Ref. No. ISO 965/3-1980 (E)

Descriptors : screw threads, ISO screw threads, metric system, nuts (fasteners), screws, designation, dimensional deviations, dimensions, tolerances, dimensional tolerances.

Price based on 15 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 965/3 was developed by Technical Committee ISO/TC 1, *Screw threads*, and was circulated to the member bodies in January 1979.

It has been approved by the member bodies of the following countries :

Australia	Germany, F. R.	Norway
Austria	Hungary	Poland
Belgium	India	Romania
Bulgaria	Ireland	South Africa, Rep. of
Canada	Italy	Spain
Chile	Japan	Sweden
China	Korea, Rep. of	Switzerland
Czechoslovakia	Libyan Arab Jamahiriya	United Kingdom
Denmark	Mexico	USA
Finland	Netherlands	USSR
France	New Zealand	

No member body expressed disapproval of the document.

This second edition cancels and replaces the first edition (i.e. ISO 965/3-1973).

This International Standard is one of a number of ISO publications determining tolerances for ISO metric screw threads. The complete set is made up as follows :

ISO 965/1, *ISO general purpose metric screw threads — Tolerances — Part 1 : Principles and basic data.*

ISO 965/2, *ISO general purpose metric screw threads — Tolerances — Part 2 : Limits of sizes for general purpose bolt and nut threads — Medium quality.*

ISO 965/3, *ISO general purpose metric screw threads — Tolerances — Part 3 : Deviations for constructional threads.*

ISO/R 1501, *ISO miniature screw threads.*

ISO general purpose metric screw threads — Tolerances — Part 3 : Deviations for constructional threads

1 Scope and field of application

This International Standard specifies deviations for pitch and crest diameters for ISO general purpose metric screw threads conforming to ISO 261, *ISO general purpose metric screw threads — General plan*.

The deviations specified are derived from the fundamental deviations and tolerances specified in ISO 965/1.

2 Designation

Tolerances are designated by the relevant tolerance class as found under the heading "Tolerance class" in the tables.

Examples :

M6 – 6H

M6 – 5g6g

A fit between threaded parts is indicated by the nut thread tolerance designation followed by the bolt thread tolerance designation separated by a stroke.

Example :

M6 – 6H/5g6g

3 Remarks

For nut threads as well as bolt threads, the actual root contour shall not in any point transgress the basic profile.

The tabulated deviation values for the minor diameter of the bolt thread are calculated on the basis of an H/6 truncation and may be used for stress calculations.

For coated threads, the tolerances apply to the parts before coating, unless otherwise stated. After coating, the actual thread profile shall not in any point transgress the maximum material limits for position H or h respectively.

NOTE — These provisions are intended for thin coatings, for example those obtained by electroplating. For thicker coatings, for example those obtained by hot-dip galvanizing, special provisions are under consideration and will be added to ISO 965/1, 2 and 3.

4 Deviations

ES, es = upper deviation
EI, ei = lower deviation
