RATIONALE

AMS4475C results from a Five-Year Review and update of this specification with changes to update wording to prohibit unauthorized exceptions (see 3.7, 3.11, 4.4.1, and 8.3), Applicable Documents (see Section 2), and Ordering Information (see 8.5), relocate Definitions (see 2.4) and note relating to the statistical analysis of properties (see 3.8), and allow use of the immediate prior specification revision (see 8.4).

1. SCOPE

1.1 Form

This specification covers an aluminum alloy in the form of alclad coiled sheet from 0.010 to 0.128 inch (0.25 to 3.25 mm), inclusive, in thickness supplied in the -T4 temper (see 8.5).

1.2 Application

These products have been used typically for medium-strength parts requiring formability and maximum corrosion resistance and whose fabrication does not involve welding, but usage is not limited to such applications.

2. APPLICABLE DOCUMENTS

The issue of the following documents in effect on the date of the purchase order forms a part of this specification to the extent specified herein. The supplier may work to a subsequent revision of a document unless a specific document issue is specified. When the referenced document has been cancelled and no superseding document has been specified, the last published issue of that document shall apply.
