LABELING OF ROPS AND FOPS—SAE J1164

SAE Recommended Practice

Report of Construction and Industrial Machinery Technical Committee approved April 1977. Rationale statement available.

1. Purpose—To provide a uniform content of labels on rollover protective structures (ROPS) and/or falling object protective structures (FOPS).

2. Scope—ROPS and/or FOPS may commonly be a part of construction, forestry, mining, industrial, and agricultural machines. The label content herein should be applied to a ROPS and/or FOPS on any of these machines. See SAE J1116 for categories of machines.

3. Label Specifications

3.1 The label shall be a permanent type and permanently attached to the structure.

3.2 The label and its content shall be of a size that is legible.

3.3 The label should be located on the structure where it can be read and is protected from environmental defacing.

4. Label Content

4.1 The name and address of the manufacturer or fabricator with certification control of the ROPS and/or FOPS.

4.2 ROPS and/or FOPS model number, if any.

4.3 Machine make, model(s), or series number(s) the structure is designed to fit.

4.4 Maximum mass (weight) of machine for which the structure is certified.

4.5 List by number the SAE performance criteria met (for example, SAE J1040a, SAE J231).

4.6 A list of other performance criteria met may be included (such as ISO).

4.7 The manufacturer may include such other information as deemed appropriate, such as regulatory requirements, installation, repair or replacement information.
