Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Amendment 1 to ISO/IEC 23000-4:2009 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*.

Information technology — Multimedia application format (MPEG-A) —

Part 4: Musical slide show application format

AMENDMENT 1: Conformance and reference software for musical slide show application format

After Clause 10, add the following two new clauses:

11 Conformance

11.1 Introduction

The following section defines the conformance points for the file format and device.

11.2 File conformance points

11.2.1 File structure

11.2.1.1 General

Conformant files shall be readable by the MSS application format reference software player. The general file-level structure of the files shall conform to the normative file structure defined in 5.3.

11.2.1.2 List of files

Sample files	Mode types	Description
mss_basic.mp4	Basic	A conformant file shall contain one audio track with track-level metadata box containing MPEG-7 metadata, and one slide show track with track-level metadata box containing MPEG-7 metadata.
mss_enhanced.mp4	Enhanced	A conformant file shall contain one audio track with track-level metadata box containing MPEG-7 metadata, one slide show track with track-level metadata box containing MPEG-7 metadata, and one movie-level metadata box containing LAsER scene description for animation.

11.2.2 Animation

The LAsER scene description shall conform to LAsER specification as defined in 6.3.

11.2.3 Timed text

The timed text sample structure shall conform to 3GPP TS 26.245 timed text specification.

11.2.4 Metadata

Metadata shall conform to MPEG-7 MDS specification as defined in 6.5.

11.2 Player conformance points

Conformant players shall be able to read and decode files that satisfy the file conformance points defined in 7.2.

12 Reference software

12.1 Introduction

This clause provides a technical description on the structure, functionalities, and dependencies of the reference software.

12.2 Software architecture and components

The basic aim for the reference software is to provide an application that enables the user to create and play a simple Musical slide show file. AMD1.1 shows the architecture model for the reference software. The application mainly uses three different core modules (SVGApiLib, MPEG4ip, and FMOD) for creation and playback. All modules are accessed through interface classes (except for the SVG dll).
