/TC154 web: <http://www.iso.org/tc154> .

Any proposals for changes, additions or deletions which have a bearing on an existing data element used in UN/EDIFACT should be submitted by the MA to the UN/EDIFACT maintenance procedures.

Any proposals for changes, additions or deletions of a data element used in UN/EDIFACT which have a bearing on an existing non-UN/EDIFACT data element in TDED should be submitted to the MA.

#### **2.4.2. Changes to TDED**

As a general principle, to ensure continuity and stability in the TDED, changes should be kept to a minimum.

##### **2.4.2.1. Change of the name or description of an existing data element**

If the concept of the data element is not affected, a change of the name or description of an existing data element will not result in a change of the already assigned numeric identifier (tag).

The previous name will be cross-referenced.

If it is proposed to change the name or description of a data element in such a way that, without substantially changing the concept, its application area is extended or further clarified, the numeric identifier may be retained provided that there are no objections from users who might be adversely affected by the change.

#### **2.4.2.2. Change in the concept of a data element**

A change in a concept of a data element will result in the assignment of a new numeric identifier.

The previous concept and identifier will be retained for a transitional period of time, to be determined in each case after consultation with users.

#### **2.4.2.3. Addition of data elements**

Any new data element agreed upon by the MA for inclusion in the TDED will be assigned a numeric identifier within the group to which the data element belongs. This applies also to provisional data elements.

#### **2.4.2.4. Deletion of data elements**

Data elements marked for deletion (with only tag, name and date of deletion) shall stay forever in the Directory, with provision of the migration path “use instead: ...”. Hence the numeric identifier of a data element marked for deletion shall not be re-used for a new data element.

#### **2.4.3. Technical Assessment Checklist (TAC)**

The MA, recognizing that:

- its Data Maintenance Request (DMR) procedures shall be predictable, fully documented and transparent,
- the best available tool is the Core Component Technical Assessment Checklist (cc TAC, see ISO/TS15000-5 ebXML CCTS), and that in addition,
- the ISO 7372/MA DMR procedures shall be, where relevant, fully consistent with the UN/CEFACT DMR procedures,

the MA resolved to have the possibility of issuing and applying a Technical Assessment Checklist (TAC) for the production of a later edition of TDED.

#### **2.5. Consultation of members of the MA**

Proposals received by the MAS shall be circulated to MA members along with suggestions by the secretariat as appropriate, for response within a specified period of time, normally not less than two months. The need for MA members to institute internal consultations before committing themselves will be taken into account by the MAS in determining the time for response.

Before circulating a proposal, the MAS shall endeavour to assess the implications of this proposal on data element applications, which are known to it. For this purpose, the MA

through the MAS may consult directly users of the TDED, national facilitation bodies and other interested parties, as required.

If an urgent need arises for the introduction of a new data element, or for change of an existing one, the MAS is authorized to accept a proposal on a provisional basis, subject to subsequent considerations as set out above, and on conditions that the proposing party accepts the possibility of rejection of, or amendment to, the proposal in the course of normal procedure.

## **2.6. Voting procedures**

Agreement on proposals is obtained either by correspondence or at a meeting of the MA, provided that the matter has been included in the draft agenda of the meeting.

In accordance with ISO rules, as far as the ISO members of the MA are concerned, decisions shall be reached by a vote. Each ISO member of the MA has one vote. An associate member has the same status as an ordinary member but does not participate in voting.

In cases of urgency, the views of the members of the MA may be obtained by telephone; these should be confirmed in writing, by e-mail or similar means.

Failure to reply within the reply period specified is considered as an abstention.

Decisions of the MA should be supported by a substantial majority of its members.

If a substantial majority is not achieved, the voting will be repeated or considered at a following meeting of the MA. The letter ballot shall be accompanied by all comments received from the first vote and a MAS recommendation. Time for response: one month. In determining the outcome of the second vote, the majority is calculated on the basis of expressed affirmative and negative votes.

If voting is repeated on individual proposals this procedure shall not delay publication of those proposals, which have gained the necessary support. In cases where it has not been possible to accept a proposal, the submitter of the proposal shall be informed of the reasons.

## **2.7. Implementation of approved amendments**

An amendment (i.e. change, addition or deletion) becomes effective when approved by the MA and will be published as often as required and possible, but not more often than annually.

The availability of amendments to ISO 7372 shall be announced to the ISO member bodies and to UNECE users by the MAS.

Practical arrangements for the preparation, reproduction and dissemination of TDED and amendment sheets to TDED shall be the responsibility of the secretariat of UNECE.

### 4 DATA ELEMENTS

#### 4.1 Presentation, descriptions of categories, abbreviations

##### 4.1.1 Layout of data element entries

All names and definitions in TDED shall comply with the Oxford English Dictionary (both spelling and meanings).

The first line of each data element entry contains the numeric tag and the name of the data element and elements belonging to the United Nations Trade Data Interchange Directory (UNTDID) are noted with an "E" (see section 1.8).

In addition, and in accordance with the principles set out in section 1.6, each data element entry contains a number of parts, identified by a header. The following headers are used to designate the different parts of the entries:

<b>Desc</b>	= description of the data element
<b>Repr</b>	= character representation, space available and location of the data entry, as explained below
<b>Note</b>	= additional information, when appropriate
<b>Ref</b>	= reference to an indicated source of information in cases where a "Note" is not sufficient. (Reference to other sections in the Directory is normally indicated by "cf" and the section number.)
<b>Syn</b>	= synonymous names of the data element

A line separates data element entries from each other. Data elements with directly related clear text (even tag number) and coded (the next odd number) value representations appears one after the other.

The change indicator marks shall be:

<b>add</b>	= added
<b>cn</b>	= changed name
<b>cnd</b>	= changed name + description
<b>cnr</b>	= changed name + representation
<b>cndr</b>	= changed name + desc. + repr.
<b>x</b>	= marked for deletion (with tag + name)
<b>u</b>	= undeleted (re-instated)

Change indicator marks for deleted and undeleted data elements are now:

In 1990 and 1993 editions		In 2005 edition	Change indicator shall be
active entry	=>	<i>deleted entry</i>	<b>x</b>
<i>deleted entry</i>	=>	active entry	<b>u</b>
<i>deleted entry</i>	=>	<i>deleted entry</i>	<b>x</b>

That means that the mfd change indicator shall not anymore be used

#### 4.1.2 Abbreviations of character representations

The following abbreviations are used to explain character representation:

<b>a</b>	=	alphabetic characters
<b>n</b>	=	numeric characters
<b>an</b>	=	alphabetic and numeric characters
<b>3</b>	=	fixed length of 3 characters
<b>..17</b>	=	variable data unit size where "17" indicates the maximum number of available character positions;
<b>..35x5</b>	=	undefined length where space is available to accommodate up to 5 lines of 35 characters each;
<b>..35xn</b>	=	undefined length where the data item requires an undefined number of lines of up to 35 characters each
<b>an5 (aanmn)</b>	=	fixed length of 5 alphanumeric characters, with 2 alphabetic characters to be followed by 3 numeric digits, in that order, without separation
<b>an5 (aa-nn)</b>	=	fixed length of 5 alphanumeric characters, composed of two sub-elements as shown, with mandatory separation by hyphen ( - )
<b>n7 (nn,nnnn,n)</b>	=	fixed length of 7 numeric digits, composed of three sub-elements as shown, without mandatory separation; the comma ( , ) indicates the division between the sub-elements
<b>(n2) a3</b>	=	fixed length of 3 alphabetic characters, to be preceded by another data element of 2 numeric digits;
<b>L</b>	=	line, to be followed by the line number (or numbers) for the data entry according to ISO 3535 and the UNLK
<b>P</b>	=	position, to be followed by the character position number (or numbers) for the data entry according to ISO 3535 and UNLK

### 4.1.3 References concerning character representations

When character representation is specified, using these abbreviations, it refers either to the space available for the data entry, and the location of the entry in the United Nations Layout Key (UNLK), or in another aligned international document referred to, or to the representation in an identified interchange protocol.

Whenever line and character positions are given for data elements appearing in internationally-established, aligned forms, this is done with a view either to confirm conformity to the UNLK, or to indicate deviations from the UNLK, or differences between such forms.

If fixed field lengths have been specified in a particular interchange protocol, this will be shown after an acronym, e.g. SWIFT: n6, CIMP: an..12, UNSM: an5. This is done mainly to indicate possible constraints for data items likely to be transmitted through such systems. In some instances organizations have introduced sectoral codes other than those recommended within UNECE. Such cases are indicated by reference to the relevant organization or Convention, e.g. currency code in Rail Consignment Note: CIM n2.

The acronyms used to reference documents, conventions, and interchange standards are listed in section 1.4. Entry location abbreviations are listed in 4.1.2.

In specifications of character representation and entry location in aligned forms, these acronyms are used as follows:

- a) Representation and location unique for AWB:  
Repr: AWB: a2; L 24, P 49-50
- b) Representation and location in AWB deviates from general UNLK-based standard:  
Repr: n..10; L 54-60, P 49-56  
- AWB: n..8; L 33-44, P 39-46
- c) Representation in AWB and CMR follows general standard but location is specific for each document:  
Repr: an..17; L 04, P 63-80  
- AWB: L 01, P 08-22  
- CMR: L 59, P 20-26
- d) Representation in AWB follows general standard but differs in CIM:  
Repr: n..14  
- AWB: L 60, P 09-22  
- CIM: an..8; L 49, P 51-58

### 4.1.4 Grouping of data elements into broad categories

As set out in 1.8, the data elements have been grouped into broad categories in a way that will assist users of the Directory, at the same time taking into account the need to reserve substantial capacity for national and company use.

This version of the directory does not include the service data elements (tags **0001-0699**), as they are provided within the ISO9735 EDIFACT Syntax, version 4 release 1 Part 10, 2002.

The following grouping is used in the Directory:

#### **Group 1**

##### **(1000-1699) documentation, references**

Data elements intended for data handling or documentation purposes, such as those required to service the interchange of user data, document and message names, references and reference numbers, ordinal numbers such as item and page numbers, number of copies of documents;

#### **Group 2**

##### **(2000-2699) Dates, times, periods of time**

All expressions of time, such as calendar dates, periods of time (month, week, day), time limits, commencement and expiry dates;

#### **Group 3**

##### **(3000-3699) Parties, addresses, places, countries**

Names and addresses of legal and physical persons, designations of officials, organizational units, places, countries, routes;

#### **Group 4**

##### **(4000-4699) Clauses, conditions, terms, instructions**

Authentications, authorizations, endorsements, certifications, clauses, conditions, terms, reference clauses, stamps, labels, requests, instructions, receipts, statements, information texts;

#### **Group 5**

##### **(5000-5699) Amounts, charges, percentages**

Financial values, amounts, charges; other quantities and values for commercial, transport, Customs, statistical and any other purposes; other details, such as prices, rates, percentages and discounts, used as a basis for invoice calculations, etc.;

#### **Group 6**

##### **(6000-6699) Measure identifiers, quantities (other than monetary)**

Dimensions, weights, volumes, distances, temperature, currency, other quantities, with the exception of monetary quantities in Group 5, measure unit specifiers;

#### **Group 7**

##### **(7000-7699) Goods and articles: descriptions and identifiers**

Descriptions, classifications and identification of goods and articles, consignment identifiers, number and kind of packages, dangerous goods details;

#### **Group 8**

##### **(8000-8699) Transport modes, means and equipments**

Identification and description of means of transport and transport equipments (including containers), transport equipment details, transport modes and movements, voyage and flight numbers;

#### **Group 9**

##### **(9000-9699) Other data elements (Customs, etc.)**

Data elements not belonging to any of the specific categories 1 - 8.

The system selected for the Directory for grouping data elements into broad categories is based on the characteristics of the data item, taking into account its nature rather than its

application area. This means that all dates are placed in one group, all names in another, and all amounts in a third, without any consideration of the kind of date, name and amount.

Users, even if they do not know the exact name of a data element, or in which application area a particular data element might have been placed, are likely to know the expected contents of the data item with sufficient accuracy to be able to find it within a limited range of not more than one hundred data elements placed together according to this principle.

Attention is drawn to the allocation of tag numbers in each category.

- Up to **699** are reserved for allocation by the TDED Maintenance Agency.
- Tags **700 to 799** are used in message under development and are allocated by the submitter.
- Tags from **800 upwards** are for use within national or regional message development groups.

#### 4.1.5 Explicit cross-referencing between data elements and codes: () and []

In UN/EDIFACT UNCL Code List, the following rules apply:

“1.3 If a generic data element combined with a qualifier value is **identical** to an existing specific data element in TDED, then the description of the qualifier code value starts with the tag of the specific data element in **[square brackets]**. Example:

```
3035 Party function code qualifier
...
    BB Buyer's bank
       [3420] Bank employed by the buyer to make payment.
```

**[3420]** indicates that 3420 is a specific data element in the current Trade Data Element Directory (TDED):

```
3420 Buyer's bank
Desc: Bank employed by the buyer to make
      payment.
```

1.4 If a generic data element combined with a qualifier value is identical to an existing specific data element in TDED but the specific data element gives information which is normally provided in EDIFACT messages in associated separate data elements, then only the **functional meaning** is copied and the description of the qualifier code value starts with the tag of the specific data element in **(round brackets)**. Example:

3035 Party function code qualifier

...

AL Principal  
**(3340)** Party accepting liability for goods held or moving (e.g. transit) under a Customs authorization and - when applicable - a guarantee.

**(3340)** indicates that 3340 is a specific data element in the current UNTDED:

**3340** Principal responsible party  
 Desc: Name and address of a party accepting etc.

This rule has now been applied similarly in TDED, allowing the same flagging, but the other way round.”

#### 4.1.6 Categories of data elements, allocation of identifiers (tags)

Four-digit numbers are used as data element identifiers (tags) in the Directory. Taking into account the desirability of grouping the data elements into broad categories in a way that will assist users of the Directory, and also the need to reserve substantial capacity for national and company use, numbers have been assigned as follows, within the framework of a sub-division into 9 general categories.

**Even tag** numbers are used to designate the plain language representation of the data item (which includes numerical values other than codes), whereas the following odd, **uneven** number is reserved for the coded representation, when applicable, of the same data element, e.g. 4460 Payment means; 4461 Payment means, coded.

##### For Identifiers

- identifiers, also alpha-numerical ones, should have an **odd** tag (except for sequence identifiers, having an even tag)
- the preceding **even** number should not be used, except if a text version is required.

Existing entries not compliant with this rule should be corrected only if an explicit business need has been identified, asking for such a change.

The purpose of the tags is to provide language independent identifiers for the data elements; the only significance attributed to the numbers is their designation of broad categories and the indication of plain language and coded version.

Tagging rules specific to some data elements groups are provided below.

#### 4.1.7 Data element issue numbering

Data elements used in UNSMs are identified by an "E" in front of the issue number. This information is available only from the source database. These data elements are also included in the United Nations Trade Data Interchange Directory (UNTDID), Part 5, Chapter 6, EDED.

Each data element has been given an issue number:

- a) for data elements used in UNSMs (identified by "E") version/release control is reflected in data elements 0052 and 0054 and is based on changes to UN/EDIFACT directory version/release procedures.
- b) for other data elements the year of introduction into TDED or of amendment, (e.g. 87).

## 4.2 Trade Data Elements Directory TDED

### 4.2.0 (0001-0699) Service data elements

not included in this edition, as provided by ISO9735 EDIFACT Syntax;

### 4.2.1 (1000-1699) documentation, references

### 4.2.2 (2000-2699) Dates, times, periods of time

For **date and time**:

- the **even** tag should be given to the possible **clear** "*date time text*" version of this data element,
- the following **uneven** tag should be given to the usual "*date time*" **numerical value** of this data element, with the leading representations being (see ISO8601:2004):
  - n8 for YYYYMMDD or
  - an17 for YYYYMMDDHHMMThmm.

Existing entries not compliant with this rule should be corrected only if an explicit business need has been identified, asking for such a change.

### 4.2.3 (3000-3699) Parties, addresses, places, countries

### 4.2.4 (4000-4699) Clauses, conditions, terms, instructions

### 4.2.5 (5000-5699) Amounts, charges, percentages

### 4.2.6 (6000-6699) Measure identifiers, quantities (other than monetary)

For **amounts, measures and quantities** as identified in Groups 5000 and 6000:

- the **even** tag should be given to the possible **clear text** version of this data element,
- the following **uneven** tag should be given to the usual **numerical value** of this data element.

Existing entries not compliant with this rule should be corrected only if an explicit business need has been identified, asking for such a change.

When decimal mark and minus sign are used, each takes one character position. This is not included in the specification of number of characters for representation of data element values and must be taken into consideration in data processing and printing.

The position of decimal marks in numeric values is not specified and may be between any of the figures in the amount as required. Systems sometimes require a more specific approach

and, to assist designers who prefer to specify the decimal position, the following table may serve as guidance.

Weights	3 decimals
Cubes	4 decimals
Other quantities	3 decimals
Unit prices	4 decimals
Other amounts	3 decimals
Currency rates	6 decimals
Percentages	4 decimals
Tax rates	4 decimals

**4.2.7 (7000-7699) Goods and articles: descriptions and identifiers**

**4.2.8 (8000-8699) Transport modes, means and equipments**

**4.2.9 (9000-9699) Other data elements (Customs, etc.)**

**Trade Data Elements Directory TDED**

The main 9 attributes of TDED, as provided in the table below, are:

1. informative Change indicator:
  - add added
  - cn changed name
  - cnd changed name + description
  - cnr changed name + representation
  - cndr changed name + desc. + repr.
  - x marked for deletion (with tag + name)
  - u undeleted (re-instated)
2. normative Tag (UID unique identifier)
3. informative New name = Dictionary entry name = object class + property term + representation term, concatenated in one cell, without repeated words
4. normative Description (definition, free text)
5. informative Main representation
6. normative Old name from ISO7372:1993 (without any change)
7. informative Business term (synonym)
8. informative Note (specially for the « x » => « use instead ... »)
9. informative location/links, bridges to UNCL

All other attributes are informative, stored in the master database available from the ISO/TC154 web ( <http://www.iso.org/tc154> ), and will be updated and made available to users.

Change indic.	Tag UID	New Name	Description	repr.	Old name	Business Term	Notes	Locations, Bridges
