Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Amendment 1 to International Standard ISO 9832:1992 was prepared by Technical Committee ISO/TC 34, *Agricultural food products*, Subcommittee SC 11, *Animal and vegetable fats and oils*.

Annex A of this International Standard is for information only.

Results of interlaboratory test

An international collaborative test involving 21 laboratories in 8 countries was carried out using the method given in this International Standard. The collaborative test was organized by the Federation of Oils, Seeds and Fats Associations Ltd. (FOSEFA International) in 1994. The results obtained were subjected to statistical analysis in accordance with ISO 5725:1986 (now withdrawn) to give the precision data as shown in table A.1.

The collaborative test was carried out on spiked samples of soyabean and sunflowerseed oils:

Samples A to D: sunflowerseed oil
Samples E to H: soyabean oil

Table A.2 shows the expected means of the samples provided to analysts.

Table A.2 also shows the actual means obtained and the repeatability limits found by the collaborative test.

Table A.1 — Summary of statistical results
