Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

The main task of ISO/IEC JTC 1 is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is called to the possibility that implementation of this standard may require the use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. ISO/IEEE is not responsible for identifying essential patents or patent claims for which a license may be required, for conducting inquiries into the legal validity or scope of patents or patent claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance or a Patent Statement and Licensing Declaration Form, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from ISO or the IEEE Standards Association.

ISO/IEC/IEEE 8802-1Q:2016/Cor.1:2017 was prepared by the LAN/MAN of the IEEE Computer Society (as IEEE 802.1Q-2014/Cor. 1-2015). It was adopted by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 6, *Telecommunications and information exchange between systems*, in parallel with its approval by the ISO/IEC national bodies, under the “fast-track procedure” defined in the Partner Standards Development Organization cooperation agreement between ISO and IEEE. IEEE is responsible for the maintenance of this document with participation and input from ISO/IEC national bodies.

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854 USA

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under U.S. and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every ten years. When a document is more than ten years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE-SA Website at <http://ieeexplore.ieee.org/xpl/standards.jsp> or contact IEEE at the address listed previously. For more information about the IEEE SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Participants

At the time this corrigendum was submitted to the IEEE-SA Standards Board for approval, the IEEE 802.1 Working Group had the following membership:

Glenn Parsons, Chair
John Messenger, Vice Chair and Chair, Maintenance Task Group
Tony Jeffree, Editor

Christian Boiger
 Paul Bottorff
 David Chen
 Feng Chen
 Weiyang Cheng
 Rodney Cummings
 Janos Farkas
 Norman Finn

Introduction

This introduction is not part of IEEE Std 802.1Q-2014/Cor 1-2015, IEEE Standard for Local and metropolitan area networks—Bridges and Bridged Networks—Corrigendum 1: Technical and editorial corrections.

This corrigendum to IEEE Std 802.1Q-2014 corrects the small number of errors to the base text identified by the IEEE 802.1 maintenance activity. These changes are needed in order to correct technical and/or editorial errors in the existing text.

IEEE Standard for
Local and metropolitan area networks—

Bridges and Bridged Networks—

Corrigendum 1: Technical and editorial
corrections

(This corrigendum is based on IEEE Std 802.1Q™-2014.)

NOTE—The editing instructions contained in this amendment define how to merge the material contained here into the base document and its other amendments to form the new comprehensive standard.

Editing instructions are shown in ***bold italic***. Four editing instructions are used: change, delete, insert, and replace. ***Change*** is used to make corrections in existing text or tables. The editing instruction specifies the location of the change and describes what is being changed either by using ***strikethrough*** (to remove old material) and ***underline*** (to add new material). ***Delete*** removes existing material. ***Insert*** adds new material without disturbing the existing material. Insertions may require renumbering. If so, renumbering instructions are given in the editing instruction. ***Replace*** is used to make changes in figures or equations by removing the existing figure or equation and replacing it with a new one. Editing instructions, change markings, and this NOTE will not be carried over into future editions because the changes will be incorporated into the base standard.

IMPORTANT NOTICE: IEEE Standards documents are not intended to ensure safety, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

This IEEE document is made available for use subject to important notices and legal disclaimers. These notices and disclaimers appear in all publications containing this document and may be found under the heading “Important Notice” or “Important Notices and Disclaimers Concerning IEEE Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

¹Notes in text, tables, and figures are given for information only, and do not contain requirements needed to implement the standard.

```
SYNTAX      IEEE8021FqtssDeltaBandwidthValue
UNITS       "percent"
MAX-ACCESS  read-write
STATUS      current
DESCRIPTION
    "The value of the deltaBandwidth parameter
    for the traffic class.
    This value is represented as a fixed point number
    scaled by a factor of 1,000,000; i.e., 100,000,000
    (the maximum value) represents 100%.

    The default value of the deltaBandwidth parameter
    for the highest numbered traffic class that supports
    the credit-based shaper algorithm is 75%; for all
    lower numbered traffic classes that support the
    credit-based shaper algorithm the default value is 0%.
```

The value of this object MUST be retained across reinitializations of the management system."
 REFERENCE "12.20.1, 34.3"
 ::= { ieee8021FqtssBapEntry 2 }

ieee8021FqtssOperIdleSlopeMs OBJECT-TYPE

SYNTAX Unsigned32
 UNITS "bits per second"
 MAX-ACCESS read-only
 STATUS current
 DESCRIPTION

"The most significant 32 bits of the bandwidth, in bits per second, that is currently allocated to the traffic class (idleSlope(N)). This object MUST be read at the same time as ieee8021FqtssOperIdleSlopeLs, which represents the LS 32 bits of the value, in order for the read operation to succeed.

If SRP is supported and in operation, then the reserved bandwidth is determined by the operation of SRP; otherwise, the value of ieee8021FqtssOperIdleSlopeMs is equal to the value of ieee8021FqtssAdminIdleSlopeMs.

The value of this object MUST be retained across reinitializations of the management system."

REFERENCE "12.20.1, 34.3"

ieee8021SrpBridgeBaseMsrpEnabledStatus OBJECT-TYPE
    SYNTAX      TruthValue
    MAX-ACCESS  read-create
    STATUS      current
    DESCRIPTION
        "The administrative status requested by management for
        MSRP. The value true(1) indicates that MSRP should
        be enabled on this device, in all VLANs, on all ports
        for which it has not been specifically disabled. When
        false(2), MSRP is disabled, in all VLANs and on all
        ports, and all MSRP frames will be forwarded
        transparently. This objects affects both Applicant and
        Registrar state machines. A transition from false(2)
        to true(1) will cause a reset of all MSRP state
        machines on all ports.

        This object may be modified while the corresponding
        instance of ieee8021BridgeBaseRowStatus is active(1).

        The value of this object MUST be retained across
        reinitializations of the management system."

ieee8021SrpBridgeBaseMsrpTalkerPruning OBJECT-TYPE
    
```

SYNTAX TruthValue
 MAX-ACCESS read-create
 STATUS current

DESCRIPTION

"The value of the talkerPruning parameter which controls the propagation of Talker declarations. The value true(1) indicates that Talker attributes are only declared on ports that have the Stream destination_address registered in the MMRP MAC Address Registration Entries. When false(2), Talker attribute are declared on all egress ports in the active topology.

The value of this object MUST be retained across reinitializations of the management system."

REFERENCE "12.22.1, 35.2.1.4b, 35.2.4.3.1"

DEFVAL { false }

::= { ieee8021SrpBridgeBaseEntry 2 }

ieee8021SrpBridgeBaseMsrpMaxFanInPorts OBJECT-TYPE

SYNTAX Unsigned32
 MAX-ACCESS read-create
 STATUS current

DESCRIPTION

"The value of the msrpMaxFanInPorts parameter which limits the total number of ports on a Bridge that are allowed to establish reservations for inbound Streams. A value of zero (0) indicates no fan-in limit is being specified and calculations involving fan-in will only be limited by the number of MSRP enabled ports.

The value of this object MUST be retained across reinitializations of the management system."

REFERENCE "12.22.1, 35.2.1.4f"

DEFVAL { 0 }

::= { ieee8021SrpBridgeBaseEntry 3 }

ieee8021SrpBridgeBaseMsrpLatencyMaxFrameSize OBJECT-TYPE

SYNTAX Unsigned32
 MAX-ACCESS read-create
 STATUS current

DESCRIPTION

"The value of msrpLatencyMaxFrameSize parameter which is used in the calculation of the maximum latency through a Bridge. The maximum size is defined to be 2000 octets by default, but may be set to a smaller or larger value dependent on the particular Bridge configuration. This parameter does not imply any type of policing of frame size, it is only used in the latency calculations.

The value of this object MUST be retained across reinitializations of the management system."

REFERENCE "12.22.1, 35.2.1.4g"

25. Support of the MAC Service by PBBNs

25.2 Customer service interface

Change the paragraph immediately before the NOTE as follows:

In all cases, segregation of different service instances is achieved at an interface wholly under the control of the backbone provider, and by verification of customer provided parameters that provide service instance selection. Stronger authentication and authorization of the attached customer systems ~~may~~can be achieved by use of IEEE Std 802.1X.

32. Congestion notification protocol

32.14 RP procedures

32.14.4 ReceiveCnm

Change list item e) as follows:

- e) If the selected RP rate control state machine's rpEnabled variable is FALSE and is not held FALSE because rpgEnable (32.11.1) has the value FALSE, and the CNM's cnmQOffset field (33.4.5) is ~~negative~~ positive, then rpEnabled is reset to TRUE, the variable rpppCreatedRps (32.10.2) is incremented.

STANDARDSISO.COM : Click to view the full PDF of ISO/IEC/IEEE 8802-1Q:2016/Cor 1:2017

33. Encoding of congestion notification PDUs

33.4 Congestion Notification Message PDU format

33.4.5 cnmQOffset

Change the first line as follows:

The two's-complement signed integer value of ~~the transmitting CP's~~ $(-1 \times \text{cpQOffset})$ (32.8.7) ~~of the transmitting CP~~ in units of 64 octets.

STANDARDSISO.COM : Click to view the full PDF of ISO/IEC/IEEE 8802-1Q:2016/Cor 1:2017

35. Stream Reservation Protocol (SRP)

35.1 Multiple Stream Registration Protocol (MSRP)

35.1.2 Behavior of end stations

35.1.2.1 Talkers

Insert the following paragraph immediately following list item b):

A Talker Advertise shall not be declared if there are not sufficient bandwidth and resources available. If a Talker Advertise is being declared and the required bandwidth or resources become unavailable the Talker Advertise shall be withdrawn and a Talker Failed may be declared. A Talker is allowed to transition directly from a Talker Advertise to a Talker Failed without waiting for the Talker Advertise to be deregistered from the network (see 35.2.6).

35.2 Definition of the MSRP application

35.2.2 Definition of MRP elements

35.2.2.8 MSRP FirstValue definitions (stream reservations)

35.2.2.8.1 Structure definition

Change Figure 35-2 as follows:

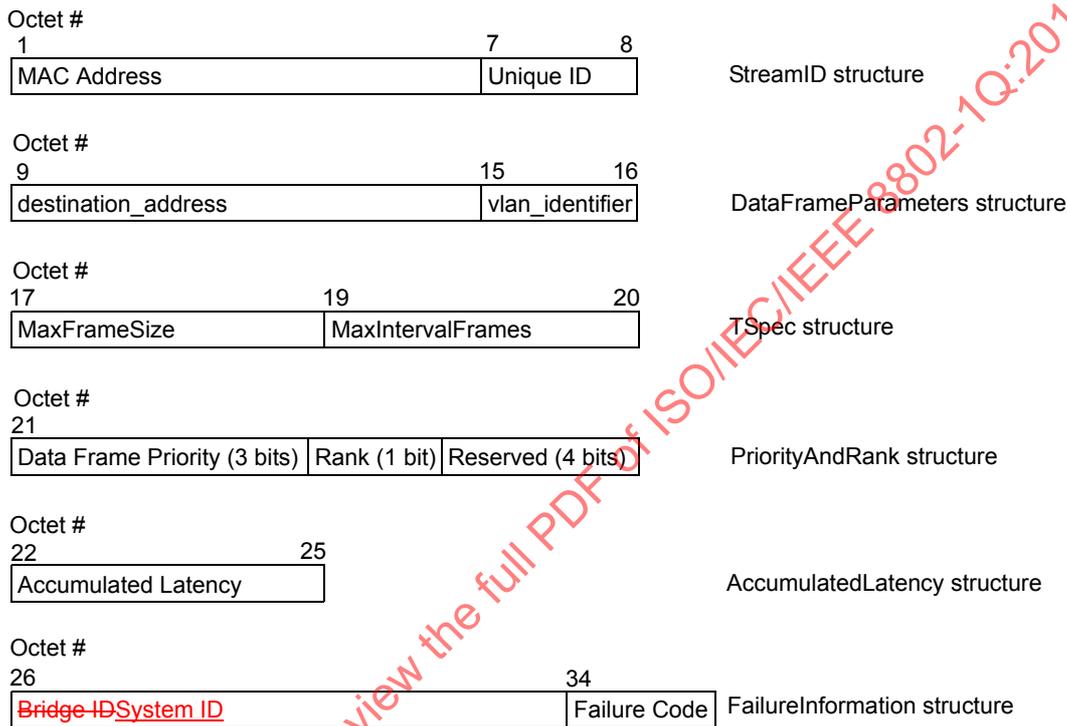

Figure 35-2—Format of the components of the reservation FirstValue fields

35.2.2.8.7 FailureInformation

Change the text of 35.2.2.8.7 and Table 35-6, and insert a NOTE, as follows:

At the point when a Talker Advertise Declaration is transformed into a Talker Failed Declaration, the Bridge system making the transformation adds information that indicates, to the Listeners registering the Talker Failed Declaration, the cause of the failure, and the identity of the Bridge system at which the failure occurred. The subcomponents of the FailureInformation include

- a) The system identifier, which is the The Bridge ID-Identifier (13.26.2) of the Bridge, or the 48-bit MAC Address of the end station’s port extended to 64-bits by prepending 16 bits of zero, that changed the Declaration Type from Advertise to Failed.
- b) The Reservation Failure Code, which is represented by a single octet containing the value shown in Table 35-6.

NOTE—Bridge Identifiers are normally constructed from MAC Addresses that are unique in the bridged LAN but are not required to be constructed in that manner; therefore, there is a possibility of an end station MAC Address colliding with the Bridge ID.

Table 35-6—Reservation Failure Codes

Failure Code	Description of cause
1	Insufficient bandwidth
2	Insufficient Bridgesystem resources
3	Insufficient bandwidth for traffic class.
4	StreamID in use by another Talker
5	Stream destination_address already in use
6	Stream preempted by higher rank
7	Reported latency has changed
8	Egress port is not AVB capable ^a
9	Use a different destination_address (i.e., MAC DA hash table full)
10	Out of MSRP resources
11	Out of MMRP resources
12	Cannot store destination_address (i.e., Bridgesystem is out of MAC DA resources)
13	Requested priority is not an SR Class (3.231) priority
14	MaxFrameSize (35.2.2.8.4(a)) is too large for media
15	msrpMaxFanInPorts (35.2.1.4(f)) limit has been reached
16	Changes in FirstValue for a registered StreamID.
17	VLAN is blocked on this egress port (Registration Forbidden) ^b
18	VLAN tagging is disabled on this egress port (untagged set)
19	SR class priority mismatch

^aA device could choose to use the asCapable variable from IEEE Std 802.1AS™-2011 [B7], 10.2.4.1, to help determine if its neighboring device is AVB capable. If the asCapable variable is FALSE for a particular port, then the neighboring device is not a time-aware system and therefore not AVB capable.

^bThis Failure Code is never declared in a Talker Failed message since Talker attributes are not propagated on egress ports that have the associated VLAN blocked. The **Bridgesystem** can still be queried by other means to learn why the Talker attribute was not declared.

Annex A

(normative)

PICS proforma—Bridge implementations²

A.37 Shortest Path Bridging (SPB)

Change row SPB-2 as follows:

SPB-2	Encode, decode, and validate IS-IS Hello PDUs or SPT BPDUs for the Agreement Protocol (AP) and support Agreement Protocol AP logic in IS-IS?	SPB:M	5.4.5, 28	Yes [<input type="checkbox"/>	No [<input type="checkbox"/>

Annex B

(normative)

PICS proforma—End station implementations

B.10 Stream Reservation Protocol (SRP)

Change rows SRP-11 and SRP-12 as follows:

SRP-11	Does the implementation update the Failure Information Bridge ID <u>end station MAC address</u> and Code in the event of insufficient bandwidth or resources through a Bridge <u>when a Talker Failed is declared</u> ?	M	35.2.2.8.7	Yes [<input type="checkbox"/>]	
SRP-12	Does the implementation create a Talker Failed in the event of insufficient bandwidth or resources through a Bridge ?	<u>M</u> O	35.2.4.3, 35.10, <u>35.1.2.1</u>	Yes [<input type="checkbox"/>]	<u>No</u> [<input type="checkbox"/>]

STANDARDSISO.COM : Click to view the full PDF of ISO/IEC/IEEE 8802-1Q:2016/Cor 1:2017

Annex D

(normative)

IEEE 802.1 Organizationally Specific TLVs

D.1 Requirements of the IEEE 802.1 Organizationally Specific TLV sets

Change row 07 of Table D-1 as follows:

Table D-1— IEEE 802.1 Organizationally Specific TLVs ~~specified in this standard~~

IEEE 802.1 subtype	TLV name	TLV set name	TLV reference	Feature clause reference
07	Link Aggregation	basicSet	D.2.7 Annex F of IEEE Std 802.1AX-2014	D.2.7, Annex F of IEEE Std 802.1AX-2008 2014

D.2 Organizationally Specific TLV definitions

D.2.7 Link Aggregation TLV

Delete D2.7, D2.7.1, D2.7.2, D2.7.3, and Table D-3, re-numbering subsequent tables and sub-clauses accordingly.

D.3 IEEE 802.1 Organizationally Specific TLV management

D.3.2 IEEE 802.1 managed objects—TLV variables

D.3.2.7 Link Aggregation TLV managed objects

Change the text as follows:

- a) **aggregation status:** The capability and current aggregation status of the link (see ~~D.2.7.1 Annex F of IEEE Std 802.1AX-2014~~).
- b) **aggregated port ID:** The aggregated port identifier (see ~~D.2.7.2 Annex F of IEEE Std 802.1AX-2014~~).

D.4 PICS proforma for IEEE 802.1 Organizationally Specific TLV extensions

D.4.3 Major capabilities and options

Change the following rows of the table, as follows:

dot1basicTlv	<p>Is each TLV in the IEEE 802.1 Organizationally Specific TLV basicSet implemented?</p> <p>Port VLAN ID TLV Port And Protocol VLAN ID TLV VLAN Name TLV Protocol Identity TLV VID Usage Digest TLV Management VID TLV Link Aggregation TLV</p>	<p>dot1basicSet:M dot1basicSet:M dot1basicSet:M dot1basicSet:M dot1basicSet:M dot1basicSet:M dot1basicSet:M</p>	<p>D.2.1 D.2.2 D.2.3 D.2.4 D.2.5 D.2.6 D.2.7 Annex F of IEEE Std 802.1AX-2014</p>	<p>Yes [] Yes []</p>
dot1cnTlv	<p>Is each TLV in the IEEE 802.1 Organizationally Specific TLV lagSet implemented?</p> <p>Link Aggregation TLV</p>	<p>dot1cnSet:M</p>	<p>D.2.7 Annex F of IEEE Std 802.1AX-2014</p>	<p>Yes []</p>
equivstor	<p>If the SNMP is not supported, is the provided storage and retrieval capability functionally equivalent with the indicated specifications of this clause for the operating mode being implemented?</p>	<p>M</p>	<p>D.2.1, D.2.2, D.2.3, D.2.4, and D.2.7 Annex F of IEEE Std 802.1AX-2014</p>	<p>Yes []</p>

D.5 IEEE 802.1/LLDP extension MIB

D.5.2 Structure of the IEEE 802.1/LLDP extension MIB

Change the following rows of Table D-12 (previously Table D-13) as follows:

Table D-12—IEEE 802.1/LLDP extension MIB object cross reference

MIB table	MIB object	LLDP reference
lldpV2Xdot1LocLinkAggTable		D.2.7 Annex F of IEEE Std 802.1AX-2014
	lldpV2LocPortIfIndex	(Table index)
	lldpV2Xdot1LocLinkAggStatus	aggregation status, D.2.7.1 Annex F of IEEE Std 802.1AX-2014
	lldpV2Xdot1LocLinkAggPortId	aggregation port ID, D.2.7.2 Annex F of IEEE Std 802.1AX-2014
lldpV2Xdot1RemLinkAggTable		D.2.7 Annex F of IEEE Std 802.1AX-2014
	lldpV2RemTimeMark	(Table index)
	lldpV2RemLocalIfIndex	(Table index)
	lldpV2RemLocalDestMACAddress	(Table index)
	lldpV2RemIndex	(Table index)
	lldpV2Xdot1RemLinkAggStatus	aggregation status, D.2.7.1 Annex F of IEEE Std 802.1AX-2014
	lldpV2Xdot1RemLinkAggPortId	aggregation port ID, D.2.7.2 Annex F of IEEE Std 802.1AX-2014

D.5.5 IEEE 802.1 LLDP extension MIB module—version 2

Replace the text of D.5.5 with the following:

In the following MIB definition, should any discrepancy between the DESCRIPTION text and the corresponding definition in D.2.1 through D.5 occur, the definition in D.2.1 through D.5 shall take precedence.

DESCRIPTION
```

```

"The LLDP Management Information Base extension module for
IEEE 802.1 organizationally defined discovery information.

```

```

In order to ensure the uniqueness of the LLDP-V2-MIB,

```

IEEE Std 802.1Q™-2014/Cor 1-2015
 IEEE Standard for Local and Metropolitan Area Networks—Bridges and Bridged Networks—
 Corrigendum 1: Technical and editorial corrections

lldpV2Xdot1MIB is branched from lldpV2Extensions using an Organizationally Unique Identifier (OUI) value as the node. An OUI is a 24 bit globally unique number assigned by the IEEE Registration Authority - see:

<http://standards.ieee.org/develop/regauth/oui/index.html>

Unless otherwise indicated, the references in this MIB module are to IEEE Std 802.1Q-2014.

Copyright (C) IEEE (2014). This version of this MIB module is published as D.5.5 of IEEE Std 802.1Q; see the standard itself for full legal notices."

REVISION "201512020000Z" -- December 2, 2015

DESCRIPTION

"Published as part of IEEE Std 802.1Q 2014 Cor-1. Updated as a result of maintenance items #0132 and #0152"

REVISION "201412150000Z" -- December 15, 2014

DESCRIPTION

"Published as part of IEEE Std 802.1Q 2014 revision. Cross references updated and corrected. New tables lldpV2Xdot1RemVidUsageDigestV2Table and lldpV2Xdot1RemManVidV2Table inserted; old versions deprecated. New versions add an index for lldpV2RemIndex. "

REVISION "201103250000Z" -- March 25, 2011

DESCRIPTION

"Published as part of IEEE Std 802.1Qaz-2011. Adds the DCBX objects to the MIB module"

REVISION "201103230000Z" -- March 23, 2011

DESCRIPTION

"Published as part of IEEE Std 802.1Q-2011 revision. This revision contains changes associated with relocating the extension MIB from IEEE Std 802.1AB to IEEE Std 802.1Q, minor tweaks to the text of the DESCRIPTION statement above to fix references to IEEE Std 802.1Q, updating of references to refer to Annex D, and addition of object definitions for Congestion Notification TLVs and corresponding compliance statements."

REVISION "200906080000Z" -- June 08, 2009

DESCRIPTION

"Published as part of IEEE Std 802.1AB-2009 revision. This revision incorporated changes to the MIB to support the use of LLDP with multiple destination MAC addresses, and to import the Link Aggregation TLV from the 802.3 extension MIB"

-- OUI for IEEE 802.1 is 32962 (00-80-C2)

    STATUS      current
    DESCRIPTION
        "This TC describes the link aggregation status.

        The bit 'aggCapable(0)' indicates the link is capable of being
        aggregated if 1, not capable if 0.

        The bit 'aggEnabled(1)' indicates the link is currently in
        an aggregation if 1, not in an aggregation if 0.

        The bits 'portTypeLS(1)' and portTypeMS(2)' form the LS
        and MS bits of a Port Type value respectively:
        00 = no port type specified
        01 = transmitted from Aggregation Port
        10 = transmitted from Aggregator
        11 = transmitted from an Aggregator with a single
            Aggregation Port.

        The remaining bits are reserved for future standardization."
