Hose Assemblies, Rubber, Hydraulic, Steel Wire Reinforced—Part 2: Ordering Information			

## RATIONALE

This revision to SAE J1754-2 will add missed connector codes to Table 3, add three wire braid to Table 6, add a temperature range to Table 7, add coupling attachment codes to a new Table 8, add cleanliness codes to Table 9, update example part number coding example, and update Appendix A and B hose assembly drawings used in SAE J1754-2 for ordering information.

NOTE: This draft of SAE J1754-2 and its revisions needs to be coordinated with the adoption of FCCTC-J846-06-1, S2-J516-06-1, S2-J1754-1-05-1 and S2-J1754-3-06-1 project revisions.

### 1. SCOPE

This SAE Standard covers ordering information for steel wire reinforced rubber hose assemblies using connectors specified in SAE Standard J516 or all parts of ISO 12151 for use in hydraulic systems using petroleum based hydraulic fluids with maximum working pressures of 1.7 to 42 MPa. See SAE J1754-2, Table 8 for hose operating temperature ranges and identification codes.

NOTE: Working pressure is defined as maximum system pressure.
