Descriptors : earth handling equipment, bolts, shape, dimensions.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 7852 was developed by Technical Committee ISO/TC 127, *Earth-moving machinery*, and was circulated to the member bodies in December 1982.

It has been approved by the member bodies of the following countries :

Australia	Egypt, Arab Rep. of	Sweden
Austria	Italy	United Kingdom
Belgium	Japan	USA
Brazil	Mexico	USSR
Bulgaria	Poland	
Czechoslovakia	Romania	

No member body expressed disapproval of the document.

Earth-moving machinery — Plough bolt heads — Shapes and dimensions (excluding thread dimensions)

1 Scope and field of application

This International Standard specifies the shapes and lays down the dimensions of the heads of plough bolts (excluding thread dimensions) used for mounting of cutting edges, end bits, bucket teeth etc. of earth-moving machinery as defined in ISO 6165 taking into consideration the interchangeability.

Annex

Shapes and dimensions of plough bolt heads having a 90° countersunk angle

(This annex forms an integral part of the standard.)

A.1 Field of application

This annex is applicable to those countries using plough bolts having a 90° countersunk angle.

A.2 Shapes and dimensions of plough bolt heads with a 90° countersunk angle

The shapes and dimensions of plough bolt heads shall be as in figure 2 and table 2.
